

BIOL 202 : Anatomy and Physiology II

This is the second and more advanced portion of this science course on the structure and function of the human body. Through lectures, self-guided study, on-line learning and applied sessions, this course will develop the students theoretical knowledge of the structure and function of the human body inclusive of the cell, tissues, organs, organ systems and accessory structures. The student's basic understanding of the physiological processes which arise from the body's structure will develop throughout the delivery of the course. Students will learn apply their knowledge of anatomy and physiology to normal and a variety of abnormal pathological conditions that are clinically relevant in the practice of medicine.
