School of Medicine Clinical Training Student Manual

Introduction

The Clinical Training Manual serves four important functions:

- Helping students achieve the outcome objectives of the School of Medicine
- Functioning as a useful handbook to guide students through the many school and regulatory policies and requirements that characterize the clinical phase of their medical education
- Providing the major academic and policy document for our affiliation agreements with hospitals and submissions to accrediting agencies
- Serving as an initial guide for students as they plan for postgraduate training

The three sections of the Manual detail the following:

- Structure of the clinical program
- The clinical curriculum
- The relationships with affiliated hospitals and the procedures
- Rules and regulations required to function in health care settings and apply for post-graduate training in the US

This Manual has evolved over 40 years in response to accrediting agencies, residency and licensing requirements, clinical faculty input and the cumulative experience of thousands of SGU medical students who have successfully completed the clinical terms. We hope that students and faculty use this Manual to help them with both long-range educational goals and day-to-day functioning. We recommend that students read this Manual carefully and use it as a reference. This Manual is subject to change and continuously revised and updated as necessary.

Mission: The Doctor of Medicine Program

St. George's University School of Medicine provides a diverse, multicultural and international environment that empowers

students to learn the medical knowledge, clinical skills, and professional behaviors to participate in healthcare delivery to people across the world.

Dean's Welcome to the Clinical Years

An Open Letter from the Dean to Beginning Third Year Students:

You are about to enter a new, exciting and demanding phase of your education. You have had some introductory clinical experiences during the pre-clerkship years, but it is different to be immersed all day, every day, in hospital life, wearing the white coat you received on your first day in medical school. This is a significant transition and as in all transitions, some aspects will be immediately rewarding; others will require some adjustment.

In the first two years of medical school, lectures, labs and exams were scheduled to maximize the learning process. In hospitals, the needs of patients take precedence over yours; you cannot always study at the time of day you prefer; you cannot always go home when you want to; your obligation to patients and the health care team comes first. As a result, years three and four will place upon you a completely different set of demands and expectations from those you have been accustomed to until now.

During the clinical years you are still expected to give the highest priority to the acquisition of medical knowledge and performance on NBME exams. In addition, you must also now learn to conduct yourself in a professional manner as part of a health care team. This role is quite different from anything in your previous educational experience. You must begin the process of shifting your own self-image and behavior from that of a student, with the license and freedom that often entails, to a doctor with serious responsibilities. You will still be expected to do well on exams, but you will also be judged on your ability to take responsibility, to relate to and work harmoniously with professional colleagues, to exhibit maturity in the way you conduct yourself on the wards and to demonstrate that you are successfully acquiring the communication skills and behaviors needed to relate and care for patients.

Years three and four are demanding, these demands will consume almost 100 percent of your time. Your clinical supervisors must judge you on the basis of your performance as you would be judged as a practicing physician. If you are having personal problems that interfere with your ability to function as a student, you should seek immediate help. The Office of the Dean, Office of Senior Associate Dean of Clinical Studies, Dean of Students, Directors of Medical Education (DME), Clerkship Directors (CD), Faculty Advisors and Faculty are available to help to help you.

Missing a lecture during the basic sciences years was not considered a serious transgression. During your clinical years, however, missing a lecture or failing to fulfill a ward assignment will call into question your ability to accept the necessary responsibilities required of you as a physician. No unexcused absences are permitted. Permission to leave a rotation, even for a day, requires prior approval from a Clerkship Director or Director of Medical Education

Your clinical years should be an exciting experience. Your dedicated ambition to becoming a physician, your maturity, and your preparation over the last two years will enable you to handle the demands of the clinical clerkships without difficulty.

You will now begin the work for which you have been preparing for so many years. You will find it infinitely challenging and sometimes frustrating; enormously fun, but sometimes tragic; very rewarding and sometimes humbling. Make the most of it.

Marios Loukas, MD, Ph.D.
Dean, School of Medicine

Section One: Clinical Program Administration and Staff

Clinical Program Administration and Staff

SGU supports over 80 physicians, student coordinators, administrators and clinical primary advisors who are responsible for the clinical training program. This staff is based in the Office

of the Dean, Office of the Senior Associate Dean of Clinical Studies, the Office of Clinical Education Operations, the Dean of Students Office, the Office of Career Guidance, On-site Advisors, and Primary Advisors. This staff is available to help students in all aspects of their clinical studies, requirements for graduation, and academic and career advising. They also remain in frequent contact with all affiliated hospitals to coordinate the administrative details of the clinical program. The recommended means of contact with the US and the UK clinical offices is by SGU email. Announcements from the Office of Clinical Education Operations are communicated through the student's SGU assigned email account and located on the SGU Clinical portal. In addition to the above, a large number of hospital-based physicians and staff support the clinical program and students.

	Operations - UK		
Rocio Lopez Fontela	Hospital Relations Liaison		rfontela@sgu.edu

- The Clinical New Student Coordinator (CNSC) is responsible for placing clinical students into core and/or elective clinical clerkships. The main objective of the CNSC is to arrange third year scheduling so that students can complete all their third-year requirements within the first clinical year. The CNSC will serve as the transition coordinator and ensure students have a point of contact "POC" after they successfully finish term 5. The CNSC will ensure that students are scheduled to meet graduation requirements and continuously provide excellent customer service while working to overcome student issues to promote student success. The CNSC is responsible for ensuring that students schedules are updated accordingly to ensure each students enrollment status is correct.

NAME	ALPHA DISTRIBUTION	EMAIL ADDRESS
Theresa Gaynor	A, B, C, D	Clerkshipplacement@sgu.edu
Kimberly Marder	E, F, G, H, I, J, K, O	Clerkshipplacement@sgu.edu

Julie Hammer	L, M, N, P, Q, V	Clerkshipplacement@sgu.edu
Mary Kiechlin	R, S, T, U, W, X, Y, Z	Clerkshipplacement@sgu.edu

- The Clinical Student Coordinator (CSC) is for tracking each individual clinical student once they are placed for all of their core rotations. The CSC will ensure that students are scheduled to meet graduation requirements and continuously provide excellent customer service while working to overcome student issues to promote student success. The CSC has a cohort of students they work with as students are progressing into their final year of medical school. The CSC is responsible for ensuring that students' schedules are updated accordingly to ensure each students' enrollment status is correct. This includes tracking that they fulfill all graduation requirements, updating rotation schedules, monitoring enrollment status and approving all clinical evaluations.

NAME	ALPHA DISTRIBUTION	EMAIL ADDRESS
Karen Parks	A, D	Kparks@sgu.edu

Mayling Ferrer	NBME@sgu.edu

Section Two: Overview of Clinical Studies

Clinical Training Sites

St. George's University School of Medicine (SGUSOM) has provided high-quality clinical education for over 40 years. More than 70 formally affiliated teaching hospitals in the United States, and the United Kingdom provide clinical training during the clinical years.

One of the unique opportunities afforded to students at SGUSOM is the ability to experience a wide range of patients, hospital systems and even different national systems of health care. Students have the option to complete, clerkships

in the US and in the UK. During their senior year, students can elect to complete rotations not only at affiliated hospitals, including those in Grenada, but also at training hospitals out of network and internationally such as in Canada and anywhere else in the world they wish. SGU has developed "Clinical Centers", ideal for those students who prefer to complete all their clinical training in one area. These are affiliated teaching hospitals, or groups of affiliated teaching hospitals, that offer all clerkships, sub-internships and electives. Students can spend all or most of their required two years of clinical training at clinical centers. Major affiliated hospitals provide some third and fourth year rotation requirements.

Appendix "A" provides information about all clinical centers, major affiliated hospitals and limited affiliated hospitals in the US and UK. Clinical training occurs exclusively at sites participating in postgraduate training programs. Many of our affiliated hospitals and clinical centers also train medical students from UK and US medical schools.

Role of Affiliated Hospitals

A formal affiliation agreement between SGU and its affiliated hospitals and/or clinical centers exists for the purpose of establishing a clinical training program for the University's third and fourth year medical students. Clinical centers and hospitals accept qualified students into organized, patient-based teaching programs and provide additional instruction with pertinent lectures, conferences, ward rounds and seminars.

Designated hospital staff supervise the educational program and assess each student's progress towards achieving MD program outcomes during the clinical rotations there. Within the bounds of its own teaching programs, the hospital adheres to the precepts and standards of the SGUSOM teaching program as outlined and detailed in the latest edition of the Clinical Training Manual (CTM).

Based on the appropriate qualifications and recommendation from the hospital, SGUSOM appoints a Director of Medical Education (DME) who is the hospital administrator responsible for the SGU student program and is the liaison with the School of Medicine. DMEs receive formal appointments to the School of Medicine's faculty that are commensurate with their qualifications and duties. Their principal role is to supervise the clinical program and ensure its quality and its

conformity with the University's guidelines as described in the CTM and the Faculty Handbook. In summary, the DME is responsible to ensure that:

1. The faculty teaching SGU students is of high quality
2. The faculty teaching SGU students at each hospital is evaluated appropriately
3. Feedback to the faculty is timely

Numerous members of the hospital's medical staff, as well as its postgraduate trainees, play an active role in the teaching of St. George's students; many also have clinical faculty appointments at SCUSOM. This group of clinical teachers leads orientations, lectures and conferences. They conduct bed-side rounds, teach clinical skills, conduct mid-core formative assessments, keep students' records and help determine students' final grades. For the purpose of achieving uniformity in the clinical training program at different sites and University-wide integration, SGU's clinical faculty participate in the School of Medicine's ongoing educational activities, administrative meetings, and clinical department meetings.

The University has the sole and final right to evaluate the student's total academic accomplishments and make all determinations regarding promotion, retention, remediation and graduation, including granting the Doctor of Medicine degree.

All hospitals have been carefully selected to ensure their facilities meet SGU's standards. They must demonstrate a continuing commitment to medical education and furnish the necessary infrastructure to provide a successful clinical training program, which includes integrating medical students into the health care team, providing access to the hospitals' computer system and supervising involvement with patients.

Assignment of Students to Hospitals

General Comments

Students' clinical placement schedules are designed to enable students to complete their clinical curriculum within the 6-year timeline standard for completing the full MD program.

Students should not become overly concerned with clinical placements. A future career in medicine, including the ability to obtain a residency program in the US, will depend on students' academic record and personal characteristics. The particular hospital in which students train or the order in which they complete rotations are insignificant when compared to United States Medical Licensing Exam (USMLE) Step 1 and 2 performance, qualifying examinations of other countries, grades, letters of recommendation (LOR), Medical Student Performance Evaluation (MSPE), personal statements and interviews.

While the school appreciates that some assignments or schedules may be inconvenient, our priorities are assuring that all students are placed, that they are all afforded an opportunity for clinical training, and that agreements with our affiliated hospitals are fulfilled. SGU considers our hospitals substantially equivalent in terms of the educational experiences they provide. Detailed information about each hospital will not enable students to make a rational decision about whether an individual hospital is best for any individual student. In the US, the main reason for a student to choose one geographical area over another relates to convenience in terms of living arrangements or being close to home. Students have the opportunity to explain this on the Electronic Placement Information Form (EPIF).

During Term 5, the school provides a listing of geographic areas and corresponding hospitals that may be available to students for clinical placement. Students who do not start on time and take a leave of absence (LOA) will be placed based on hospital availability. However, taking an LOA instead of starting on time may be mentioned in students' transcripts and the Medical Student Performance Evaluation.

Electronic Placement Information Form (EPIF)

Students have access to the EPIF in Term 5. Placement preparation starts when students submit their EPIF with their updated permanent address, phone number, and citizenship for visa support letters, if applicable. On this form students should indicate whether US or UK placement is desired, their intended starting timeframe and if necessary, specific information regarding a special consideration. Special consideration in terms of placement includes:

- available housing near a specific hospital
- special family circumstances
- placement with specific individuals

Students can also indicate on their form that they have no particular preference. In these cases the school will place these students in an affiliated hospital. This will be arranged by the Office of Clinical Education Operations on an individual basis. Please note that although special considerations are reviewed and taken into consideration, they may not be accommodated.

US CLINICAL PLACEMENT

The placement process begins after successful completion of the basic sciences and promotion to the Clinical Program and consists of the following process:

1. Students will have to submit their USMLE Step 1 Date to Clerkship Placement.
2. One month before starting clinical training the placement coordinators email notification of each student's clinical assignment based on information provided by the student to date. This email notification does not give students permission to contact the hospital. Under no circumstances should a student arrive at a hospital until receiving a confirmation letter; to do so is contrary to school and hospital policy and, in some cases, may violate state regulations. Students assigned to a NY hospital must submit completed NYS paperwork to the Office of Clinical Education Operations. This consists of:

- NYS Application
- NYS Infection Control Certificate
- A \$20 check payable to NYSDOE

A passing Step 1 score is also required for NYS paperwork and must be submitted to ClerkshipPlacement@sgu.edu.

3. Once students receive their assignment notification, they can plan travel and housing arrangements. However, keep in mind if students change plans (e.g., postpone Step 1 or fail to meet the NYS deadlines) their assignment could change and may result in a different assignment or different start date at the same hospital. Therefore, students should consider these possible changes before finalizing arrangements and living accommodations.

THE CONFIRMATION PROCESS FOR ALL CLINICAL PLACEMENTS

As described above, students placed in NY hospitals must complete additional paperwork which will be included with their placement notification.

Once a student receives their Step 1 score, email all four pages of the Step 1 score PDF immediately to ClerkshipPlacement@sgu.edu. If the student has completed their placement requirements, the clinical new student coordinator in the Office of Clinical Education Operations will email a confirmation letter with their clinical assignments. Students will not be able to change their assignment.

The Office of Clinical Education Operations assigns all students. EPIF's are reviewed for placement purposes. Please note that students' grades, USMLE Step 1 score, or citizenship do not determine priority. The clinical placement process starts by trying to accommodate all students' geographic preferences. We will then review any special circumstances as stated in your EPIF. We do not guarantee that a student placement will be according to any of their requests. Final determination may be made by lottery.

Students who do not start when assigned by the Office of Education Operations will be referred to the Office of the Dean of Students.

After starting at a US hospital, we require students to do all third-year rotations assigned to them in that hospital program. This would include additional hospitals paired together in their assignment. Please note, once a student receives their assignment, it will be final. Please be aware that some hospitals have students complete Emergency Medicine, Family Medicine and/or a Medicine elective during their 3rd year. You will not be able to remove/cancel these from your schedule.

Your clinical new student coordinator will try to assign the majority of your third-year rotations. However, if there are any remaining third year clerkships left to schedule, your clinical new student coordinator will work with you on an individual basis. Students are not permitted to exchange assignments.

Health Requirements for Clinical Rotation

Students need a confirmed placement letter in order to start clinical training. In order for the Office of Clinical Studies to send a confirmed placement letter, students need to have all mandatory health requirements completed, documented and cleared. The Office of Clinical Studies only accepts clearance from Susan Conway, RN, Director of Student Health Records. Students must send all documents by scanning into 1-3 PDF image files and emailing to the designated clinical health form email clinicalhealthforms@sgu.edu. Students should keep the original documents; they will be required in the future for residency requirements. Fulfilling these requirements will satisfy public health and hospital regulations and is mandatory for all health care workers. Regulatory agencies have developed these regulations to protect the health of patients in the hospital as well as the health of other healthcare providers.

SGU health requirements have three parts:

Part I: HEALTH HISTORY

Students are required to complete and sign a current personal history form within six months prior to the start of clinical rotations.

Part II: PHYSICAL EXAM

Students must have a physical examination completed within six months prior to the start of their first clinical rotation. Our physical exam form needs to be filled out, dated and signed by your personal physician, nurse practitioner or physician assistant.

Tuberculosis Screening

Screening consists of a 2-step PPD test or an interferon gamma release assay blood test, e.g. QuantiFERON - TB Gold within 6 months prior to the start of their first rotation. This requirement is only for students who do not have a history of a positive PPD.

The 2 step PPD consists of 2 PPD skin test administered 1 – 3 weeks apart. The PPD must be indicated in millimeters. If you choose the IGRA test (Ex: QuantiFERON - TB Gold), a single screening will complete the TB requirements as

long as the result is negative. Students with a history of BCG vaccination or anti-tuberculosis therapy are not excluded from this requirement.

If your QuantiFERON-TB Gold is positive or your PPD is >10mm now or by history, you need not repeat these. In this case, the following statement must be signed and dated by a physician and submitted along with the official report of a recent chest x-ray. This must be done annually.

"I have been asked to evaluate _____ (student name) because of a positive PPD (>10mm) or a positive QuantiFERON - TB Gold. Based upon the student's history, my physical exam and recent chest X-ray (date < 6 months), I certify that the student is free of active tuberculosis and poses no risk to patients."

The exam and the chest x-ray should be completed within 6 months prior to the start of the first rotation.

Mandatory Immunizations

1. Serum IgG titers

Students are required to submit laboratory copies of serum IgG titers for measles, mumps, rubella, varicella and hepatitis B. If any of the measles, mumps or rubella serum IgG titers indicated non-immunity, students must submit evidence of a MMR vaccination obtained after the non-immune titer date. For a non-immune varicella titer, two varicella vaccines must be obtained at least 30 days apart after the date of the non-immune titer. If the student has received a varicella vaccines as child, that vaccine date may be used as proof of one of the two required varicella vaccines.

2. Hepatitis B

Completion of a hepatitis B vaccination as a series is a mandatory requirement. Students need to submit the dates of vaccination and the results of a serum hepatitis B surface antibody test obtained after the series was completed. If the hepatitis B titer result indicates non-immunity, students will satisfy SGU requirements by submitting proof of one additional vaccine after the titer result date. Students should also check with your personal physician who may advise further vaccines and titers.

The following vaccinations are acceptable.

1. Conventional hepatitis B vaccines include Recombivax HB and Engerix-B and require three doses over a six month period.
2. A new hepatitis B vaccine, Heplisav-B, requires two intramuscular doses given one month apart.
3. **Tdap vaccination within five years is mandatory**
4. **Completing the meningococcal form is mandatory**

Additional Vaccinations

Students should also review the health form recommendations for polio and hepatitis A vaccinations.

UK Requirements

In addition to the above, UK hospitals require the following:

1. Proof of an IPV vaccine (inactivated polio vaccine) received within the past 10 years. Students should try to get this vaccination prior to going to the UK. If they are unable, they will be able to get it in the UK for a fee.
2. When students arrive at the UK hospitals, the hospital will draw blood to test for human immunodeficiency virus (HIV), antibodies to hepatitis C (ant-HCV), hepatitis B surface antigen (HBsAg) and possibly other titers. Hospitals have the option of charging students for these tests. Students should request and save lab copies of these tests, since future hospital placements may require them

Annual Requirements

After starting clinical training, and in order to continue, students will be required to submit evidence of:

1. Tuberculosis screening every eleven months. Screening consists of a PPD skin test or an interferon-gamma release assay, blood test, e.g. QuantiFERON-TB Gold. In addition to annual TB screening, students must submit a completed self-assessment form annually which is sent to students email account.
2. Influenza vaccination every year. The vaccine changes annually and is only considered valid for one influenza season. A new vaccine is usually made available in September of

every year. Students should be vaccinated before November 1, keep written proof of vaccination and be prepared to present it to hospitals.

COVID-19 Policy for Clinical Students

All students must be fully vaccinated to rotate at all hospitals.

Currently, Pfizer, Moderna, Johnson and Johnson are accepted. Students who have been vaccinated with a brand not listed must work closely with the Office of Clinical Education Operations on confirming that the brand they received is acceptable.

Please keep records of any COVID-19 vaccination you receive. We will provide information on how to securely submit your proof of vaccination.

If you need to apply for a medical exemption, please review the following:

- [policy](#)
- [medical information release form](#)
- [medical exemption form](#)

Please submit all documentation to student studentexemptions@sgu.edu.

Students should continually check their SGUSOM email account for their score report and other information. Students who take an LOA or fail USMLE Step 1 should notify the Office of Clinical Education Operations when they intend to return from leave or pass USMLE Step 1 and are eligible to be placed into rotations. The school will place them based on hospital availability.

UK Clinical Placement

Students who wish to go to the UK for rotations should indicate that on the EPIF. The Office of Clinical Education Operations will provide additional information on UK placement. Students can start clinical training in the UK after successful completion of the first five terms and do not need to pass Step 1. The UK office will send placement confirmation notification once the requirements mentioned above are met. Based on availability, students can start clinical rotations in the UK and rotate to the US anytime with a Step 1 pass; conversely, students can start

clinical rotations in the US and rotate to the UK anytime. A visa may be required based on citizenship and the length of time in the UK.

Pre-Clerkship Web-Based Placement Requirements

1. Cultural Competency Course
2. Communication Skills Course A
3. Emergency Medicine Course
4. Infection control
5. Covid Infection Control Course

Communication Skills Modules

This module consists of 42 modules and is split between two Sakai-based Communication Skills modules. Students starting clinical training must study and pass the first web-based modules 1-12 in the Communication Skills course A to be eligible for clinical placement. The second Communication Skills course B begins at the first rotation. Each clinical department has designated modules to be an integral and required part of their rotation. Students will study the remaining modules throughout their clinical training, particularly as it relates to patients they see. Completing these courses is a requirement for graduation.

Cultural Competency Course

This is a pre-placement course designed to increase awareness of the ways culture may affect your interaction with patients. As healthcare disparities among cultural minority groups persist in our country, culturally and linguistically appropriate services are increasingly recognized as an important strategy for improving quality of care to diverse populations. This course will equip students with the knowledge, skills, and awareness to best serve all patients, regardless of cultural or linguistic background.

Infection Control Course

Infection control prevents or stops the spread of infections in healthcare settings. This course includes an overview of how infections spread, ways to prevent the spread of infections, and other recommendations to ensure student safety.

COVID Infection Control Course

This course provides information on what students rotating in facilities should be doing to identify, prepare, respond and care for respiratory virus such as the novel coronavirus. Students will learn how to identify a case once it occurs, and how to properly implement infection, prevention, and control measures to ensure there is no further transmission to self, healthcare workers and patients in the healthcare facility.

Overview of Web-based Courses

The details of the pre-clerkship requirements are found in this Manual under "I.c". Each of the clerkship requirements are included in the curriculum of each clerkship in "IV".

Communication Requirements

Students are responsible for ensuring that the SGUSOM can contact them at all times. They should notify the Office of the University Registrar of any change in contact information as soon as possible. Students must monitor their SGU email and respond to all university communications during their entire matriculation at the University; this includes during the academic terms, between academic terms, clinical rotations, while at affiliated hospitals, while on vacation or a leave of absence, during clinical bridge time, or while awaiting graduation.

Failure to monitor communications including SGU email, respond to communications, or to act on information contained in communications from the School, including failure to attend mandatory meetings as specified by the Dean of Medicine; the Dean of Students (DOS); the Sr. Associate Dean of Basic Sciences Office (DOBS); Sr. Associate Dean of Clinical Studies office; Academic Advising, Development and Support Division; Course and Clerkship Directors; Directors of Medical Education or any other administrative body or individual, is considered unprofessional behavior.

Such unprofessional behavior may have adverse effects on performance and grades and may lead to either a recommendation of dismissal from the University or an administrative withdrawal from the University.

Supervision of the Clerkships

SGU has a formal administrative and academic structure for conducting its clinical program at affiliated hospitals. A DME is on site at each clinical center and affiliated teaching hospital. The DME is a member of the SGU faculty and oversees the SGU medical student program. This includes scheduling rotations, delineating holidays and vacation time, determining the scope of student activities, dealing with student concerns and being responsible for acute medical problems that students might develop. The DME reviews regularly the overall program with the Senior Associate Dean of Clinical Studies. DME's are members of the Clinical Council, an advisory body to the Dean for the clinical terms. The DME reports to the Senior Associate Dean of Clinical Studies.

In addition to the DME, a Clerkship Director (CD) is appointed for each core rotation in which SGU students participate at each affiliated hospital. The CD is responsible administratively to the DME and academically to the appropriate departmental chair of SGU. Six clinical departments represent the six clerkship specialties. SGU appoints a chair for each of these departments responsible for the educational content of the rotation at all hospitals. The school also appoints associate chairs in the UK and elsewhere when necessary to help coordinate and supervise the educational program at all sites. Departmental Chairs and Associate Chairs as well as DMEs, CD's and others who teach SGU School of Medicine students are appointed to the clinical faculty. All clinical faculty are available to students for advice on managing their medical training and careers (e.g., choosing electives, specialties, and postgraduation training).

Site visits are made by administrative and academic members of the medical school to affiliated hospitals. The purpose of these visits is to ensure compliance with SGUSOM's standards, curriculum, and policies; to review the educational program; to elicit ideas about programmatic improvement; and to discuss any problems that arise on site. In addition to meetings with the students, the site visits can include meetings with the DME, CD and administrative staff. Each site visit results in the completion of an electronic site visit form (Appendix H). The chairs document the important features of the clerkship, including the

strengths and weaknesses of the program, feedback to the clerkship directors and suggestions for the future.

Along with the administrative staff at the affiliated hospitals, additional SGU personnel are always available through the Office of the Dean, Office of Clinical Education Operations, OCGSD and Office of Financial Aid to help improve the quality of life in and beyond the hospital setting. These personnel provide academic advice, career counseling, health and wellness support, and assistance with problems involving finances, housing and visas.

The Role of Preceptors and Clinical Faculty

The teaching cornerstone of the core rotation is the close relationship between the student and the attending physicians and/or residents who act as preceptors. Many hours per week are spent in small group discussions involving students and their clinical teachers as they make bedside rounds. Together, they discuss the patient's diagnosis, treatment, and progress.

Discussion revolves around a critical review of the patient's history, physical examination findings, imaging studies and laboratory results. The preceptors assess students' medical knowledge, clinical reasoning, clinical and communication skills and professional behavior as well as serve as role models. Related basic science background, critical thinking and problem solving are woven into the discussion of individual cases. The single most important factor that determines the educational value of the clerkship is the quality and quantity of interaction between students, residents, teaching physicians and patients.

Clinical teachers are evaluated by the Clerkship Director, their faculty peers, and students on a regular basis. The basis for student evaluation of faculty is the confidential electronic questionnaire that all students complete at the end of each core clerkship. The hospital DME, SGU Department Chairs and SGU administration have access to the students' responses, which are all confidential.

The basis for senior faculty evaluation is the ongoing process required by accreditation agencies, which includes peer review. Informal local knowledge of faculty, although difficult to formalize on occasion, forms an integral part of

faculty evaluation. Written reports of site visits by School of Medicine Chairs and Deans add a third level of evaluation.

The Clinical Clerk

Medical students are called clinical clerks in their clinical years. They enter into the health care team of postgraduate trainees, attending physicians, nurses, technicians and other health care providers and should quickly learn their role in the health care team.

An essential feature of the clerkship consists of in-depth contact with patients; students are strongly encouraged to make the most of such opportunities. Students take histories, examine patients, propose diagnostic and therapeutic plans, record their findings, present cases to the team, perform minor procedures under supervision, attend all scheduled lectures and conferences, participate in work rounds and teaching rounds with their peers and teachers, maintain a patient log and read extensively about their patients' diseases. In surgery and gynecology, attendance in the operating room is required. In obstetrics, attendance is mandatory in prenatal and postpartum clinics; obstetrical patients must be followed through labor and delivery.

Duty Hours Policy

Clinical clerks are expected to be on duty throughout the hospital workday, Monday through Friday. Evening, weekend, and holiday on-call schedules may be the same or less than those for the resident team to which the student is assigned. Student duty hours must take into account student wellness, as well as the effects of fatigue and sleep deprivation on students' education and performance. Medical students are not required to work longer hours in patient care than residents. Allowing for some modifications at different hospitals and for different cores, the average workday or week should not exceed 50 hours; 30% of this time must be protected academic time consisting of conferences and independent study. During this time students should have no patient care or health-care team responsibility.

All students during the last week of their medicine and surgery cores are to be given two days off before their NBME clinical subject exam, as well as the day of the exam. All students during their last week of ob/gyn, pediatrics,

family medicine and psychiatry rotations are to be given one day off before the exam, as well as the day of the exam. These days are protected academic time for self-study and exam preparation and considered an integral part of these rotations. While all clerkship directors must comply with this policy, they do have the option of allowing additional time off for study.

Involvement with Patients

Students are encouraged to make the most of the opportunity to learn about, learn from, and spend time with their patients. A student frequently becomes involved with a small group of patients, on average 2-4 per week. Through a detailed approach to a small number of patients students can begin to acquire an understanding of clinical problems. In addition to the initial evaluation and daily progress notes, all diagnostic and therapeutic maneuvers are closely monitored. Although a smaller group of patients are the core of the student's educational experience, exposure to a large number of other patients on a less detailed basis is also useful in broadening knowledge. The student derives considerable benefit from exposure to other students' patients who are being discussed and by being present when attending's or consultants see their own patients. The MD program curriculum includes required clinical experiences ("must see list") for the core clerkships and family medicine (General Practice in the UK) as detailed in the course syllabus. Students must account for these required clinical experiences in the electronic patient log application (see below). The clerkship director reviews the patient encounter log at the mid-core formative assessment and when completing the final clerkship evaluation form. This review assesses students' commitment to documentation as well as patient involvement. The Office of the Senior Associate Dean, Clinical Sciences also monitors each student's electronic log to ensure that the each student has seen patients required by the School of Medicine. Gaps in students' "must see list" should be filled in during other rotations or during the fourth year.

Supervision of Students

The SOM has a policy that all clinical experiences are supervised by appropriate clinical faculty. A physician, nurse or other health care provider

must be present in the room as a chaperone when students examine patients of all genders. This is especially true for examinations of the breasts, genitalia or rectum. Student orders in the chart or electronic medical records must be authorized and countersigned by a physician. Minor procedures may be performed on patients after adequate instruction has been given as permitted by hospital policy and regulations. Students working in hospitals are protected by liability insurance which is carried by SGU. Students must soon become familiar with the electronic medical record or patients' charts and know where to locate its individual components. Students are responsible for patient workups and might also write daily progress notes as stipulated by the SGU clerkship curriculum and hospital policy.

Teacher-Learner Expectations

The School holds in high regard professional behaviors and attitudes, including altruism, integrity, respect for others and a commitment to excellence. Effective learning is best fostered in an environment of mutual respect between teachers and learners. In the context of medical education the term "teacher" is used broadly to include peers, resident physicians, full-time and volunteer faculty members, clinical preceptors, nurses, and ancillary support staff, as well as others from whom students learn.

Guiding Principles

- **Duty:** Medical educators have a duty to convey the knowledge and skills required for delivering the profession's standard of care and also to instill the values and attitudes required for preserving the medical profession's social contract with its patients.
- **Integrity:** Learning environments that are conducive to conveying professional values must be based on integrity. Students and residents learn professionalism by observing and emulating role models who epitomize authentic professional values and attitudes.
- **Respect:** Respect for every individual is fundamental to the ethic of medicine. Mutual respect is essential for nurturing that ethic. Teachers have a special obligation to ensure that students and residents are always treated respectfully.

Responsibilities of Teachers and Learners

- Treat students fairly and respectfully
- Maintain high professional standards in all interactions
- Be prepared and on time
- Provide relevant and timely information
- Provide explicit learning and behavioral expectations early in a course or clerkship
- Provide timely, focused, accurate and constructive feedback on a regular basis and thoughtful and timely evaluations at the end of a course or clerkship
- Display honesty, integrity and compassion
- Practice insightful (Socratic) questioning, which stimulates learning and self-discovery, and avoid overly aggressive questioning which may be perceived as hurtful, humiliating, degrading or punitive
- Solicit feedback from students regarding their perception of their educational experiences
- Encourage students who experience mistreatment or who witness unprofessional behavior to report the facts immediately

Responsibilities of Students

- Be courteous of teachers and fellow students
- Be prepared and on time
- Be active, enthusiastic, curious learners
- Demonstrate professional behavior in all settings
- Recognize that not all learning stems from formal and structured activities
- Recognize their responsibility to establish learning objectives and to participate as an active learner
- Demonstrate a commitment to life-long learning, a practice that is essential to the profession of medicine
- Recognize personal limitations and seek help as needed
- Display honesty, integrity and compassion
- Recognize the privileges and responsibilities coming from the opportunity to work with patients in clinical settings
- Recognize the duty to place patient welfare above their own
- Recognize and respect patients' rights to privacy
- Solicit feedback on their performance and recognize that criticism is not synonymous with "abuse"

Relationships between Teachers and Students

Students and teachers should recognize the special nature of the teacher-learner relationship which is in part defined by professional role modeling, mentorship, and supervision.

Due to the special nature of this relationship, students and teachers should strive to develop their relationship to one characterized by mutual trust, acceptance and confidence. They should both recognize the potential for conflict of interest and respect appropriate boundaries.

Learning Environment Policy

In the SOM program at SGU, students learn in a variety of social, didactic, small-group, and clinical settings. The learning environment, which includes the physical, social, psychological, and cultural environment surrounding learning, is a core component of students' educational experiences. The learning environment has an important influence on the effectiveness of SGU's medical program and as such, SGU values a positive learning environment and works to identify, prevent, and remove negative influences on the learning environment. SGU does not tolerate student mistreatment, retaliation, or other negative behaviors that are prohibited in other policies (such as discrimination).

The learning environment is assessed and monitored by SGU's Learning Environment Committee (LEC). The LEC reviews anonymous, aggregate-level data on the learning environment obtained from student surveys and other sources (e.g., summative reports from Judicial Affairs) and makes recommendations to mitigate negative influences and enhance positive influences on the learning environment. The LEC reports its findings and recommendations to the Dean of the School of Medicine and shares a report of its activities with the Curriculum Committee on an annual basis.

Participation in Continuous Quality Improvement

Student feedback is critical to the continued growth of the University and its future

students. Student feedback about the quality of instruction at SGU helps to improve the education of future medical professionals. It is the professional responsibility of all students to complete evaluations for each course and clerkship. Students who fail to participate in the evaluation process are considered non-compliant and unprofessional and may be subject to disciplinary action.

SGUSOM uses an electronic questionnaire to collect student feedback on the core rotations. These questionnaires are in Appendix F and are sent automatically to each student at the completion of each clerkship. Each department has modified the questionnaire to measure the extent that a specific clerkship rotation meets the departmental guidelines and objectives. Data from these questionnaires provides documentation enabling the deans, department chairs, DME's and clerkship directors to monitor the educational program in each clerkship at each hospital based on student experience and opinion and for the curriculum committee to ensure comparability and monitor the quality of the MD program.

For students, an aspect of professional behavior requires a commitment to improve the medical school. Given the importance of student feedback, the School of Medicine only gives students credit for a core rotation and access to their evaluation after completion and submission of the relevant questionnaire. Answers are confidential. While the school can ascertain which students responded, it does not match a response to an individual student.

Section Three: Clinical Years: Medical Knowledge and Competencies

Introduction

This section describes the requirements that form the foundation of the third and fourth years (terms 6-10). These include the five core rotations, a family medicine rotation, a subinternship in a core specialty, and a medicine rotation. Students in the clinical years must continue to acquire medical knowledge as they did in their basic science years. They need to give a top priority to the end of clerkship NBME exams and, for those interested in US residency, Step 2. In addition, they must also develop the clinical skills and

professional behaviors needed to apply that knowledge to real-life care of patients or, in other words, to become clinically competent. In addition, medical knowledge, clinical skills and professional behaviors need to be integrated with the practical realities of the current health care delivery system. The successful passage of students through this learning process will enable them to transition to postgraduate trainee, independent practitioner and life-long learner.

SGU is committed to a competency-based curriculum. These competencies are detailed in Section Two. Those students who plan to undertake postgraduate training in the US should become familiar with the Accreditation Council for Graduate Medical Education (ACGME) Core Competencies.

Competency

The US Accreditation Council on Graduate Medical Education (ACGME) defines six domains thought to be useful in defining “competency”.

The six ACGME competencies are:

- Patient Care
- Medical Knowledge
- Practice Based Learning and Improvement
- Systems Based Practice
- Professionalism
- Interpersonal Skills and Communication

While these were initially developed for residency programs, in the US today competencies are used at many levels of professional practice to define and measure an individual's ability and capability. Medical schools use competency to determine suitability for graduation; residency programs use competency to certify suitability for completion and healthcare institutions use competency to determine eligibility for clinical privileges. The emphasis on achieving and demonstrating competency, a more easily quantifiable and reliable measure, replaces a more traditional model. The traditional model judges students along a qualitative continuum – generally using words like “excellent”, “good”, “needs improvement” or letter grades. It is thought that the more descriptive and quantifiable an assessment method, the more valid and reliable it is.

The American Association of Medical Colleges (AAMC) has grouped competencies into the

following 13 Entrustable Professional Activities (EPAs) as a basis for starting postgraduate training in the US.

EPAs

1. Gather a History and Perform a Physical Examination
2. Prioritize a Differential Diagnosis Following a Clinical Encounter
3. Recommend and Interpret Common Diagnostic and Screening Test
4. Enter and Discuss Orders/Prescriptions
5. Document a Clinical Encounter in the Patient Record
6. Provide an Oral Presentation of a Clinical Encounter
7. Form Clinical Questions and Retrieve Evidence to Advance Patient Care
8. Give or Receive a Patient Handover to Transition Care Responsibility
9. Collaborate as a member of an Interprofessional Team
10. Recognize a Patient Requiring Urgent or Emergent Care & Initiate Evaluation & management
11. Obtain Informed Consent for Tests and/or Procedures
12. Perform General Procedures of a Physician
13. Identify System Failures and Contribute to a Culture of Safety and Improvement.

In order to ensure that every graduate of SGUSOM is able to function at the highest possible professional level, it is necessary for us to define exactly what we mean by “competent”. Multiple models have been used to accomplish this. SGUSOM groups its competencies, or outcome objectives, into three domains – medical knowledge, clinical skills and professional behavior. The outcome objectives presented below provide an overarching guide for the curriculum.

In the following pages, seven clinical departments describe the training tasks that students undertake as they rotate through the different clerkships. It is through these tasks that students develop the competencies required by each specialty and, ultimately, required by the school for graduation. Students should become aware of the similarities and differences between the different clerkships. While medical knowledge and aspects of clinical skills differ from specialty to specialty, certainly professional behavior, interpersonal skills and communication are universal.

MD Program Objectives

Medical Knowledge

- Apply the multidisciplinary body of basic sciences to clinical analysis and problem solving using:
 - The knowledge of normal structure, function, physiology and metabolism at the levels of the whole body, organ systems, cells, organelles and specific biomolecules including embryology, aging, growth and development.
 - The principles of normal homeostasis including molecular and cellular mechanisms.
 - The etiology, pathogenesis, structural and molecular alterations as they relate to the signs, symptoms, laboratory results, imaging investigations and causes of common and important diseases.
- Incorporate the impact of factors including aging, psychological, cultural, environmental, genetic, nutritional, social, economic, religious and developmental on health and disease of patients as well as their impact on families and caregivers.
- Utilize the important pharmacological and non-pharmacological therapies available for the prevention and treatment of disease based on cellular and molecular mechanisms of action and clinical effects. Identify and explain factors that govern therapeutic interventions such as clinical and legal risks, benefits, cost assessments, age and gender.
- Apply the theories and principles that govern ethical decision making in the management of patients.
- Evaluate and apply clinical and translational research to the care of patient populations.

Clinical Skills

1. Communicate effectively with patients, their families and members of the health care team.
2. Obtain a comprehensive and/or focused medical history on patients of all categories.
3. Perform physical and mental status examinations on patients of all categories appropriate to the patient's condition.
4. Document pertinent patient health information in a concise, complete and responsible way. Select appropriate

investigations and interpret the results for common and important diseases and conditions.

5. Recognize and communicate common and important abnormal clinical findings.
6. Develop a problem list and differential diagnosis based on the history, physical finding and initial investigations.
7. Apply effective problem solving strategies to patient care.
8. Perform routine and basic medical procedures.
9. Provide patient education for all ages regarding health problems and health maintenance.
10. Identify individuals at risk for disease and select appropriate preventive measures.
11. Recognize life threatening emergencies and initiate appropriate primary intervention.
12. Outline the management plan for patients under the following categories of care: preventive, acute, chronic, emergency, end of life, continuing and rehabilitative.
13. Continually reevaluate management plans based on the progress of the patient's condition and appraisal of current scientific evidence and medical information.

Professional Behavior

1. Establish rapport and exhibit compassion for patients and families and respect their privacy, dignity and confidentiality.
2. Demonstrate honesty, respect and integrity in interacting with patients and their families, colleagues, faculty and other members of the health care team.
3. Be responsible in tasks dealing with patient care, faculty and colleagues including health- care documentation.
4. Demonstrate sensitivity to issues related to culture, race, age, gender, religion, sexual orientation and disability in the delivery of health care.
5. Demonstrate a commitment to high professional and ethical standards.
6. React appropriately to difficult situations involving conflicts, nonadherence and ethical dilemmas.
7. Demonstrate a commitment to independent and lifelong learning including evaluating research in healthcare.
8. Demonstrate the willingness to be an effective team member and team leader in the delivery of health care.

9. Recognize one's own limitations in knowledge, skills and attitudes and the need for asking for additional consultation.
10. Participate in activities to improve the quality of medical education, including evaluations of courses and clerkships.

The Clinical Curriculum

The clinical years of the SGU curriculum aim to transform students who have learned the basic sciences into students who can deal with patients and their problems in a hospital or outpatient clinic. To do this, numerous new clinical skills, professional behaviors and considerable medical knowledge must be added to that which the student has previously acquired. The clinical years in this way prepare students for postgraduate training.

The vast amount of required knowledge and the ever-accelerating rate of discovery reinforces the notion that the practicing physician must forever be a student of medicine and a continual learner. Knowledge includes the development of efficient methods for the acquisition, interpretation and recording of patient information and a systematic approach to patient care. This provides a framework on which to arrange rapidly changing and increasingly detailed medical information.

The 80 weeks of the clinical curriculum encompass 42 weeks of core rotations, 12-14 weeks of additional required rotations, and 22-24 weeks of electives.

The core rotations define the third year of medical school and include 12 weeks of internal medicine, 12 weeks of surgery and six weeks each of pediatrics, obstetrics/gynecology, psychiatry and, frequently, family medicine/general practice. (Students who do not complete family medicine in the third year must do so in their fourth year). The third year is a structured educational experience that is similar for all students. The Office of Clinical Education Operations along with the affiliated hospitals manages the scheduling of the third year.

The fourth year consists of four weeks of family medicine/general practice (if not done in the 3rd year), four weeks of a sub-internship, four weeks of an internal medicine rotation, and 22-24 weeks of electives of student choice. Each student can

schedule the fourth year based on individual educational interests and career choice and are encouraged to consult an advisor when doing so.

There is no optimal sequence of core rotations. They are generally completed before taking sub-internships and electives. On occasion, a hospital may schedule a primary care rotation or elective anytime in the third year. The listing below does not indicate the sequence of courses. Core rotation schedules are determined by the hospital and the Office of Clinical Education Operations.

Core Rotations	Weeks
Internal Medicine	12
Obstetrics and Gynecology	6
Pediatrics	6
Psychiatry	6
Surgery	12
Additional Requirements	
Family Medicine	4--6
Sub-Internship (any core specialty)	4
Internal Medicine Required Rotation	4
Electives	24 - 26
Total	80

Please note that all core rotations, as well as Family Medicine, the Internal Medicine required rotation and the sub-internship in any of the core rotations (Internal Medicine, Obstetrics and Gynecology, Pediatrics, Surgery, or Psychiatry) must be done at an affiliated hospital.

Emergency Medicine and Family Medicine do not qualify for the sub-internship graduation requirement. However, it will count as elective credit.

Year Four of the MD Program

This portion of the clinical program has five main goals:

1. To broaden and deepen clinical education after the core rotations
2. To continue clinical experience at a higher level involving more responsibility
3. To develop clinical competence within the training standards of an approved residency program in order to facilitate acceptance into a postgraduate training program
4. To choose a group of electives that best serves the academic needs of the student and is suitable for the student's career choice

5. To correct any deficiencies or unsatisfactory performances identified by the APRC in order to meet graduation requirements (see below).

Sub-internships and electives at clinical centers or other affiliated hospitals with appropriately related postgraduate programs can be arranged by the Office of Clinical Education Operations or by the DME at any hospital.

Many electives are offered by clinical centers and affiliated hospitals; these can be found on the SGU Clinical Portal. As a general rule, all electives should be at least four weeks long. Elective rotations must be taken only on services that are part of a postgraduate training program.

University policy allows students to enroll in up to 12 weeks of elective rotations in out of network hospitals. In every instance in which a student seeks to take an elective outside the SGU network, students must follow the process of submitting a "Single Elective Affiliation Agreement: located on the SGU Clinical Portal. The Office of Clinical Education Operations reviews all requests. No credit will be granted retroactively if approval is not obtained beforehand.

Licensure requirements in the US vary from state to state and from year to year. A few states currently do not accept clinical training in hospitals that are not part of the SGU network. Students who know their destination should verify the licensure laws and regulations in this regard with the specific national or state licensing agency. Those who wish to practice medicine outside the US should verify the licensure requirements of the relevant country.

SGU's medical malpractice insurance policy covers its students in healthcare facilities throughout the US, UK, Canada and the Caribbean. Other jurisdictions are available on an individual basis by application.

SGU students need to be part of the community of scholars and professionals who have gone before and will come after. In order to best serve the school's student body and aid students in career placements, SGU needs information on students' successes and achievements after graduation. SGU expects students to respond to these queries for information before and after Graduation.

Independent Study and Lifelong Learning

In order to become life-long learners, students must develop skills for self-directed learning, an essential task of medical student education. Before starting a clerkship, a student should ask and be able to answer the questions, "What should I learn in this clerkship?" and "How will I learn it?" In general, the answers to these questions will be found in multiple domains: medical knowledge, clinical skills and professional behaviors. Knowledge will be acquired during didactic activities, such as general and patient-specific reading, Firecracker study schedule, lectures, conferences, etc. To guide students, this section provides lists of specific core topics that should be learned during the clerkships and web-based educational programs that students must complete.

In addition, students must maintain an electronic patient encounter log (PEL) for required clinical experiences. The PEL contains a clerkship specific "must see list" of symptoms and diseases that the faculty feels students should become familiar with. Students must also recognize different categories of diseases. These include the important aspects of preventive, emergency, acute, chronic, continuing, rehabilitative and end-of-life care. Clinical skills and professional behaviors will be developed during supervised and observed patient encounters and during interaction with senior physicians, everywhere that care is delivered. Measurement of the student's medical knowledge, clinical skills and professional behavior against defined benchmarks determines the student's progress through the academic program. Importantly, the patients that students see and document in the patient log should form the basis for active and independent learning. In this patient-centered process students should develop the ability to independently identify, analyze and synthesize relevant information. Students should also strive to critically appraise the credibility of information sources they use. These competencies will be evaluated during discussions about patients at the bedside and in conferences and as part of students' write-ups. Each student's log becomes part of each student's performance evaluated at the end of clerkship.

Each of the core clerkships have required web-based courses and quizzes that students must complete during the rotation. The courses consist of the:

1. Firecracker curriculum
2. USMLE World assigned questions
3. Communication Skills Course required modules
4. Ethics Modules and Quizzes
5. I-Human Modules

The University has purchased subscriptions to each of the above web-based resources for all clinical students. These resources promote independent study and deepen students' understanding of the clerkship. In addition, these courses will also help students prepare for the NBME clinical subject exam and Step 2.

Required Web-Based Modules

Each clerkship has required web-based modules that students must complete. These modules fall into three groups:

1. Communication skill modules
2. Ethics Modules (Appendix L)
3. Geriatrics (not required in all cores)

In addition to the web-based modules associated with the clerkships, students must also complete the following graduation requirements:

1. Pain Management Sakai Module
2. Remainder of Communication Skills Modules

Communication Skills

The basic science and clinical faculty at SGUSOM have identified competency in communication as a critical clinical skill that students must develop during medical school. As part of SGU's educational program, communication skills are a major outcome objective that defines a graduate of SGU.

Formal training of communication skills starts in the basic science terms. On clinical rotations

extensive but informal exposure to communication skills occurs as students listen to residents and senior physicians.

In addition, the school has purchased a library subscription to a web-based communication skills course developed by Drexel University College of Medicine called "doc.com: an interactive learning resource for healthcare communication." This course is available to all students at no cost and can be accessed through Sakai. This course and the related exam (discussed below) will be the basis of formal communication skills training and assessment for medical students during their clinical years. The course consists of 42 modules. Students starting clinical training must study and pass a web-based exam on modules 1-12 to be eligible for clinical placement. Students should study the rest of the modules throughout their clinical training, particularly, as it relates to patients they see. In addition, each of the clinical departments has designated the following modules to be an integral part of their rotation:

- Internal Medicine – Modules 33 Giving Bad News & 32 Advance Directives
- Surgery – Modules 17 "Informed Decision-Making" & 35 "Discussing Medical Error"
- Psychiatry – Modules 13 "Responding to Strong Emotions" & 15 "Cultural issues In the Interview"
- Pediatrics – Modules 21 "Communication and Relationships with Children and Parents" & 22 "The Adolescent Interview"
- Ob/Gyn – Modules 18 "Exploring Sexual Issues" & 28 "Domestic Violence"
- Family Medicine – Modules 25 "Diet/Exercise" & 29 "Alcoholism Diagnosis and Counseling"
- Emergency Medicine – Modules 33 "Giving Bad News" & 38 "Communication within Health Care Teams"

In addition to the above assignments students must complete all remaining modules. These remaining modules do not have to be done at one time. Students can work at their own pace. As a **graduation requirement**, students must complete all 42 modules. (See Appendix K)

Required Clinical Experiences and the Electronic Patient Encounter Log

All students must keep a daily electronic log of required clinical experiences encountered during their clinical rotations. The log centers around required clinical experiences (a “must see list”) developed by the faculty and part of the course syllabus. This log is web-based and accessed through “the SGU portal” (details below). The log contains multiple fields that students must complete for each patient encounter: rotation, hospital, date, chief complaint, primary diagnosis, secondary diagnoses, clinical setting, communication course chapters, level of responsibility and category of illness. The log also has a form upload feature and an optional comment section. Students can use the form upload feature for required case write-ups and other required forms (ex. Direct observation form, Preventative FM Visit form) Once the forms are uploaded they are displayed on the student final evaluation for the Clerkship director to view. The optional comment section to note relevant cultural issues, documenting a SOAP note, procedures or medical literature relevant to the patient. We recommend that the log be kept current on a daily basis. This log serves multiple functions and, as discussed below, will be used in different ways and for different purposes by students, by the clinical faculty at affiliated hospitals and by the Office of the Dean. Students must remain HIPAA compliant by not using any patient identifiers, such as names, initials, date of birth, medical record numbers, pictures or other identifying information.

Rationale for the patient encounter log

During the clinical years students need to develop the clinical competencies required for graduation and postgraduate training. These competencies are assessed in many different ways: by faculty observation during rotations, by communication skills assessments, by completion of web-based assignments and by NBME clinical subject exams. In order to develop many of these competencies and meet the objectives required for graduation, the school needs to ensure that each student sees enough patients and an appropriate mix of patients

during their clinical terms. For these reasons, as well as others discussed, below the school has developed this log.

One of the competencies that students must develop during their clinical training involves documentation. Documentation is an essential and important feature of patient care and learning how and what to document is an important part of medical education. Keeping this log becomes a student training exercise in documentation. The seriousness and accuracy with which students maintain and update their patient log will be part of their assessment during the core rotations. In terms of the log, how will students be assessed? Not by the number of diagnoses they log, but by the conscientiousness and honesty they exhibit documenting their patient encounters. All of these features of documentation – seriousness, accuracy, conscientiousness and honesty – are measures of professional behavior.

Definition of a patient encounter

Students should log only an encounter with or exposure to a real patient. Simulated patients, case presentations, videos, grand rounds, written clinical vignettes, etc. should not be logged even though they are all important ways to learn clinical medicine. Many of these educational experiences, along with self-directed reading, are necessary preparation for USMLE Step 2 and postgraduate training. This log, however, focuses on a unique and critical component of clinical training, namely, involvement with “real” patients. Student involvement with patients can occur in various ways with different levels of student responsibility. The most “meaningful” learning experience involves the student in the initial history and physical exam and participation in diagnostic decision making and management. A less involved but still meaningful encounter can be seeing a patient presented by someone else at the bedside. Although the level of responsibility in this latter case is less, students should log the diagnoses seen in these clinical encounters. Patient experiences in the operating or delivery room should also be logged.

For students

- The lists of symptoms (chief complaints) and diagnoses serve as guidelines for the types of patients the clinical faculty think students should see over two years of clinical training.

The clinical faculty feels that students should have clinical exposure to about 50 symptoms (chief complaints) and about 180 diagnostic entities. These lists can also serve as the basis for self-directed learning and independent study in two ways:

- If students see a patient and enter that patient's primary and secondary diagnoses in the log, they will be expected to be more knowledgeable about these clinical entities and to do additional reading about them, including some research or review articles. If relevant, students can study and log a communication skills module.
- If, at the end of a clerkship or FM, students discover they have not seen some of the clinical entities on the required list during the core rotations, they can view the virtual links provided in Sakai and enter them in the log as a virtual encounter. Students are also told to see these required encounters in the fourth year.
- The different fields in the log should stimulate students to look for and document the complexities of clinical encounters when appropriate. Many patients present with multiple medical problems. For example, an elderly patient admitted with pneumonia (primary diagnosis) may also have chronic lung disease, hypertension and depression (secondary diagnoses). The patient may have fears about death that need to be discussed. We hope by keeping the log students will develop a more profound understanding of many patient encounters.
- Students may, and many times should, review and edit the log (see "Instructions to access and use the log" below). The original entry might require additions if, for example, a new diagnosis is discovered, the patient moves from the ED to the OR to the wards or a patient presenting with an acute condition deteriorates and presents end-of-life issues. These developments require a return to the original entry for editing.
- The chief complaint and diagnosis lists do not include every possible diagnosis or even every diagnostic entity students must learn about. The list reflects the common and typical clinical entities that the faculty feels SGU students should experience. The same list of diagnoses is presented in two ways - alphabetically and by specialty. Both

lists contain the same diagnoses and students can use whichever one is easier. If students encounter a diagnosis not on the list, they should choose the most related diagnosis from the list. By looking at "standard" diagnoses, the school can monitor the overall clinical experiences students are having at different affiliated hospitals.

- Students must learn more than they will experience during clinical rotations. The log does not reflect the totality of the educational objectives during the core clerkships. Clinical experience is an important part, but only a part, of clerkship requirements. Students need to commit themselves to extensive reading and studying during the clinical years: "Read about patients you see and read about patients you don't see".
- The NBME Clinical Subject Exams at the end of the clerkship are not based on the log but on topics chosen by the NBME.
- We encourage students to maintain this log throughout their 80 weeks of clinical training. The University requires that the logs be formally evaluated only during the clerkships. However, the list reflects those entities the faculty thinks students should encounter during their entire clinical experience in medical school, not just during the clerkships. The Office of the Dean monitors student logs throughout the clinical terms to assure compliance with the required encounters.

Instructions to students for access and use of the Patient encounter log system

To access your electronic patient log, click My SGU on the main SGU website page, www.sgu.edu, and log onto the SGU Member's center. The link to the Patient Encounter Log is found in the **SOM Clinical Studies** section. Clicking on this **Patient Encounter Log** link will take you to the sign in and then the Main Menu. From this menu, you can perform the following actions:

- Enter a new patient encounter
- Review or Edit my encounter logs

When you select **Enter a new patient encounter**, you will see pull down selections for all of the fields except "Comments". Make your selections and click **Submit My Log**. Entry in all of the fields is required.

The main menu selection **Review or Edit your encounter logs** will take you to a screen which lists all of your logs. Select the one you'd like to see or change. The **Edit This Log** button will allow you to make changes to the individual log.

If a printed copy is requested, Select **print your logs** from the menu to prepare a printer-friendly formatted table of your logs. Select the logs to include for printing and click **Print Selected Logs**. On the next page, click **Print this Page** to receive your output. Bring this printed record to the mid-core evaluation. Each student's log becomes part of the final clerkship evaluation form for the clerkship director to review and include in the final grade.

Assessment of Required Clinical Experiences and the Electronic Patient Encounter Log

1. Hospital Oversight

A clerkship director or faculty member reviews and evaluates students' logs as part of the mid-core and final assessment. During the mid-core formative evaluation the faculty member can comment on the completeness of the log and also ascertain whether students are seeing a variety of clinical patient encounters. Students with relatively insufficient entries are either not involved in the rotation or did not take the log assignment seriously. In either case, such deficiencies may impact the grade students receive in Professional Behavior. Since students are responsible for answering questions about the entries in their log, students should not log cases they have not seen and studied. The clinical faculty and departments can use the collective data in the students' logs to evaluate their own program and the extent it offers students an appropriate clinical experience.

2. Central Oversight

Because of its web-based structure, all entries into the log are electronically submitted to the school and reviewed in the Office of the Dean. The Office of the Dean collects, collates and analyzes logs from all of the students and uses this data in two ways:

1. To monitor and evaluate the clinical experience at different hospitals. In this way, the central administration of the school will

be able to answer questions, for example, "Have all of our students seen appendicitis? Have they all seen a patient with schizophrenia? Do all of our affiliated hospitals expose our students to end-of-life issues? Are all students involved in communication with children and parents?" With the data from these logs we can document for ourselves, the faculty and the student body that all of our clinical training sites provide relevant and comparable patient experiences.

2. To review the patient log of every clinical student that has completed their clerkship year. Students who have gaps in their clinical experience can be identified. This has been made possible by asking each of the clinical departments to provide quantified criteria for the types of patients on the "must see list". The Office of the Dean will then notify students identified in this way and point out the deficiencies in their clinical experience. Students will then be required to correct this deficiency by scheduling an appropriate 4th year elective.

Manual Skills and Procedures

All students need to demonstrate competency in performing four core procedures on completion of medical school in order to provide basic patient care. These procedures include:

- Basic Cardiopulmonary Resuscitation (CPR)
- Bag and Mask Ventilation
- Venipuncture
- Inserting an Intravenous Line

Competency in CPR and bag and mask ventilation should be developed during the basic science years. In addition, students need to be certified in order to perform venipuncture (drawing blood) and IV insertion. This certification needs to be documented in the Patient Encounter Log under procedures (ex. Procedure - Intravenous Insertion). Students must name the physician that certified them (in the comment section) and the date of certification. This certification needs to be done only once and can be done on any service during any rotation. However, the surgery clerkship takes the primary responsibility for this certification. Once certified, students can

continue to perform these procedures without additional documentation but always under supervision.

Students should become familiar with other procedures and surgeries and are encouraged to observe or participate in as many as possible. Faculty can certify students in any number of other procedures. This documentation does not have to be sent to the medical school but must be kept by the medical student. All procedures performed by medical students must be done under faculty supervision.

Demonstrating competency in manual skills requires more than just developing a technical skill. A number of overlapping functions contribute to this professional activity. The following is from the AAMC Core Entrustable Professional Activity Curriculum referring to procedures:

- Demonstrate the technical (motor) skills required for the procedure
- Understand and explain the anatomy, physiology, indications, risks, contraindications, benefits, alternatives, and potential complications of the procedure
- Communicate with the patient/family to ensure pre-and post- procedure explanation and instructions
- Manage post-procedure complications
- Demonstrate confidence that puts patients and families at ease

Reading and Web Based Education Resources

Reading

The importance of reading and studying in the clinical years is paramount. Students need to focus their reading in three areas:

1. Students must read and study about their patients' problems they are seeing. The chief advantage of this method is that it gives the student a story and a face with which to associate the facts about a given condition. Most students find that they retain more of their reading when they can employ a framework of personal experience. Above all, this approach emphasizes that reading supplements clinical experience. Detailed reading about patients' problems can lead to better patient care. Comprehensive textbooks, specialty books, subspecialty books, medical journals and on-line references help students prepare for patient

presentation on teaching rounds and conferences and enhance the student's knowledge base. Students are required to do computer searches in order to find the latest evidence to support a diagnosis or a treatment. Such searches provide excellent sources for obtaining leads to appropriate current references. It is rather easy to get lost in these copious indices unless one knows exactly what to look for. Thus, it becomes critical to precisely define the questions regarding each patient and then find the answers to these questions in the medical literature. Students who read about their patients become more involved in-patient care and develop problem-solving skills and clinical judgement. These are skills needed for the NBME exam and patient care.

2. Students are recommended to read a concise textbook from "cover-to-cover" to learn the extent and breadth of the clerkship specialty. This is particularly important since students will not see all of the important and major disorders of any specialty within a six or 12-week rotation. If reading selections are solely determined by their patients' problems, students are limited by the number and variety of their cases. Understanding of each specialty must go beyond the patient experience on the wards and in the clinics. Reading a concise textbook also helps to assure a uniform background in medical studies at different affiliated hospitals.
3. Students must read to prepare for the end-of-clerkship NBME examinations, which primarily assess medical knowledge. The faculty have significantly weighted these examinations to be incorporated into the final clerkship grade to emphasize the importance of medical knowledge and test-taking skills during the clerkships. Furthermore, the mean across the 6 NBME examinations also correlates with USMLE Step 2 performance, which is important for obtaining a US residency. To do well on the NBME clinical subject exams and Step 2 CK requires a prodigious amount of reading, studying and practicing questions. To assist with third year demands to do well on written examinations, SGU provides two web-based resources, UWorld and Firecracker, to improve test-taking ability and medical knowledge. The Office of the Dean monitors students' performance on these programs to provide feedback to the

clerkship directors and to assess students' professional behavior. A key component of professional behavior is the commitment to complete assignments and to strive for excellence in medical knowledge.

Required Web-Based Activities

Completion of a number of web-based activities and modules are part of the educational requirements during clinical rotations. These requirements give structure to protected academic time and independent learning. For this purpose the SOM makes available a number of web-based educational resources on SGU's on-line course management system (Sakai). Each core clerkship as well as family medicine have corresponding web-based activities that students must complete.

USMLE World

During the first week of their first clerkship students will receive an email from USMLE World with instructions on how to access this question bank. Students must complete all the questions in Ob/Gyn, Pediatrics, Psychiatry and Surgery and a minimum of 600 questions in Internal Medicine during the corresponding clerkship.

The questions are separated into subjects as follows:

Subject	Number of questions
Internal Medicine	600
Ob/Gyn	205
Pediatrics	304
Psychiatry	150
Surgery	155

Firecracker

Firecracker is an adaptive software program designed to distribute core specific curriculum. Students should note the following:

- Before any core clerkship and family medicine, students must log into the core clerkship Sakai page (ex. Internal Medicine, Pediatrics, Obstetrics, Surgery, Psychiatry, Family Medicine) and sign up for Firecracker in order to access required weekly quizzes.
- The Firecracker sign up is essential for the proper deployment of the weekly quizzes and curriculum.

- Students are also responsible to notify Firecracker one week before each clerkship change including the correct dates of the rotation.
- A failure on the student's part to notify Firecracker of the clerkship change will cause incorrect quiz deployment and will result in missed quizzes.
- This adaptive software program is designed to track individual student participation and progress. Students will mark topics in the Firecracker software each week using the clerkship Sakai Firecracker calendar topics as a guide and use the flashcard exercises during down time (within the clinical sites) for high yield topic introduction.
- The program deploys a daily curriculum to each student with a required weekly quiz to assess the prior week's calendar topic knowledge retention.
- Students then will practice the solve case questions for each topic (these are Uworld and USMLE NBME like clinical vignette questions (see below)). The software uses flashcards, solve case questions, quizzes, and practice NBME questions to assess medical knowledge.
- The software identifies individual strengths and weaknesses with an algorithmic process to improve medical knowledge and retention.
- The more a student uses the Firecracker software the more accurate the program can predict weak topics and exam readiness (NBME and CK preparedness).
- Missing required Firecracker quizzes will negatively impact a student's professional behavior grade on their final evaluation.

Firecracker

Section Four: Academic Progress

Promotion and Graduation Progression Requirements – Year 2 to Year 3

To successfully progress from the Year 2 of the MD Program (Basic Sciences) to Year 3 of the MD Program (Clinical Studies), students must have met the following requirements:

Administrative Requirements:

Students must complete the following administrative requirements in order to be cleared to start rotations:

- Be in financial good standing
- Have health insurance.
- Have their St. George's University School of Medicine (SGUSOM) health forms cleared by the department of Student Health Records Management
- Submit for a criminal background check
- Affirm to reading the Clinical Training Manual
- Complete any certification courses or paperwork required by the state where the clerkship is undertaken (i.e. New York state training in Infection Control)

Academic Requirements:

Students must complete the following academic requirements in order to be cleared to start rotations:

- Complete all Basic Sciences requirements in accordance with the standards for academic progress
- Cultural Competency review course
- Communication Skills Course A
- Emergency Medicine Course
- Infection control
- COVID Infection Control Course
- Complete all requirements of the Transition to Clinicals Course

Progression Requirements for Year 3 to Year 4

To successfully progress from Year 3 to Year 4, students must be in good academic standing and have met the following requirements:

- Complete all Basic Sciences requirements in accordance with the standards for academic progress
- Complete 42 weeks in 5 core clinical rotations in accordance with standards for academic progress
- Pass all core clerkship NBME clinical subject exams.
- Make progress toward completing the MD program within the 6 year maximum allowable timeline.

c. Timeline Requirements:

Students must adhere to the following timeline requirements:

- Complete the MD program within 6 years of matriculation
- Complete all Basic Sciences requirements within 3 years of matriculation
- Those students who have used the 3 year maximum timeline to complete the Basic Sciences, must start their first core clerkship within 6 months of completing the Basic Sciences (3.5 years from matriculation). This 6 month period is considered to be time "borrowed" from the 3 year maximum allowed to complete the two years of Clinical Studies.
- Students who take more than three years to finish basic sciences, must start core rotations immediately upon completing term 5. This means that students who plan to take the USMLE Step 1 examination must do so at the end of their core clinical rotations. Currently these rotations can only be offered in the UK.
- Those students who have been granted special permission by the CAPPs to exceed the maximum timeline must immediately start their first clerkship upon completing the Basic Sciences.
- The Clinical Segment extends over two years and five consecutive terms. Students must meet all graduation requirements within six years of matriculation.

Failure to complete meet these requirements can result in a recommendation for dismissal.

Requirements for Graduation

The Graduation Assessment Board (GAB), comprising of School of Medicine Faculty, reviews and approves those students for graduation who have completed the curriculum and met all program requirements. To be eligible for graduation, a student must satisfactorily complete 80 weeks of clinical training after the successful completion of the 77 weeks of Basic Sciences. Based on assessments throughout the Four-Year MD Program, the School of Medicine graduates those students that have developed the competencies articulated in the MD Program Objectives.

The Graduation Assessment Board (GAB) has the final authority to approve students for graduation. To be eligible for graduation a student must satisfactorily complete 80 weeks of

clinical training, pass all clerkships and electives and all components of every clinical evaluation as well as the 6 required NBME clinical subject examinations. SGUSOM graduates those students that have successfully met SOM progress, promotion, and graduation standards; thereby achieving the MD program objectives and developing the competencies necessary to engage in the practice of medicine

In order to qualify for graduation from the MD Program, all candidates must have achieved the following:

- Satisfactory completion of all Basic Sciences requirements of the MD Program and all requirements to enter the first year of Clinical Studies
- Successfully complete 80 weeks of clinical studies:
 - 42 weeks of core clerkship requirements (twelve weeks of Internal Medicine, twelve weeks of Surgery and six weeks each of Pediatrics, Obstetrics/Gynecology, and Psychiatry)
 - 6 weeks of Family Medicine (if scheduled in Year 3*) or 4 weeks of Family Medicine (if scheduled in Year 4)
 - 38 weeks of elective rotations (*less 6 weeks if Family Medicine was completed in Year 3) completed in Year 4. (four weeks of Family Medicine if not done in the 3rd year, four weeks of a sub-internship in any core specialty, four weeks of a medicine elective and 22-24 weeks of electives of student choice.
- Complete additional training and assessment for any failing grade in a course or for any failed component of a clinical rotation (including retaking and passing the NBME exam of a failed clerkship knowledge component.)
- Pass all core clerkship NBME clinical subject exams.
- **Pain Management** Module
- Communication Skills Modules
- Be at least 21 years of age.
- Pursue the study of medicine for at least three years at St. George's University School of Medicine.
- Maintain acceptable professional behavior and standards.
- Be discharged of all indebtedness to the University.

- Comply with the requirements for admission.
- Be approved for graduation by the Graduate Assessment Board.

HONORS DESIGNATIONS

- Magna Cum Laude (with great honor)
 - Students graduating with a cumulative WMPG of 97%+
- Summa Cum Laude (with highest honors)
 - Students graduating with a cumulative WMPG between 93%–96%
- Cum Laude (with honors)
 - Students graduating with a cumulative WMPG between 90%–92%

Timeline Requirements for the Clinical Studies

The MD program is designed for students to complete in 4 or 4.5 years depending on matriculation, with 2 years spent studying the Basic Sciences phase (Year 1 and Year 2) and 2 years spent completing the Clinical Studies phase (Year 3 and Year 4). Students may take additional time to remediate courses, prepare for Step exams (bridge time), or take Leave of Absence for a variety of reasons. However, students may not take more than 6 years from the date of matriculation to complete the MD program.

Students intending to start the Clinical Science phase in the US will typically use time available between the Basic Sciences phase and Clinical Science phase ("GAP" time) to prepare for and take the Step 1 exam. Students who complete the Basic Science phase in 2 years have up to 1 year to start the Clinical Phase and those who have taken 2.5 years have up to 6 months; however most students progress to clinicals within 3-5 months to ensure their timelines fit with ideal clerkship start dates, Step 2 schedules, and the NRMP timing and are discouraged from taking an excessive amount of time between the phases unless content remediation for the Step 1 warrants additional preparation time. Those students who have taken the maximum 3 years to complete the Basic Sciences must start their clinical studies in the US or the UK within 6 months of completing the Basic Sciences. In rare cases, students may have been granted an exception as a result of failing a course of <4 credits or by the CAPPS to take additional time to complete the Basic Sciences. In such cases,

students must progress from the Basic Sciences directly to the Clinical Science phase at the next available clerkship start date.

Regardless of when the clinical phase begins (the first clerkship), students must remain on track to complete the MD program within 6 years of matriculation. Due to the expectations and timeline for completing the clinical phase, any student with less than 2 years remaining timeline, who has not yet started the clerkship phase, or any student who delays progress during the clinical phase such that a 6 year completion is impossible, will be reviewed by the APRC and may be recommended for dismissal. Any student recommended for dismissal may appeal to the CAPPS.

TIMELINE FOR AUGUST MATRICULANTS

Students who matriculate in the August term complete their MD program in four years, assuming no extension to their timeline.

1. Basic Sciences: Students complete these courses in May of the second year following their matriculation.
2. Start of the clerkship year: Students who wish to start clinical training in the United States take the USMLE Step 1 in July and start their first clinical term in August or September. Students who wish to start clinical training in the United Kingdom do not have to take the USMLE Step 1 and can start in the United Kingdom in July.
3. End of the advanced clinical year: Students complete the clinical curriculum by May or June in the second year following the commencement of clinical training (e.g., if clinical training begins in July, August, or September 2019, then graduation is in June 2020). This is four years or less after matriculation. Students interested in a US residency should seek a May graduation date, if possible, to ensure ECFMG paperwork and state licensing paperwork prior to the start of residency orientation.

Terms 6 through 10 represent an intensive educational period. Students who start in September have approximately 90 weeks to complete an 80-week curriculum. During this time, students interested in a US residency also study for and take the USMLE Step 2 (CK) and apply for residencies.

TIMELINE FOR JANUARY/APRIL MATRICULANTS

Students who matriculate in the January/April term generally complete their MD program in four and a half years (4.5), assuming no extension to their timeline.

1. Basic Sciences: Students complete these courses in December of the second year following their matriculation.
2. Start of the clerkship year: Students who wish to start clinical training in the United States take the USMLE Step 1 in March and start their first clinical term in May or June. Students who wish to start clinical training in the United Kingdom do not have to take the USMLE Step 1 and can start in the United Kingdom in January or April.
3. End of the advanced clinical year: While students can graduate in December in the second year after starting clinical training, most students opt to graduate in May, approximately two years after starting clinical training. Terms 6 through 10 represent an intensive educational period. Students who start in May have approximately 100 weeks to complete an 80-week curriculum and graduate in June. During this time, students interested in a US residency also study for and take the USMLE Step 2 (CK) and apply for residencies.

A Three-Year Clinical Schedule

Most students complete their clinical training and graduate in two or two and one-half calendar years after completing the basic sciences program. These students usually take Step 2 CK once all Year 3 requirements are completed. However, students have the option to choose a three-year clinical studies schedule (a fifth year in the Four-Year MD program).

These students can take Step 2 CK after four years of medical school, allowing them more time to prepare for Step 2 CK. During this period, students also have the option to participate in individually tailored program of electives and/or conduct research.

The Office of Career Guidance (OCG) may advise students to consider a fifth year if they meet one or more of the criteria below which are predictors of poor performance on Step 2 CK and CK.

1. Academic difficulties in the basic science terms
2. Failing or performing poorly on Step 1

3. Negative comments or a C/Pass in the Clinical Skills component of the clerkships
4. Deficient performance on the NBME Clinical Subject Exams, including any failure

Students who meet these criteria have not achieved a satisfactory level of competencies in medical knowledge and test-taking skills and should consider delaying Step 2 CK until completing additional training and study in the fourth year. The School can assist in developing individualized programs of additional fourth year educational activities. These students can then enter the next residency pool with a stronger academic profile by utilizing the fourth year as preparation for Step 2. These students can still graduate at the end of their fourth year. Alternatively, they can postpone graduation and remain in medical school for a fifth year. In this fifth-year students can enter a dual degree program, such as the Master of Public Health (MPH), Master of Business Administration (MBA) or Master of Science in Biomedical Research (MScBR). The school can also arrange up to eight weeks of additional electives at affiliated hospitals with additional electives at nonaffiliated hospitals, an advanced sub-internship, other research opportunities or teaching assistantships. These fifth-year options are provided at no tuition cost. Each student's primary advisor can help the student decide which clinical schedule is best based each student's career goals.

Extended Timelines in the Clinical Program

A student may take an LOA in the clinical phase. Students who have taken excessive leaves of absence for health or other reasons should limit their bridge time and are forewarned that they must complete their program of study within the 6 year timeline requirements.

The need to take off more than one year is incompatible with satisfactory progress and can lead to dismissal from the medical school. Above all, students must remain within the satisfactory academic progress guidelines.

Students need to be aware that extending their timeline, which may be advantageous academically, may diminish their prospects in the residency match program. In addition, any disruption in a student's matriculation may affect their loan repayment status if they are receiving US federal loans.

Regardless of the structure of a student's timeline, students must complete the MD Program within 6 years of matriculation.

Bridge Time for Students

During the clinical terms, promotion depends on passing clerkships, family medicine and Internal Medicine required rotations, a sub-internship and electives. No formal break exists during clinical training nor is a special mechanism necessary to promote students from one clinical term to another. After passing one clinical rotation, a student then goes on to the next scheduled rotation.

Clinical rotations are scheduled year-round. Clinical students who need to schedule a few weeks off between rotations may do so. This is referred to as bridge time. Students must notify their clinical student coordinator in the Office of Clinical Education Operations and receive approval prior to taking bridge time. The amount of bridge time available to students depends upon when the clinical period begins. Students are allowed up to 20 weeks of bridge time within a 12-month period. Liberal use of bridge time may negatively impact satisfactory academic progress and ultimate graduation date.

Students must complete all of their clinical training within three years from the start of their clinical program; however, students permitted to take more than 3 years to start their clinical clerkships are considered to have "borrowed" time from the 3 years allotted to complete clinical studies. Students must complete all MD program requirements within a 6-year timeline. Students will be recommended for dismissal if they do not make progress as expected and will not complete within the 6-year maximum.

Section Five: Participation Standards and Time-off Policies

General

Clinical rotations require a full-time commitment by students. Clinical training involves students with patient care as part of the healthcare team and requires attendance at all didactic activities, completion of assignments and self-directed learning.

The faculty considers participation and engagement to be essential components of professionalism. Students must participate in all required educational activities as defined by clerkship directors. Clinical faculty **take participation into account when determining grades.**

Students are required to be at the hospital/clinic daily, Monday through Friday, as well as evenings and weekends if scheduled by the site and be on-call night and weekends as scheduled by the clerkship director. During clinical rotations, excessive tardiness can result in an F in the professional behavior component and no unexcused absences are permitted. Missing a lecture or failing to fulfill a clinical assignment will call into question a student's ability to accept the necessary responsibilities required of a physician. If a student must be absent for a period of a few hours, or a day or two, the student must obtain permission from the clerkship director before leaving. If a student is absent without permission from a scheduled rotation (including electives), the absenteeism could result in a lower or failing grade, and/or disciplinary action.

Students who are unable to participate in a rotation, should formally request a Leave of Absence, which counts towards a student's timeline and may, therefore, be denied if it will result in the student being unable to complete the MD program within the required 6-year maximum timeframe. Lengthy absences from a rotation without permission from the clerkship director, DME and the Office of Clinical Education Operations constitute a failure to complete required clerkship activities **and will result in a failing grade for the clerkship.**

The scheduling of clinical clerkships requires a great deal of work by the Office of Clinical Education Operations and hospitals. Because orientation is given at the beginning of each clerkship, students are responsible to be at the hospital at the assigned time. If a student cannot make the assigned starting date or plans to be late, the student must notify the Office of Clinical Education Operations and the DME at the hospital at once. Core rotations cannot be cancelled except for emergency reasons. The school does not allow employment in any capacity during clinical rotations.

Study Days

During the last 2 weeks of each rotation students take the NBME Clinical Subject Exam. During these weeks students are to be given two study days before their medicine and surgery NBME Clinical Subject Exam and one study day before their psychiatry, pediatrics, family medicine and ob/gyn NBME Clinical Subject Exam. During these days students are not required to be in the hospital or clinic and do not have to make up this time.

Step 2 CK

Students should not take Step 2 CK during their clerkships.

Residency Interviews

Students must take into consideration policies related to scheduled electives when scheduling residency interviews in the months leading up to the match. SGUSOM has a policy for senior students taking time off during clinical rotations, including electives. Electives, once approved by the hospital, may not be cancelled by the student without consent of the hospital. Failure to do so in the past has led to problems that have jeopardized students' graduation dates. Our policy above states that "Unexcused absences are not permitted while doing a clinical rotation." An appointment for a residency interview does not qualify as an "excused absence". An "excused absence" means the student has permission from an attending physician (DME, Clerkship Director or Preceptor) to take time off for the interview. This needs to be discussed ahead of time, preferably even before the rotation starts. Absences from a rotation without such permission, even for interviews, can be grounds for an incomplete or failure in that rotation. The reason for this is that DMEs, clerkship directors and/or preceptors must certify that the student has attended the rotation for the designated number of weeks. From a legal and regulatory point of view, a week is defined as five full days. If students travel to interviews and miss several days of the rotation, asking that the evaluation form attest to a full rotation without making up that time would be fraudulent. Any days off or lost clinical time from rotations must be made up by utilizing additional on call or weekend time at the discretion of the clerkship director. Educational projects, such as a research assignment and/or presentation of a topic, could

also be used by the clerkship director to make up time away from the rotation. No time off is permitted during sub-internships.

Students are advised to arrange for a four-week LOA or bridge time to attend many or all residency interviews. However, not every student can afford the time off. Students are encouraged to look at their clinical calendar (see the OCG website under 3rd year) to see if they can take the time off without jeopardizing their graduation timeline. Students who cannot take any time off should try to plan their interview season so that interviews are dispersed among the four months of "interview season," if possible. Any questions about this policy should be referred to the student's primary advisor.

Cancellation Policy

A student must give the hospital and the Office of Clinical Education Operations notification of cancellation at least 90 days ahead of the start date of an elective or sub-internship. If less than 90 days, the student will be responsible for hospital fees for the cancelled rotation and be referred to the Dean of Students for unprofessional behavior. A second cancellation without 90 days' notice may lead to suspension from the school and mention of the suspension in the student's MSPE. If a student cancels, the student is responsible for full tuition for the cancelled rotation and will not receive credit for any rotation for that same time period. Hospitals should not cancel electives; students should notify the Office of Clinical Education Operations if this happens. Cancellation fees will be waived by the school for students that must cancel scheduled electives because of a failed NBME exam within 3 months of the starting date.

Medical Excuse from Exams

The NBME Clinical Subject Examination is a required assessment of clinical knowledge in the core clerkships and for the Family Medicine/General Practice require rotation. Passing all 6 required NBMEs is a graduation requirement. Students are expected to take the NBME within the final 2 weeks of the rotation for which it is required as per the schedule described in the assessment section of the CTM.

In rare instances, medical reasons may prevent a student taking an examination as scheduled. Students are entitled to one Medical Excuse for examinations per 12-month period.

Students should use their Medical Excuse wisely as no additional excused absences for examinations will be allowed in a 12-month period. If a student does not take an examination as scheduled and has already used his/her Medical Excuse in the prior 12-month period, then the student will be deemed to have failed to complete all required clerkship activities and will receive a failing grade for the knowledge component of the clerkship/required rotation and for the rotation.

Students with extenuating medical circumstances for missing an additional examination should seek guidance from the Dean of Students Office (dos@sgu.edu). Students in this situation are encouraged to contact the DOS office prior to missing in the examination. In circumstances where this is not possible, students must contact the DOS office as soon as possible and provide documentation for their incapacitation.

PROCEDURE FOR SUBMITTING MEDICAL EXCUSE (ME)

To submit a Medical Excuse, the student uses the "SOM Examinations" link on the University Portal (at [https://cas.sgu.edu/cas/login\[GB1\]](https://cas.sgu.edu/cas/login[GB1])). This self-report form must be submitted before the scheduled examination time. The Medical Excuse covers all exams within a 7-day period starting from the date of submission of the Medical Excuse if the medical excuse falls within the course start and end dates. If a student becomes able to take some or all of the examinations during the timeframe covered by the Medical Excuse, he/she may take any remaining examinations. If a student makes a second Medical Excuse request within 12 months, then the student receives a written notice about his/her ineligibility for a second Medical Excuse and is apprised of the consequences of missing the examination(s).

Note: Students may not request a Medical Excuse once they have started an exam. Once a student has started an exam, a score will be submitted and contribute to the student's grade, irrespective of how much of the exam is completed. Therefore, students are strongly discouraged from taking an exam if they are unwell.

PROCESS FOR RESOLUTION OF MISSED EXAMINATIONS

Any student with an approved absence who misses an examination will receive an "I" for the exam score. The student receives an "I" for the clinical knowledge component of the clerkship grade, is issued an Incomplete grade for the course, and is expected to take the Completion Examination. Students take the Completion once all core clerkships are completed (end of Year 3) and by the end of year 4 if FM/GP required rotation was completed during year 4. Students should consider this completion examination period when scheduling elective rotations.

Faculty Panel for Academic Professionalism (FPAP)

The FPAP deal with all professional behavior issues whilst students are enrolled in the clinical studies courses, e.g., missed examinations, examination compliance issues, cheating, plagiarism, and/or behavior contrary to the outcome objectives and expectations provided in the student manual and syllabus.

Where appropriate, any course and examination noncompliance issues may be referred to a senior associate dean of clinical studies Faculty Panel on Academic Professionalism hearing. The Panel Hearings will be administered by the Office of the Senior Associate Dean of Clinical Studies. An Associate/Assistant Dean of Clinical Studies, not involved directly in student support, will Chair the meeting, and the membership of the panel will be comprised of at least 2 other faculty of the School of Medicine as appointed by the Snr Assoc Dean of Clinical Studies. The faculty serving on the panel will be MD faculty of the SOM, that are not involved in student advising, and that have experience with the standards for promotion and progression outlined in the student manual.

A quorum for the committee is 3, and decisions are reached by simple majority in which the Chair has a casting vote in the event of a tie. The committee may refer the student to an appropriate support service, or when appropriate, and as outlined in the course syllabus, recommend application of the appropriate academic penalty published in the course syllabus. The panel may reduce the penalty applied, but cannot exceed that published in the syllabus. The committee may also require evidence of remediation and can define a customized remediation pathway for any infractions related to lapsed professional behavior. Course grades may be held as

incomplete (I) until the student demonstrates any remediation outcomes as defined by the FPAP. The recommendation of the Panel is passed to the Snr Assoc Dean of Snr Assoc Dean of Clinical Studies for action and communication to the student by the Senior Associate Dean of Snr Assoc Dean of Clinical Studies Office.

Section Six: Student Support Services

Overview

Over 1500 clinical faculty based at over 70 affiliated hospitals are responsible for the clinical training of SGUSOM students. Additionally and as described above, over 50 administrators, physicians and staff employed by the University place students in affiliated hospitals and guide them through the third and fourth year of medical school and, for many students, the US residency application process. To further augment the educational program the school has developed an extensive student support structure to provide academic advice, career guidance, residency application assistance, and behavioral health/wellness programs. These programs and the ones described below concentrate on US residencies. The school also provides support for students interested in postgraduate training in other countries.

Clinical Terms- Guidance Resources and Schedules

During the clinical years, the school has extensive student support services to provide academic advising, career counseling and psychological services. The Office of Career Guidance should be consulted for advice on career opportunities and preparing for postgraduate training. The Office of the Dean, Office of Senior Associate Dean of Clinical Studies and the Office of the Dean of Students are available for guidance on other issues. The Directors of Medical Education, clerkship directors, preceptors, medical education coordinators and clinical faculty at clinical sites are also available for advice. Each student who progresses to clinical studies will be assigned a clinical primary advisor whom the student is required to contact early in Year 3 of clinical studies

Office of Career Guidance (OCG)

The *Office of Career Guidance (OCG)* is in the Office of the Dean and works closely with the Office of Clinical Studies and the Dean of Students. The OCG advises and counsels medical students from the beginning of their educational process at SGU through graduation and into the early alumni years. All students have access to the OCG website and staff. Counseling is provided on an individual basis and is private and confidential.

For students interested in postgraduate training in the US, the OCG is committed to helping each student secure a residency training position upon completion of the MD program. The OCG provides support, tools and resources throughout medical school. As students enter clinical training, the OCG helps to optimize their residency application strategy, supporting them during the process of ultimately finding a residency that is the right fit for them. This commitment includes offering pathways to choosing a specialty, preparing strong residency applications, applying to the right programs, learning best practices for residency interviews and understanding all the ways to attain residencies.

During the basic science terms, the OCG offers the mandatory OCG-1 talk for students in Term 1. The importance of the basic science years with preparation for the USMLE Step 1 examination for those interested in medical licensure in the US is discussed. These talks also introduce students to available review programs as well as the OCG website and how to access valuable information there. During Term 5 the OCG-2 talk is presented and is also mandatory for students. An in-depth discussion about the USMLE Step 1 and what to expect of the clinical program is presented with input from the Student Government Association - Clinical (SGA-C).

In the clinical years, the OCG informs students of various deadlines pertaining to external examinations and residency applications. Building upon the OCG talks presented in students' Basic Sciences year, the OCG continues with additional live webinar presentations intended to give in-depth guidance on the residency application process. The OCG provides multiple presentations of the OCG-3 talk, encompassing these topics, in the winter of each year for third year students to discuss the

residency application and interview process. Each year several presentations are given at SGU's major hospital affiliations, which can include live webinar sessions offered on-line to allow students to ask questions. The OCG also maintains a robust website, which is frequently updated. Students are advised to visit the website on a regular basis to be informed about any changing regulations.

The OCG counsels students about the road to a US residency via the NRMP/ERAS as well as the occasional opportunity to sign outside the match (also known as All Out programs). SGU places great value on its relationship with all participating hospitals. In addition, the OCG has advisors who provide advice concerning the postgraduate training application process for Canada, the UK and EU countries.

In March each year the OCG website has a Current Available Positions (CAPS) section as a resource for residency programs to list their available positions. Graduates and students who are looking for a residency position post-match should review this site frequently. The OCG offers a webinar about the Supplemental Offer and Acceptance Program (SOAP) prior to the match for students and grads who had a difficult residency application process, only a few interviews or were ineligible for the NRMP. A live SOAP webinar Q&A is held the Monday of match week to assist students in the process. After the match, the OCG has a live webinar with a panel to discuss options available to unmatched students such as obtaining an MPH, an MBA and doing additional elective rotations or research. After an unmatched student participates in this webinar, appointments are made with a senior OCG advisor to discuss what is best for the student to improve their chances of getting a residency in the next NRMP cycle. Students are encouraged to call upon the expertise of the OCG Advisors and its website (refer to Section I for contact information).

OCG helps students with residency selection and procurement, the National Resident Matching Program (Match) and Electronic Residency Application Assistance (ERAS). Please refer to the OCG website:

<http://www.sguocg.net/yallng13nnhahs4sd8ruYYGsmN/>

For OCG Support and Guidance Contact:
careerguidance@sgu.edu

Medical Student's Performance Evaluation (MSPE)

The Office of the Dean composes an MSPE for all students in support of their residency applications. The MSPE is primarily submitted to the Electronic Residency Application Service (ERAS) for students participating in the National Residency Matching Program but also to other matching services and to individual residency programs that do not participate in ERAS.

MSPE's are updated throughout the clinical years by a team of MSPE Coordinators under the direction of the Dean, School of Medicine. Once a student graduates, no new information is added but the MSPE will be finalized to include all grades and to reflect graduate status. The format of the MSPE, based on guidelines provided by the Association of American Medical Colleges (AAMC), is standard for all students and cannot be changed.

Students are required to submit an MSPE Information Form (MIF) during a six week solicitation period in Jan-Feb of the year prior to graduation (e.g. Jan-Feb 2019 for 2020 grads). MSPE's are composed based on anticipated graduation year, not anticipated Match participation year.

The Summary section of the MSPE includes an Endorsement Level (EL) determined by the MSPE Coordinator under the authority of the Dean, School of Medicine. There are five EL's: Outstanding, Excellent, Very Strong, Strong and Good. The initial factor in determining a student's EL are grades but professional behavior (PB) plays a pivotal role.

The main source for PB information is the commentary students receive during rotations but disciplinary issues during basic sciences and general interactions with hospital and SGUSOM faculty, administration and staff throughout students' studies can also contribute to the EL. For example, a B student with exceptional evaluation comments and/or notable feedback from faculty/staff may earn a higher EL than their grades alone dictate. Conversely, an A+ student with problematic comments/interactions will not receive the highest EL. Other factors that can lower the EL include

suspensions, probations or multiple LOA's. USMLE scores are included in the MSPE but do not constitute significant EL criteria.

Students receive an MSPE review copy (RC) sometime after an initial draft is composed, enabling them to correct factual errors. RC's do not include the Summary section because it is not finalized until shortly before ERAS transmission and is subject to change thereafter. Students can request a finalized, unofficial MSPE after they receive their diploma.

MSPE's are uploaded to ERAS and other matching services in late summer-early fall. They can be emailed on request to individual, "all-out" programs that do not participate in the matching services after 10/1, the MSPE's official release date. Students must provide detailed contact information for all-out programs (Name, Title, Department, Hospital, City/State, Email Address). MSPE Coordinators are also responsible for sending transcripts to matching services and individual programs, as well as SGU Department Chair Letters directly to students that require them.

MSPE's and transcripts sent to matching services are NOT updated automatically. Students must contact their MSPE Coordinator to request newer versions containing additional core grades. Similarly, students who go unmatched in their anticipated graduating year must request an updated MSPE and transcript from their MSPE Coordinator after they reopen their ERAS account in the subsequent year. The versions that will initially appear in their account are those that were sent during the previous match cycle.

Further details about the MSPE process can be found in the MSPE section of the Clinical website.

<https://mycampus.sgu.edu/group/sgu-clinical/mspe-deans-letter-transcripts-lors>

Healthcare

All clinical students are required to have health insurance

While in their clinical training, students should contact the DME at their clinical center or hospital for acute healthcare problems. These include medical illnesses, psychological problems, and potentially hazardous

environmental exposures (see Exposure Policy below). The Office of Clinical Education Operations should also be notified and will help students with both acute and long-term care.

The issue of student health care while in hospitals requires further clarification. Students rotating through hospitals are not employees and should not have access to employee or occupational health services. They are not covered under Workman's Compensation Laws. Whenever possible, students with an injury, illness or other health related problems should see a private physician in their health plan.

Students are not to use the Emergency Department (ED) for routine problems. Students are responsible for all fees that are charged by the ED, physicians and hospital that are not covered by their health plan. Insurance policies may not cover non-emergency illnesses or injuries treated in the hospital ED and/or may require a co-payment. Only serious, acute problems should necessitate an ED visit.

Exposure Policy

In the case of potentially hazardous environmental exposure, students should inform their DME and the Office of Clinical Education Operations (as detailed above) and follow the hospital's exposure policy, which may require an ED visit. Students should have health insurance to cover the cost of treatment of hazardous environmental exposures.

Psychological Services

Students are encouraged to approach any member of the University's faculty or administration with any behavioral, psychological or substance abuse problem. Such problems coming to the attention of a clinical faculty member should be referred to the relevant dean. Any dean or department chair is available during site visits to discuss personal questions or problems. Members of the SGUSOM administration can be contacted any time by email. In addition, Dr. Laurence Dopkin, a psychiatrist and Assistant Dean of Students, can be contacted by any student at ldopkin@sgu.edu. These contacts will be confidential.

In the UK, a special psychological counseling service is available for SGU students on a 24-hour basis. A meeting with a local mentor/counselor or referral to the School's counselor

can be arranged. Counseling should be initiated by the student or after discussion with the local DME.

Academic Advice

During clerkships: Clerkship directors are available to students for all academic difficulty issues. The CDs are responsible for mentoring students with academic difficulties identified during the midcore evaluation where they provide students with a formative assessment and review the student's Patient Encounter Log (PEL) and Firecracker quiz scores. If academic difficulties are identified, the student is referred to their primary academic advisor

Full-time faculty academic advisors: Full-time academic advisors track and support assigned students who have been identified as 'at-risk' due to not meeting SGUSOM academic standards, as well as students in need of professional behavior remediation. Advisors may refer students to other support services (PSC, Health Services, and DOS) as appropriate.

Part-time faculty academic advisors (primary advisors): Select clinicians who are faculty members (who have no role in assessing students) serve as primary advisors for students. These faculty members are available to assist students with academic and program-related questions, as well as with advice about academic options and consequences. All students are assigned a primary advisor in years one and two. When students transition to the clinical program in years three and four, they are assigned a new primary advisor. These clinical primary advisors are physicians mostly onsite at the affiliated hospitals where the student is rotating and provide guidance via 1:1 appointment, or advise students virtually, from a separate site. Advisors may refer students to other support services as appropriate.

During clerkships: CDs are available to students for all academic difficulty issues. The CDs are responsible for mentoring students with academic difficulties identified during the midcore evaluation where they provide students with a formative assessment and review the student's Patient Encounter Log (PEL) and Firecracker quiz scores. If academic difficulties are identified, the student is referred to their primary advisor.

Food and Housing

All clinical centers and affiliated hospitals provide information about access to food and housing. Food and housing vary from site to site but remain the student's responsibility. Information about hospitals' housing, parking permits, meal tickets and similar local issues are provided by the hospital's Medical Education Coordinators who assist SGU students at clinical centers and affiliated hospitals. A listing of hospitals offering meal tickets and parking permits can be found on the official clinical website. Departing students and the student coordinators at each hospital provide listings of available housing, which is helpful to the students. Students are responsible for their own transportation to and from their hospital.

Financial Services

Questions about student accounts and billing are handled at the Office of Student Finances. Information about scholarships or loans, counseling for financial planning, budgeting and debt management are provided by the Office of Financial Aid. Both offices are located at University Support Services, LLC, 3500 Sunrise Highway, Building 300, Great River, New York 11739. The phone numbers are: 631-665-8500, or 1-800-899-6337.

Section Seven: Extracurricular Activities

The Medical Student Research Institute

SGUSOM has invested extensively in developing a Medical Student Research Institute (MSRI). This is part of our mission to establish research as an integral component of the MD program. The MSRI grew out of SGU's conviction that research is necessary for progress in the understanding of health and disease and for improving patient care. The MSRI provides an opportunity for exceptional students to spend part of their medical school experience involved in basic, clinical, translational or social science research under expert faculty mentorship. Students have the opportunity to conduct research within the specialties that interest them with expectations that this will shape their career goals and help

build an academic track record that will be viewed favorably by competitive residency programs.

The MSRI offers two tracks for students:

- **Distinction in Research**

This track is available to students in Terms 2 through 5 with at least an A average. Once accepted into this program, students become involved in research throughout medical school and have the opportunity to graduate with "Distinction in Research".

- **Research Member**

This is available to students who have completed Term 5 with at least a B average and are usually arranged individually by students and clinical faculty at affiliated hospitals. Students in their clinical terms can select from a variety of research projects and faculty mentors and begin a unique mentored experience in clinical research.

Both tracks are available only to students who have a strong academic record. The faculty has established these criteria because they believe that the primary responsibility of all medical students is to master the material in their basic science courses and clinical rotations and strive for academic excellence. Students can also do research independently. However, as important as research is, students cannot let it interfere with their academic performance.

Interested students are encouraged to review the selection criteria and required documents needed to become a member of the MSRI. Students are able to obtain more detailed information on the MSRI website. The University will award students who publish manuscripts and meet the MSRI criteria an "MD with Distinction in Research" at the time of graduation.

Gold Humanism Honor Society

GHHS is an international society dedicated to supporting humanism in medicine, and SGUSOM sponsors one of the largest GHHS chapters for SGU students. Membership is based on peer nomination, faculty review and induction in the third year of medical school. Membership requires a commitment to a service or chapter

project. Students interested in the GHHS can find more information on the GHHS web-site and can contact Dr. Cheryl Cox Macpherson, the faculty sponsor, at ccox@sgu.edu.

Scholarly Activity

To support scholarly activity, the School of Medicine offers clinical students a one-time reimbursement up to \$1000 to attend a conference in order to present an abstract or poster. Each student can qualify only once during their medical school tenure. In order to be approved the student must clearly be identified on the heading of the poster or abstract as being from SGUSOM. Students must request preliminary approval for reimbursement before they attend by sending a copy of the conference invitation to the Office of the Dean (officeofthedeansgusom@SGU.EDU) along with a copy of the abstract or poster. After the conference, students should fax or send electronically the receipts for their travel, lodging, meals, and miscellaneous associated expenses, W9 form (necessary to be completed by US citizens), as well as a current mailing address and their student ID#. SGU will not reimburse for tips and alcohol or charges/amounts deemed unreasonable by The Office of the Dean. Students should receive a check in about four weeks after submitting expenses. Students should submit an article about their work for publication in the University newsletter to cmccann@sgu.edu.

Students who have completed scholarly activities may be recognized at graduation for their work.

Dual Degrees

The dual degree programs include MD/MPH (Masters of Public Health), MD/MBA (Masters of Business Administration-Health) and MD/MScBR (Masters in Biomedical Research). Details can be found on the SGU website.

Section Eight: Assessment and Grading

The Formative Mid-Core Assessment

Clerkship directors must arrange for formative mid-core assessments of all students in order to

discuss the student's performance including a review the Electronic Patient Encounter Log, Firecracker quizzes and case write-ups. These consist of individualized **face-to-face** meetings with each student and completion of the mid-core evaluation form (Appendix E).

The midcore assessment is designed to achieve the following:

- Provide students with qualitative feedback early enough in the clerkship to allow time to address deficiencies.
- Provide clerkship directors an opportunity to help students recognize their strengths.
- Offer encouragement if the student is doing well or a warning with constructive criticism if the student is doing poorly.
- Enable medical students to measure their progress in learning.

Comments in the mid-core might be integrated into the final evaluation.

The Summative Final Clerkship Evaluation

Grading Policy for the Clerkships

The clerkship director completes an electronic final assessment form for each student in a core clerkship. The form provides narrative comments, grades in individual components and a final summative grade (Appendix E). The narrative comments summarize the student's clinical performance and, importantly, professional behavior. Comments may also include attendance, rapport with patients and staff and the extent to which the students developed the required competencies for that core. This narrative section offers the faculty the opportunity to provide additional personalized evaluative information beyond the grades. These comments may be quoted in the MSPE. An additional section allows for constructive comments to promote ongoing development that are not used in the MSPE. Students should make every effort to review these comments as soon as possible after completion of a rotation. The opinions of the physicians who have worked with a student are critical for self-reflection and should be a catalyst for ongoing self-directed learning and self-improvement by the student. In particular, constructive criticisms can help a student develop into a more competent physician. Students can review these comments electronically after they complete the student

feedback questionnaire. The evaluation forms are on the SGU portal ? (the SGU internal website) under Clinical Evaluation.

Grading System for Students Who Started Their Core Clerkships (Year 3) Before January 3rd, 2022

The final grade in the clerkship represents a semi-quantitative average of five components:

- a. Medical Knowledge 20%
- b. Clinical Skills 20%
- c. Professional Behavior 20%
- d. Communication Skills 10%
- e. NBME Clinical Subject Exam grade 30%

Items one through four reflect subjective faculty assessments at the hospital.

The students take the NBME Clinical Subject Exam during the final 2 weeks of their clerkship. The Office of Clinical Education Operations receives the scores from the NBME and scores are automatically uploaded to the SGU Clinical Evaluation System.

The NBME Clinical Subject Exams will be graded as follows:

SCORE	GRADE
75 or greater	A+ (Honors)
70 – 74	A
65 – 69	B
60 – 64	C
59 or below	F

The electronic evaluation automatically determines the final grade based on the Clerkship Director's grades of the individual components plus the NBME grade. Depending on the grades on other evaluation components, it is possible for students who fail the NBME exam but pass the other components of the clerkship to earn a passing grade for the clerkship. This grade is final. Even after repeating and passing the NBME exams, the grade will not be changed. In such cases repeating the clerkship is not necessary; the school will give students credit for the clerkship. However, the Graduation Assessment Board will not approve this student for graduation until the student demonstrates competency in the relevant subject area by passing the make-up of the failed

NBME examination after additional study time to improve medical knowledge and test-taking skills.

Since performance on the NBME clinical Subject Exams correlates with performance on Step 2 CK, students who perform poorly on the NBME exams (failing or persistent low scores) should consider a structured program during their fourth year to improve their medical knowledge and test-taking skills. In another example, a student may pass the NBME but fail another individual component of the clerkship such as communication skills or professional behavior. In such a case, if the final grade is passing, the school will give the student credit for the clerkship, but the student should work to remediate these deficiencies during subsequent rotations to achieve the desired level of competency in the particular component(s).

1. Definition of Grades

A+ (honors) requires all As and an A+ on the NBME exam. A+ (honors) must be given to students with these grades.

A is given to students who proficiently develop the competencies listed in the Clinical Training Manual and whose overall performance is good.

B is given to those students who only adequately develop the required competencies and whose overall performance is acceptable.

C is given to those students who barely meet minimum requirements. This grade is, in fact, a "warning" grade and identifies a student who is struggling in medical school and Requires additional mandated training and/or counseling.

F is given to those students whose continuation in medical school is problematic. An 'F' in any component of the assessment precludes a student from meeting graduation requirements until the GAB determines that the student has reached the required level of competency in that component (s). A final grade of F leads to a recommendation for dismissal from medical school.

NG A Clerkship Director may report a "No Grade" for a student who is registered in a course. Students must fulfill all course requirements as defined by the Clerkship. Once all requirements have been completed, the NG will convert to a final grade. Failure to complete remaining

requirements within the required timeframe as outlined in the CTM will result in an “F” grade for the clerkship.

I is given when additional clinical work/ remediation is required to complete the course. The “I” designation remains on the transcript until a final course grade is given upon completion of remaining course requirements.

Clerkship Directors have the option of adding + or – to the above grades based on their opinion. Only A+ requires objective criteria.

In summary, grading of student performance should use the following:

A+ = exceptional

A = good

B = adequate

C = minimal

F = failing

Components of the Assessment

Clinical Performance

The teaching physicians who work with the student during the rotation assess the student’s clinical performance in four areas: clinical reasoning, clinical skills, communication, and professional behavior (Appendix X). The more feedback the Clerkship Director gets from different members of the medical staff that instructed the student, the more objective grades can be. The faculty assesses the extent to which the student has developed the competencies required for that rotation. These specific competencies appear in Section II of this manual in the curriculum for each of the core clerkships.

NBME End of Clerkship Exam Policies and Procedures

The NBME Clinical Subject (Shelf) Exam must be taken by all students during the final 2 weeks of the clerkship. Scheduling for this exam is done by the Office of Clinical Education Operations – NBME Team. Students who test at Prometric Centers receive permits at least three weeks prior to each exam. Hospitals must excuse students one day before the pediatrics, family

medicine, ob/gyn and psychiatry exams for study time and two days before the medicine and surgery exam for study time. Students are excused for the entire day of the exam.

Clinical experience during the rotation does not provide adequate preparation for the NBME exam. Students must use UWorld and Firecracker as well as other recommended resources for each clerkship to prepare for these exams. Students can find the content outline of these exams on the NBME website. Students must sit the NBME exam before starting their next rotation.

- All students must attend the NBME exam as scheduled.
- Students who are too ill to take the exam as scheduled should refer to the “Medical Excuse” policy in the Student Manual.
- Failure to take the NBME End of Clerkship Exam on time constitutes a failure to complete required clerkship components and will result in a failing grade for the clerkship.
- Students who earn a failing grade in a clerkship must repeat and pass the clerkship to meet graduation requirements.
- Any student who has failed an NBME clinical subject exam must remediate knowledge deficiencies and retake the failed subject exam.
- Passing all 6 NBME clinical subject exams (IM, Surgery, Pediatrics, Ob/Gyn, Psychiatry, and Family Medicine) is a graduation requirement.
- Any student who fails a required NBME clinical subject exam is required to retake and pass the failed exam.
- For students who **have not yet completed** all required core clerkships (year 3), failed NBMEs must be retaken and passed prior to starting year 4 electives.
- For students **who have completed** all required core clerkships (currently in their 4th year), all failed NBME exams must be re-taken and passed by the end of the 4th year.
- Students intending to schedule re-takes must contact johagan@sgu.edu for instructions on how to schedule this exam. Retakes must be scheduled at least 4 weeks prior to the intended exam date.
- Students should plan their schedules accordingly and consult their Primary Advisor for guidance on planned remediation and scheduling retakes.

- A 3-week remediation period for each failed NBME clinical subject exam is strongly recommended followed by the required retake of the failed exam. This may be taken in the form of bridge time or an LOA.
- A GAB elective in the failed subject is no longer a requirement for remediation of failed NBME clinical subject exams. Students who have already scheduled these electives may take the elective as planned or arrange for an alternate elective. Contact your clinical student coordinator for any changes to scheduled electives.

Implications for Academic Progress

The final grade for the core clerkship is determined by grades earned for each of the 5 components.

- Students must successfully complete all core clerkship/FM/GP requirements and pass each core clerkship/required rotation/ elective.
- Students who do not complete required clerkship components by the scheduled end of a clerkship and are not on an approved LOA and will earn a failing grade for the clerkship. An approved medical excuse is required for students to delay the end of clerkship NBME exam. Note: only one medical excuse is permitted per year.
- Students with a failing grade for the core clerkship/FM/GP required rotation will be required to repeat the clerkship/rotation in order to remediate academic deficiencies and earn a second grade for the clerkship.
- Students are permitted only one failure during the clinical studies phase of the curriculum. Students with a second failing grade in the clinical terms will be recommended for dismissal. Any student recommended for dismissal will be given the opportunity to appeal to the CAPPs.
- Students must be making progress toward completing the MD Program within the 6-year maximum allowable timeline. Students not likely to complete requirements within the maximum allowable timeline will be recommended for dismissal.

Sub-Internships

A formal mechanism exists for identifying and helping a student whose achievement is not up

to standard. If preceptors or attending physicians judge a student to be marginal, the clerkship director is notified. The student shall be informed as early as possible during the core clerkship and given assistance and counseling. Depending upon the seriousness of the problem, the department chair, the DME, and a Dean may be involved.

Thus, a three-tiered system for dealing with student problems exists at all clinical sites. Initially a student's preceptor and/or clerkship director discusses a student's behavior or attitude with the student. This is done at the time of the mid-core assessment or at any other time that is appropriate. Many times counseling the student is sufficient. If the problem recurs, a pattern develops or a single problem appears serious, the clerkship director notifies the DME. In addition, the University has appointed Onsite Advisors at many hospitals that can deal with students' problems. The DME and/or Onsite Advisor might meet with and counsel the student. If the problem is serious enough, the DME notifies the Deans' offices. The Dean of Students and the Dean of the School of Medicine have the ultimate responsibility for dealing with students' problems.

Grading System for Students Who Started Their Core Clerkships (Year 3) After January 3rd, 2022

Clinical Grading System

Performance in the clinical years is graded using a 3-component grading system framed around and aligns with the domains of the MD program objectives: knowledge, clinical skills, and professional behavior.

Student performance will be assessed in the 3 primary areas of competency. Final grades will be reported as Honors/High Pass/Pass/Fail.

Features 3-Component Grading System

Components	Elements Assessed	Measures	Weight	Overall Component Score
------------	-------------------	----------	--------	-------------------------

Knowledge Core Competency	Knowledge	<ul style="list-style-type: none"> NBME Clinical Subject Exam/Content Knowledge Exam 	100%	Honors	Fail	Fail	(if no prior Fs, must repeat the clerkship)	
				High Pass				High Pass
Clinical Skills Competency	Clinical Skills	<ul style="list-style-type: none"> Clinical Preceptor Evaluations of <ul style="list-style-type: none"> Practical clinical skills Clinical reasoning Communication skills 	40%	Honors	Fail	Fail	Fail	Fail (if no prior Fs, must repeat the clerkship)
			40%	High Pass				
			40%	Pass				
			20%	Pass				
				Fail				
Professional Behavior Competency	Professional Attitude/Behavior	<ul style="list-style-type: none"> Indirect Observation <ul style="list-style-type: none"> Clinical Preceptor Evaluations of Professional Attitude/Behavior Participation in/Completion of Clinical Requirements 		Honors	50%	50%		
			50%	High Pass				
			50%	Pass				
				Fail				

(e.g. PELs; Firecracker Quizzes; i-Human cases; Medical Ethics, Communications, & Geriatrics Modules, etc.)

Implications for Academic Progress

The final grade for the core clerkship is determined by grades earned for each of the 3 components. To facilitate student success, remediation of deficiencies is integral to the grading system.

- Students must successfully complete all core clerkship/FM/GP requirements, pass all 3 components, and resolve any "I" grades of the core clerkship in order to earn at least a "Pass" for the clerkship and progress to Year 4 of the MD program.
- Students who do not complete required clerkship components by the scheduled end of a clerkship and are not on an approved LOA and will earn a failing grade for the clerkship. An approved medical excuse is required for students to delay the end of clerkship NBME exam. Note: only one medical excuse is permitted per year.
- Failure of any of the 3 core clerkship/FM/GP components will result in an "I" grade and required remediation of the failed component. Students who earn an "I" grade for a failed component must attend an academic advising meeting to discuss remediation of the academic deficiency and the repercussions of additional failures. Time taken to remediate the knowledge component will consist of either bridge time or students will have to take a Leave of Absence.
- Failure of 2 or 3 core clerkship components will result in a failing grade for the core clerkship/FM/GP required rotation. Students will be required to repeat the clerkship/rotation in order to remediate academic deficiencies and earn a second grade for the clerkship.

Determination of Final Grade

Component 1	Component 2	Component 3	Final Grade
Honors	Honors	Honors	Honors
Honors	Honors	High Pass	Honors
Honors	Honors	Pass	High Pass
High Pass	High Pass	High Pass	High Pass
High Pass	High Pass	Pass	High Pass
High Pass	High Pass	Honors	High Pass
Pass	Pass	Pass	Pass
Pass	Pass	Honors	High Pass
Pass	Pass	High Pass	Pass
Honors	High Pass	Pass	High Pass
			"I"
Fail	Honors	Honors	(with required remediation of the failed component)
High Pass	High Pass		
Pass	Pass		
		Honors	Fail

- Students are permitted only one failure during the clinical studies phase of the curriculum. Students with a second failing grade in the clinical terms will be recommended for dismissal. Any student recommended for dismissal will be given the opportunity to appeal to the CAPPs.
- Students must be making progress toward completing the MD Program within the 6-year maximum allowable timeline. Students not likely to complete requirements within the maximum allowable timeline will be recommended for dismissal.

Failure of the Knowledge Component

First Failure

- **Students who fail the Knowledge component of a clerkship based on the NBME subject exam**, will be issued an “I” and be required to take a make-up exam in the same discipline in order to rectify the “I” grade in the clerkship.
- Students are required to meet with their academic advisor to discuss remediation and the repercussions of additional failures, and to develop an Individualized Learning Plan (ILP).
- Make up exams will be taken once students have completed all core clerkships. Each failed exam will require a remediation study period of 3 weeks per failed Knowledge Component followed by a make-up exam in the failed discipline. Remediation periods must be done sequentially, not concurrently. Remediation periods will be bridge time or a Leave of Absence.
- Students must earn at least a passing score on the make-up exam.
- The score for the makeup exam will be used to determine the final grade for the clerkship that will replace the “I”.
- The maximum score for the Knowledge Component following this remediation is a “High Pass”.

Second Failure

- A second failure of the Knowledge Component of the same clerkship, despite a remediation period, will require an additional remediation study period of 3 weeks followed by a make-up exam in the failed discipline.

- Students are required to meet with their academic advisor to discuss remediation and the repercussions of additional failures, and to develop an Individualized Learning Plan (ILP).
- The maximum score for the Knowledge Component following a second remediation is a “Pass”.
- If the student fails the second attempt at remediation, this will be treated as a second failed component and result in an F grade replacing the “I” given for the clerkship.

Failure of the Clinical Skills Component

First Failure

- **Students who fail the Clinical Skills Component of a clerkship** will be issued an “I” and be required to remediate non-discipline specific clinical skills deficiencies during the subsequent clerkship in order to rectify the “I” grade.
- Students are required to meet with their academic advisor to discuss remediation and the repercussions of additional failures, and to develop an Individualized Learning Plan (ILP).
- Students must earn at least a “Pass for the failed component during the remediation clerkship.
- Additionally, comments provided by preceptors of this clerkship should specifically appraise performance in the deficient component to demonstrate that remediation has occurred.
- Regardless of performance on the **Clinical Skills Component** during the remediation clerkship, a “Pass” will be used to resolve the “I” and determine the final grade.
- In order to remediate unresolved discipline-specific clinical skill deficiencies, students will be required to register for an elective in the same discipline as the failed clinical skills component.

Second Failure

- **A second failure of the Clinical Skills Component of a clerkship, despite an opportunity to remediate**, demonstrates the student is unable to remediate deficiencies independently. Focused remediation of clinical skills deficiencies will take place during the subsequent clerkship under the guidance of clinical preceptors in order to rectify the “I” grade in the clerkship.

- Students are required to meet with their academic advisor to discuss remediation and the repercussions of additional failures, and to develop an Individualized Learning Plan (ILP).
- Students must earn at least a “Pass” on the **Clinical Skills Component** of the subsequent clerkship.
- Additionally, comments provided by preceptors should specifically appraise performance in the deficient aspects of the clinical skills component to demonstrate that remediation has occurred.
- Regardless of performance on the **Clinical Skills Component** during the remediation term, a “Pass” will be used to resolve the “I” and determine the final grade.
- The second remediation attempt does not replace the discipline-specific elective requirement issued upon initial failure of the clinical skills component.
- If the student fails the second attempt at remediation, this will be treated as a second failed component and result in an F grade replacing the “I” given for the clerkship.

Failure of the Professional Behavior Component

First Failure

- **Students who fail the Professional Behavior Component of a clerkship** will be issued an “I” and be required to remediate deficiencies in professional behavior during the subsequent clerkship in order to rectify the “I” grade.
- Students are required to meet with their academic advisor to discuss remediation and the repercussions of additional failures, and to develop an Individualized Learning Plan (ILP).
- Students must earn at least a “Pass for the failed component during this clerkship to demonstrate remediation has been achieved.
- Regardless of performance on the Professional Behavior Component during the remediation clerkship, a “Pass” will be used to resolve the “I” and determine the final grade.

Second Failure

- **A second failure of the Professional Behavior Component, despite an opportunity to remediate,** demonstrates

the student is unable to remediate deficiencies independently. Focused remediation of professional behavior deficiencies will take place during the subsequent clerkship under the guidance of clinical preceptors.

- Students are required to meet with their academic advisor to discuss remediation and the repercussions of additional failures, and to develop an Individualized Learning Plan (ILP).
- Students must earn at least a “Pass on the **Professional Behavior Component** of the subsequent clerkship in order to rectify the “I” grade.
- Additionally, comments provided by preceptors should specifically appraise professional behavior to demonstrate that remediation has occurred.
- Regardless of performance on the Professional Behavior Component during the remediation clerkship, a “Pass” will be used to resolve the “I” and determine the final grade.
- If the student fails the second attempt at remediation, this will be treated as a second failed component and result in an F grade replacing the “I” given for the clerkship.

Remediation of Failed Components: Highlights

Components Failed	First Failure	Second Failure	Third Failure
	- “I” grade for clerkship	- “I” grade for clerkship	
	- mandatory advising meeting to develop an ILP	- mandatory advising meeting to develop an ILP	
	- a required 3-week guided remediation period (as per Individualized Learning Plan) is required followed by a Make-up NBME	- a required 3-week guided remediation period (as per ILP) is required followed by a Make-up NBME	- “F” grade for clerkship
Knowledge Competency	Subject Exam once other core clerkships are completed	once other core clerkships are completed	
	- Student may earn up to a High Pass” for the clerkship once a pass is earned on the NBME	- multiple remediation periods must be done sequentially	
	-May not progress to Year 4 until NBME make-up exam is taken and passed	-Student earns a “Pass” for clerkship once a pass is earned on NBME	
		- May not progress to Year 4	

		until NBME make-up exam is taken and passed	
		- "I" grade for clerkship	
		- mandatory advising meeting to develop an ILP	
		- remediation of deficient element(s) as per ILP with mentoring during subsequent clerkship	
		- preceptor comments on deficient element	
		- May not progress to Year 4 until remediation complete	- "F" grade for clerkship
		- Must "Pass" the Clinical Skills Component of the subsequent clerkship	- Must "Pass" the Clinical Skills Component of the subsequent clerkship
		- "Pass" will be used to resolve the "I"	- "Pass" will be used to resolve the "I"
		- required to register for an elective in the same discipline as the failed clinical skills component to address discipline-specific deficiencies.	- required to register for an elective in the same discipline as the failed clinical skills component to address discipline-specific deficiencies.
		- "I" grade for clerkship	- "I" grade for clerkship
		- mandatory advising meeting to develop an ILP	- mandatory advising meeting to develop an ILP
		- remediation of deficient component during subsequent clerkship	- remediation of deficient element(s) as per ILP with mentoring during subsequent clerkship
		- Must "Pass" the Professional Behavior Component of the subsequent clerkship	- Must "Pass" the Professional Behavior Component of the subsequent clerkship
		- "Pass" will be used to resolve the "I"	- "Pass" will be used to resolve the "I"
		- once remediation is complete, the "F" will be replaced with a	- preceptor must comment on deficient component
Clinical Skills Competency			
Professional Behavior Competency			

"Pass" to determine the grade to replace the "I" - "Pass" will be used to resolve the "I"

- May not progress to Year 4 until remediation complete - May not progress to Year 4 until remediation complete

Grading scale for NBME clinical subject exams

An exam-specific performance grading scale will be applied to all NBME exam raw scores.

Based on NBME published percentiles and SGU percentiles determined annually, percentile-based cut-points (10th/50th/75th) will be used to assign grades (Pass/High Pass/Honors) for core clerkship NBME clinical subject exams.

The following grading scale will be used to assign a score for the clinical knowledge component of a core clerkship

	<10 th %ile	10 th -49 th %ile	50 th -74 th %ile	>74 th %ile
NBME Raw Score Cut-Points	Fail	Pass	High Pass	Honors
Medicine	<63	63 - 73	74 - 78	>78
Pediatrics	<66	66 - 76	77 - 81	>81
Ob/Gyn	<65	65 - 75	76 - 81	>81
Surgery	<62	62 - 73	74 - 78	>78
Psychiatry	<75	75 - 82	83 - 85	>85

The following grading scale will be used to assign a score for the clinical knowledge component of a Family Medicine/General Practice required rotation:

	<10 th %ile	10 th %ile or greater
NBME Raw Score Cut-Points	Fail	Pass
Family Medicine*	<65	65 and up
	Fail	

The average of the NBME national percentile data and the SGU SOM NBME percentile data for each of the six NBME clinical subject exams shall be used to determine whether a student obtained a grade of fail, pass, high pass, or honors for each of the core clerkship clinical subject exams or a pass/fail for the FM/GP clinical subject exams. This average of the NBME and SOM percentile data used to determine the grade of an individual student for each clerkship NBME shall be calculated using the percentile data of the previous academic cycle.

For core clerkships, obtaining an NBME clinical subject exam that ranks at the 10th percentile or above means the student earned a pass for the NBME clinical subject exam. Obtaining an NBME clinical subject exam score that ranks at the 50th to the 74th percentile means the student earned a High Pass. Obtaining an NBME grade that ranks at the 75th percentile or above means the student earned Honors.

For core the FM/GP required rotation, obtaining an NBME clinical subject exam that ranks at the 10th percentile or above means the student earned a pass for the NBME clinical subject exam.

Students must pass all required NBME Clinical Subject Exams in order to meet graduation requirements. The NBME Clinical Subject Exam (CSE) is the primary measure of a student's clinical knowledge in a core clerkship/required rotation and a required component of a student's clerkship/required rotation grade.

Remediation of Clinical Knowledge/NBME Failures

Performance on the NBME Clinical Subject Exams is the best predictor of student performance on the Step 2 CK examination required for US residency placement. Below is the new remediation plan for students who fail one or more NBME clinical subject exams:

Students who Fail the NBME Clinical Subject Examination

The NBME Clinical Subject Exam is a challenging exam for which students must prepare during their core clerkship. Unfortunately, some students do fail this required examination and will require remediation prior to taking the Step 2 CK exam and progressing to the 4th year of the MD Program.

First Failure

- Students who fail their core NBME clinical subject exam, will be required to remediate knowledge deficiencies, and take a make-up exam in the same discipline and earn a passing score. Upon failure of any core NBME clinical subject exam, students are required to contact their academic advisor to discuss remediation and the

repercussions of additional failures on the MD program and Step examination timelines.

- Any failed NBME core clinical subject exam will require a 4-week mandatory remediation period: 3 weeks during which knowledge deficiencies are remedied and one week during which the NBME Clinical Subject Exam in the failed discipline is re-taken (make-up exam). The 4-week mandatory remediation period will follow the completion of all core clerkships (at the end of the third year).
- The remediation period will be considered as either a bridge or a leave of absence. Students should discuss this with their clinical student coordinator, academic advisor and financial aid counselor.
- The NBME Clinical Subject Make-up Exam must be taken within the week following the end of the required 3-week remediation period (an 8-day period between the Saturday at the end of week 3 and the Sunday of the following week).
- At the start of the 4-week mandatory remediation study period students will receive an NBME permit to schedule the NBME Clinical Subject Make-up Exam during the 4th week.
- The NBME Clinical Subject Make-up Exam must be taken within this 1-week window.
- It is the student's responsibility to contact a Prometric center as soon as they are sent the NBME permit to ensure they schedule the NBME Clinical Subject Make-up Exam for a date that falls within the required 1-week window.
- Unless a Medical Excuse has been submitted (maximum 1 per calendar year), failure to schedule and take the NBME Clinical Subject Make-up Exam within the required 1-week window means students have not met all clerkship requirements and will, therefore, be issued a failing grade for the clerkship.
- Should students have multiple failed NBME Clinical Subject Exams (different disciplines), each 4-week mandatory remediation period and make-up examination must be undertaken sequentially, not concurrently.
- Due to the time and effort required for adequate clinical subject knowledge remediation, students with multiple failed NBME Clinical Subject Exams will not be permitted to start fourth year electives until

remediation is complete and all NBME Clinical Subject Make-up exams have been passed.

- Students may schedule their fourth year electives; however, will not be permitted to start until they fulfill all requirements for third year.
- Students who have failed the NBME Clinical Subject Exam for their final year 3 core clerkship and whose scheduled first elective is set to begin immediately following the last core clerkship will be permitted to complete the elective but will be required to cancel any other scheduled electives to accommodate all 4-week mandatory remediation periods.
- Students who fail NBME examinations are particularly at-risk of either failing or performing sub-optimally on the Step 2 CK and, as a result, negatively affecting their prospects for a residency match.
- Students will not be certified to take Step 2 CK until all year 3 requirements have been met. Therefore, students should note that if they fail one or more NBME Clinical Subject Exams and require remediation and make-up exams, they may be required to postpone their scheduled Step 2 CK to ensure remediation has been completed and all year 3 requirements are met prior to taking the Step 2 CK.
- Students should note that if they fail multiple NBME Clinical Subject Exams and require remediation and make-up exams, they will need to postpone their scheduled Step 2 CK to ensure remediation has been completed and all year 3 requirements are met prior to taking the Step 2 CK.

Second Failure

- Students who fail the make-up of a failed core NBME clinical subject exam, despite a remediation period, will require an additional remediation study period of 4 weeks followed by a second make-up exam in the failed discipline.
- The same details related to the first NBME Clinical Subject Exam failure apply to the remediation and make-up of the second exam failure.

Family Medicine/General Practice NBME

- The NBME Clinical Subject Exam in Family Medicine taken at the end of the required Family Medicine/General Practice clerkship

is a graduation requirement. This clerkship is taken in either the 3 year with the other core clerkships or in the 4th year with the other elective clerkships. Students who fail this NBME subject exam are expected to undertake a 4- week remediation of 3 weeks intensive study followed by an NBME clinical subject exam make-up in Family Medicine during the 4th week. Additional remediation periods will be required for all subsequent failures of the FM NBME examination. Students who fail the NBME clinical subject exam in Family Medicine must complete the remediation requirement and pass the make-up examination by the end of the 4th year in order to qualify for graduation.

The Review and Appeal Processes for Courses in Years Three and Four

1. **Clinical Knowledge Examinations:** Mastery reports of NBME clinical subject exams are provided to students by the NBME for review of areas of strength and weakness. The NBME results are official; however, students may make an appeal to the NBME for a retake/regrade. Students requesting a grade recheck may submit a request to the Office of the Dean, along with the \$25 fee required by the NBME. The Office of the Dean forwards the request to the NBME on behalf of the student. Unless the NBME voids the grade, it will stand.
2. **Clinical Skills Evaluations:** Students are provided with a formal opportunity for feedback on clinical skills during the mid-clerkship evaluation. Once the final student evaluation is posted, a student who believes a grading error has been made may submit a grade review request by email to the clerkship director (CD). The CD reviews the student's direct and indirect observation records, PELs, preceptor appraisals of performance, and evaluation rubrics to determine if an error has occurred that warrants a change of grade. The CD consults with the DME and associate dean of clinical studies to update the student's grade. The result of the grade review is reported back to the student via email
3. **Professional Behavior Evaluations:** Students are provided with a formal opportunity for feedback on professional behavior during the mid-clerkship evaluation. Once the final

student evaluation is posted, a student who believes a grading error has been made may submit a grade review request by email to the CD. The CD reviews the student's direct and indirect observation records, preceptor appraisals of performance, and evaluation rubrics to determine if an error has occurred that warrants a change of grade. The CD consults with the DME and associate dean of clinical studies to update the student's grade. The result of the grade review is reported back to the student via email

Assessment of Other Rotations

Electives, sub-internships and Family Medicine (General Practice in the UK) rotations are graded on a pass-fail basis but require narrative comments. These narrative comments will be used in the MSPE. The assessment is based on a student's daily performance in terms of knowledge, skills and professional behavior. Credit can be given only after receipt of the student's Certificate of Completion of Elective Form (Appendix F).

Review of Academic Progress for MD Program

Clinical APRC reviews: The APRC conducts reviews at least bimonthly to identify students who are at risk of not meeting performance/timeline standards for progress to the next rotation or for graduation. Students are sent notices/reminders of their requirements and referred to their primary advisors for monitoring and support. Additionally, the senior associate dean of clinical studies is notified when a student fails a clerkship component. This sets in motion a structure for advising and remediating the student's deficiencies. The student and the primary advisor develop a learning plan, which the student will put into effect for the subsequent clerkship to avoid future failures.

The APRC will make recommendations to the Senior Associate Dean of Clinical Studies for a student's progression, promotion, or dismissal. Students with previous failures to meet standards and/or timeline delays may be granted an additional time to achieve standards and complete requirements or be recommended for dismissal. Students may be issued a reminder, notice, warning, or recommendation for dismissal from the office of Senior Associate

Dean of Clinical Studies (clinadmin@sgu.edu). These letters may require action on the part of a student, a failure to act on APRC requests or to fulfill APRC requirements may result in a recommendation for dismissal.

Letters may stipulate deadlines and requirements students must meet in order to continue in the MD program including mandatory advising meetings to discuss program requirements and standards, identify obstacles to progress, consider opportunities for improvement, and develop an individualized learning plan (ILP).

In these cases, the APRC also places students on a MAS, those students who fail a clerkship or clerkship component. Based on assessments throughout the MD Program, SGU School of Medicine graduates those students that have developed the competencies intended by the Outcome Objectives.

Appeal Process and the Clinical Capps

All students who are recommended for dismissal have the opportunity to appeal to the CAPPS. Students preparing their appeal and related documentation should note that this is the *only* opportunity to appeal the recommendation for dismissal. Therefore, any student recommended for dismissal is required to meet with the Dean of Students for guidance on the appeal process.

The Committee for Academic Progress and Professional standards is charged with the following responsibilities:

1. review appeals from students that have been recommended for dismissal by the senior associate dean of basic sciences or the senior associate dean of clinical studies, based on failure to meet academic performance and/or professional standards.
2. uphold the recommendation for dismissal, in which case students have the option to withdraw or will be dismissed, or
3. accept the appeal and retain the student on a period of academic focus or probation with conditions.
4. establish the conditions under which a student is to be retained, including defining the period of academic focus and associated conditions

5. communicate the outcome of each appeal in the form of a letter to the student, with copies to the appropriate senior Associate dean, dean of the School of Medicine, Registrar, and dean of Students Office.
6. act as the sole body to which a student may appeal a recommendation for dismissal.
7. refer students whose appeals are not upheld to the DOS office, for further guidance on career options

CAPPS is the final point of appeal, and decisions of the Basic Sciences or clinical CAPPS are final. The School of Medicine has no further provision for appeal.

Section Nine: the Core Clerkships

Internal Medicine

1. MISSION AND INTRODUCTION

Description of the Core Clerkship in Internal Medicine

The Medicine rotation teaches a logical and humanistic approach to patients and their problems. This process begins with a presenting complaint, through a comprehensive history and physical examination, to the formulation of a problem list, assessment of the problems including a differential diagnosis, a plan for definitive diagnosis and therapy, as well as an assessment of the patient's educational needs.

While this sequence is applicable to all specialties in the clinical years, Medicine carries the major responsibility for teaching this clinical approach, thus forming the cornerstone of study in the clinical terms, regardless of a student's future interests

These twelve weeks expose the student to a wide range of medical problems. Skills in processing and presenting data to preceptors, peers and patients are assessed and refined. In addition, the clerkship introduces system based practice, practice based learning and improvement and cultural sensitivity and competency. The student learns the unique aspects of providing care for the elderly and those at the end of life. This includes the special needs of the elderly regarding multiple medication interactions,

physical fragility and changes in cognition. The student learns interpersonal and communication skills and how to relate to patients, families and all members of the health care team in an ethical and professional manner.

Students accomplish the goals of the clerkship by extensive contact with many patients, conferences, lectures, bedside rounds and discussions with preceptors, residents and consultants, write-ups, case presentations, review of laboratory work, x-rays and imaging procedures, web-based educational programs as well as a prodigious amount of reading. The Department of Medicine places special emphasis on developing student skills not only in history taking, physical examination and written and oral case presentation, but also in understanding the pathophysiology of disease and in developing a problem list and a differential diagnosis. Humanism in Medicine is stressed throughout the clerkship as it will form an integral part of any physician's life.

2. GUIDELINES

- Length: twelve weeks.
- Site: in-hospital medical services and out-patient facilities. Students may also rotate through nursing homes, sub-acute nursing facilities or other similar places where healthcare is delivered.
- Orientation at the start of the clerkship: this should include an introduction to the key faculty and coordinators, a tour of the facilities, distribution of schedules, discussion of the expectations and responsibilities of the clerk, the general department and student schedule and the assignment to residency teams and preceptors. Students should be made aware of the contents of the CTM and the goals and expectations of the clerkship as a comprehensive learning experience. The SGU Clerkship Director in Medicine and preceptors are responsible to review and discuss the educational goals and objectives of the clerkship set forth in this manual before each rotation. In addition there must be emphasis on developing communication skills, discussion of manual skills requirements and discussion of professional behavior.
- Schedule: all day Monday through Friday; night, weekend and holiday call with residency teams as assigned. Approximately 30% of the Clerkship should

be allocated to protected academic time for teaching conferences and structured independent study.

- Attending rounds for house staff and students at least three times per week.
- A full schedule of teaching conferences including grand rounds, subspecialty conferences and didactic sessions pertinent to the needs of the students.
- Preceptor sessions at least four hours per week to include case presentation by students and bedside rounds. These sessions should include a teaching physician and students only. At least one hour should be structured as a question based session (MKSAP).
- Students are expected to complete 600 IM UWorld questions over the course of the 12 week rotation.
- Six comprehensive write-ups are required over the course of the clerkship. These write-ups should include a comprehensive history, a physical exam, a review of relevant laboratory and imaging data, and a comprehensive problem list, with diagnostic, therapeutic and educational plans. This assessment should require considerable supplementary reading. The preceptor must read and critique these write-ups and return them to the student in a timely fashion. This timely interaction among faculty and student is an essential and core responsibility of the preceptor faculty. In addition, students must submit 2 “focused” write-ups – max 2 pages – based on clinical situations where a new problem arises in the course of hospitalization. These write-ups should include key historical features, relevant physical exam, pertinent laboratory data; and diagnostic assessment and plan for the patient.
- A mid-term evaluation of each student’s performance is an important part of the rotation. This must include a review of the student’s patient log, a review of the student evaluations submitted by residents and attending who have had contact with the student, and a thorough discussion of the student’s strengths and weaknesses with advice as to how the student may improve. Students will also be expected to take a “practice” NBME shelf exam (self-evaluated) at the midpoint of the clerkship.

A final summative final assessment, conducted by the Clerkship director (or his/her designee), will be scheduled during the last week of the

rotation. The final assessment will take in account the midcore, resident and preceptor feedback, review of PEL and required web-based courses.

3. EDUCATIONAL OBJECTIVES

The twelve-week core clerkship in internal medicine is based in acute care medical centers or appropriately designed and accredited ambulatory care facilities. The curriculum is designed to provide students with formal instruction and patient care experience so as to enable them to develop the knowledge, skills and behavior necessary to begin mastering the following clinical competencies essential to becoming a knowledgeable, complete and caring physician.

Students gain these and the additional skills outlined below by functioning as integral members of the patient care team, participating in resident work rounds and teaching attending bedside rounds every weekday and admitting patients when on-call and following them until discharge under the continuous supervision of the residents. Additional activities include meetings with their preceptors at least four hours per week (conferences for students only), attendance at daily didactic conferences and independent learning including completing web-based education assignments. An orientation at the start of the clerkship outlines the educational goals and objectives of the clerkship as well as the responsibilities of third year clerks, and assignments and schedules. Clerks are provided feedback regularly on their progress as well as during both midcourse and final summative reviews with their preceptor or clerkship director.

MEDICAL KNOWLEDGE

1. Demonstrate knowledge of the principal syndromes and illnesses in Internal Medicine, their underlying causes both medically and socially and the various diagnostic and therapeutic options available to physicians in the care of their patients and in the care of populations.
2. Develop an understanding of the cognitive processes inherent in clinical reasoning.
3. Utilize the principles of diagnostic clinical reasoning, including: translating patient information into medical terminology,

becoming familiar with “illness scripts,” utilizing semantic qualifiers, and generating a prioritized differential diagnosis.

4. Demonstrate knowledge of the indications for and the ability to interpret standard diagnostic tests, e.g.; CBC, chemistries, chest x-rays, urinalysis, EKGs, as well as other relevant specialized tests.
5. Recognize unusual presentations of disease in elderly patients and demonstrate understanding of the complexity of providing care for the chronically ill with multiple medical problems. This should include an understanding of end of life issues, as well as bioethical, public health, epidemiologic, behavioral and economic considerations which arise in our health care system.
6. Demonstrate knowledge of the indications for various levels of care post-discharge, e.g., short and long term rehabilitation, long-term skilled nursing facility care, hospice, home care, etc.

CLINICAL SKILLS

1. Take a comprehensive history and perform a complete physical exam.
2. Formulate a comprehensive problem list, differential diagnosis; and articulate a basic therapeutic plan, employing concern for risks, benefits, and costs.
3. Analyze additional clinical information, lab tests and changes in patients' clinical status; note changes in the differential diagnosis or in the diagnostic or therapeutic plans as circumstances and test results change.
4. Begin to develop proficiency in basic procedures, such as venipuncture, arterial puncture, naso-gastric tube insertion, insertion of intravenous lines, urinary bladder catheterization, etc.

COMMUNICATION SKILLS

Verbal:

- Basic competence in comprehensive case presentation
- Basic competence in focused case presentation
- Basic competence in explaining to a patient a simple diagnostic and therapeutic plan (e.g.; Community Acquired Pneumonia in a healthy 40 yr. old)
- Basic informed consent scenario for a procedure (e.g.; contrast enhanced CTS)

- Basic competence in safe transitions of care (i.e., sign outs, rounds and transfer of care)

Written:

- Competence in comprehensive case write-ups
- Competence in brief case write-ups (e.g. focused CS exercise)
 - **Communication (Drexel) Modules:**
- 33 Giving Bad News
- 32 Advance Directives

PROFESSIONAL BEHAVIOR

- Demonstrate a regimen of independent learning through the reading of suggested basic texts, research via the Internet and through other electronic resources, e.g., Up-To-Date, maintenance of the patient encounter log and completion of the web-based educational program requirements.
- Identify personal strengths and limitations.
- Demonstrate a commitment to quality, including awareness of errors, patient safety and self-directed improvement.
- Demonstrate competency and comfort in dealing with people of varying racial, cultural, and religious backgrounds
- Demonstrate a commitment to treating all patients, families and other caregivers with respect and advocate for their welfare.
- Participate fully with the patient care team and fulfill all responsibilities in a timely fashion.
- Maintain a professional appearance and demeanor
- Demonstrate facility in working in concert with other caregivers including nutritionists, social workers and discharge planners to obtain optimal, seamless multidisciplinary care for patients, both during the hospitalization and after discharge.

4. CORE TOPICS & PATIENTS

Students should make every effort to see patients with conditions listed below. This list is based on “Training Problems” published by the Clerkship Directors of Internal Medicine.

1. The healthy patient: health promotion and education, disease prevention and screening.
2. Patients with a symptom, sign or abnormal laboratory value
 1. Abdominal pain

2. Altered mental status
3. Anemia
4. Back pain
5. Chest pain
6. Cough
7. Chronic pain
8. Dyspepsia
9. Dyspnea
10. Dysuria
11. Fever
12. Fluid, electrolyte, and acid-base disorders
13. GI bleeding
14. Hemoptysis
15. Irritable bowel
16. Jaundice
17. Knee pain
18. Rash
19. Upper respiratory complaints
20. Weight loss
3. Patients presenting with a known medical condition.
 1. Acute MI
 2. Acute renal failure and chronic kidney disease
 3. Asthma
 4. Common cancers
 5. COPD
 6. Diabetes mellitus
 7. Dyslipidemia
 8. CHF
 9. HIV
 10. Hypertension
 11. Inflammatory bowel disease
 12. Liver disease
 13. Nosocomial infection
 14. Obesity
 15. Peptic ulcer disease
 16. Pneumonia
 17. Skin and soft tissue infections
 18. Substance abuse
 19. Thyroid disease
 20. Venous thromboembolism
 21. Geriatric Issues
 22. Cognitive Impairment
 23. Osteoporosis
 24. Polypharmacy
 25. Incontinence
 26. Falls, gait and balance problems
 27. Failure to thrive
 28. Pressure ulcers
 29. Sensory impairments
 30. Sleep disorders
 31. Depression
 32. Pain
 33. Elder abuse and neglect
 34. End-of-life

5. READING

Reading should proceed on four levels, each with a different goal.

- Reading about your patient in order to “learn from your patients” and to develop a deeper understanding of the comprehensive issues affecting patient diagnosis and care.
- A systematic and thorough reading about the overall field of internal medicine in order to prepare for the end of clerkship shelf exam and the Step 2 CK. This cannot be over emphasized.
- Detailed in depth reading about specific topics of interest and for assignments.
- A review of basic science and relevant research in order to reinforce the fundamental principles of clinical medicine and understand advances in patient care.
- Students can choose from a large number of comprehensive texts book of medicine, medical sub-specialty texts, journal review articles and internet resources to read as outlined above.

6. WEB BASED EDUCATIONAL ASSIGNMENTS FOR INDEPENDENT LEARNING

The school requires the successful completion of web-based assignments:

- Firecracker
- I-Human
- Uworld
- Communication modules
- Ethics Modules
- Geriatrics readings

Most web based assignments include Sakai quizzes that require a scores of 80% or greater in order to receive credit for this clerkship. Students are required to log into each clerkship’s Sakai site to see these assignments. The Office of the Dean monitors student performance on these assignments. The completion of these assignments will be sent to the Clerkship Directors for incorporation into the final clerkship grade. The clinical faculty feels these assignments are excellent preparation for the NBME clinical subject exams as well as Step 2. In addition, a student’s diligence in completing these assignments reflects a commitment to excellence, a component of professional behavior grade.

Required Clinical Encounters and the Patient Encounter Log

The below list of complaints and diagnoses must be entered into your Patient Encounter Log (PEL) Program during each Core and Family Medicine Clerkship

Link: PEL <https://myapps.sgu.edu/PEL/Admin/Account/Login?ReturnUrl=%2fPEL>

The faculty in each specialty have identified specific clinical experiences that are a requirement for the clerkship. The PEL program is designed to track each student's patient encounters, clinical setting in which the encounter occurs, and level of responsibility. This program allows the school to standardize the curriculum. All patient's complaints and/or diagnosis encountered during clinical rotations must be entered into the (PEL) program. Entering the required clinical encounters "Must See List" is required during clinical rotations and will be displayed to the clerkship director for review on the final clerkship evaluation. Whenever possible incorporate the Communication Skill course topic for each required encounter. Never place patients' names or any patient identifying information in this program, this would be a HIPPA violation.

If students are unable to see a required clinical encounter, they must view the virtual visit link and watch the video. Once the encounter video is viewed, add the virtual encounter in the PEL as a Virtual visit.

Internal Medicine

Obstetrics and Gynecology Core Clerkship

The Department of Obstetrics and Gynecology offers an educational experience, which entails close interaction with house staff and faculty, and a 'hands-on' approach to learning by doing. A physician specializing in obstetrics or gynecology is often considered a woman's primary care provider. With this in mind, students are encouraged to learn not only obstetrics and gynecology but anything involved in women's health in general. Over the six-week clerkship most students will encounter, through their patients, a multitude of clinical problems. It is anticipated that the knowledge gained in

learning about and solving a particular patient problem will be retained and applicable to other patients with similar problems.

Obstetrics and gynecology is a fast-paced, diverse field of medicine practiced in a variety of settings, both outpatient and inpatient. As a clerk on our service, you will have the opportunity to see patients who are healthy, seeking prenatal or preventive care, those who are having an acute life-threatening gynecologic problem and everything in between!

Our goal is to provide you with a well-rounded, solid experience in general obstetrics and gynecology. Each student will spend time on labor and delivery, in the operating room participating in gynecologic surgery and in the outpatient setting. You may have the opportunity to work with subspecialists including Reproductive Endocrinologists, Gynecologic Oncologists, Maternal-Fetal Medicine specialists and more.

It is not the purpose of the rotation to prepare students for an ob/gyn residency but rather to assure that graduates will be competent to initiate a level of care for women that routinely addresses their gender-specific needs. Consequently, the clerkship curriculum is competency based, using practice expectations for a new intern pursuing a primary care residency as the endpoint.

The ob/gyn clerkship requires that students record their patient contacts in the school's online patient encounter log. Along with your hands on experience, your learning will be augmented by web based resources.

- Firecracker
 - Students can start on either the obstetric floors for the first 3 weeks then the Gynecology clinics the last 3 weeks or vice versa, we would like students to study the topics in the correct order. (If you are not sure start with obstetrics first). Therefore, students must determine which sequence of topics to study. Students should wait until the first day of orientation before choosing.
 - The following choices will be available in Firecracker SGU Clerkship selection:
 - OB/GYN I - covers OB topics first
 - OB/GYN II - covers GYN topics first
- UWorld Ob/Gyn Qbank

- Communication Modules - Domestic Violence and Exploring Sexual Issues modules must be completed prior to completing the clerkship.
- Ethics modules
- I-Human

Your patient log along with these three web-based resources will constitute your ob/gyn portfolio included in your final evaluation.

We hope that you become familiar with what the general obstetrician/gynecologist does, have the opportunity to be exposed to common obstetric and gynecologic procedures, solidify pelvic exam skills and learn about important topics in women's health to serve you in whatever specialty you ultimately choose.

We are looking forward to meeting you, getting to know you and teaching you.

Portions of this overview were based on the University of North Carolina and University of Florida clerkship overview.

1. MISSION AND INTRODUCTION

- To provide a curriculum for the department that promotes the highest standards of competence and does so in a professional culture that prepares the student for the practice of the discipline internationally.
- To provide a foundation which integrates the basic science in the understanding of normal and abnormal pregnancy as well as the causes, diagnosis, prevention and treatment options for diseases of the female reproductive system and to the problems of women's health generally.
- To provide a solid foundation in the discipline of obstetrics and gynecology that will enable the student to decide if the discipline is an appropriate career choice and if so to enable the student to succeed in postgraduate training and a professional career as an obstetrician gynecologist.
- To combine medical knowledge with clinical and communication skills providing a solid foundation on which students can learn to provide quality obstetrical and gynecologic care. The curriculum of the department of obstetrics and gynecology is designed to assist students in achieving the following educational goals:
- To understand the role played by the obstetrician/gynecologist within the scope

of women's health care and when medical issues outside their expertise requires a medical or other specialty consultation.

- To gain a base of knowledge in normal as well as abnormal obstetrics and gynecology and acquire the skills needed to evaluate and treat patients responsibly.
- To learn the value of routine health surveillance as a part of health promotion and disease prevention by incorporating age-appropriate screening procedures at the recommended time intervals.
- Through the use of written and clinical cases, to acquire a knowledge base in the causes, mechanisms and treatment of human reproductive illnesses, as well as in the behavioral and non-biological factors that influence a woman's health.
- To demonstrate a fundamental knowledge of the most common clinical, laboratory, and pathologic diagnostic manifestations of diseases common to women.
- To gain an understanding of the principles of bioethics and how they affect patient care.
- To become aware of the effect of health care disparities on patient care.

2. GUIDELINES

1. **Length: minimum six weeks.**
2. Site: Labor and delivery suite including ob triage, the operating room, gynecology inpatient units and the ante-partum, post-partum and post-operative units, outpatient clinics, private MD offices and the Emergency Department.
3. At the start of the clerkship, an orientation is given. This includes a discussion of the expectations and responsibilities of the students and their schedules and assignments to residency teams and preceptors. The SGU clerkship director for Obstetrics and Gynecology and the student coordinator participate in this orientation. During the Orientation students will be advised how to obtain scrubs, lab coats, and ID Badges and a tour of the Ob/Gyn areas including call rooms.
4. Students take night call no more than every third night, and one weekend call not to exceed 24 hours or one night float schedule, not to exceed residents' hours on call. The student will do a maximum of 6 calls during the 6 week rotation

5. Students participate in attending rounds for house staff and students at least once a week and work rounds with house staff at least twice a week.
6. A schedule of teaching conferences including staff conferences, residents' conferences, grand rounds, subspecialty conferences and didactic sessions pertinent to the needs of the students is presented at the orientation. Approximately 30% of the clerkship should be allocated to protected academic time for teaching conferences and structure independent study.
7. Each student is required to complete a minimum of two clinical write-ups, including one obstetrical and one gynecological case. Each write-up must include the admission history, physical examination, review of laboratory and imaging studies impression, assessment and diagnostic/therapeutic plan. The history must include any cultural issues that may affect the patient's treatment and compliance. Students must include a discussion of the patient's social supports and any recognizable limits of the doctor-patient relationship, e.g. beliefs. The write-up should also mention any limitation of the patient: mental, physical, financial or emotional. When pertinent, the labor and delivery record, operative findings, post-operative progress notes, and pathology should be included. Each clinical write-up will include a one page summary of the topic chosen by the student on any aspect of the clinical case study. This requires a literature search to respond to the clinical question posed by the student. Critiques of the write-ups are provided to the student by the preceptor. Each student will do a case presentation based on an interesting topic that was encountered during her/his rotation.
8. Direct preceptor/faculty supervision of the students for at least 3-4 hours per week should include case presentations by the students, bedside rounds, physical examinations and interactive sessions.
9. A formal one-on-one mid-core evaluation is required. The student is required to bring all case evaluations, write-ups and the student log to the meeting. This is required to be reported to the DME with a signature acknowledgement by the student.
10. Each student will maintain an electronic log of all required clinical experiences with diagnosis they admit, evaluate or follow.

11. All students must take the NBME Clinical Subject Examination in ob/gyn during the last week of the rotation. They must have the day off prior to the exam as well as the day of the exam. If you do not take the exam, you have to take it within one week.
12. Special emphasis is placed on the development of certain skills. By the completion of the clerkship, the student should be able to competently perform a complete history relevant to the obstetric/gynecologic patient and a physical examination of the breast and pelvis. (These examinations must always be performed only when a "chaperone" is present.)

3. EDUCATIONAL OBJECTIVES *

Medical Knowledge: *The student will learn:*

1. Health maintenance and preventive care for women, including age-related issues in cancer screening, screening for other common adult-onset illnesses, nutrition, sexual health, vaccination and risk factor identification and modification.
2. Acute and chronic conditions common in women's general and reproductive health, including their diagnosis and treatment.
3. Principles of physiology and pharmacology applicable to women from puberty through their reproductive life and menopause, especially pregnancy and age-related changes.
4. Prenatal, intra-partum and post-partum care of normal pregnancy and common pregnancy-related complications as well as the care of women with acute or chronic illness throughout pregnancy.

Clinical Skills: The student will demonstrate competence in:

1. **Communication skills:** Interacting effectively and sensitively with patients, families, and with health care teams in verbal and written presentations. Recognize the important role of patient education in prevention and treatment of disease.
2. **Verbal Presentations:** Organize a case presentation to accurately reflect the reason for the evaluation, the chronology of the history, the details of physical findings, the differential diagnosis and the suggested initial evaluation. Include age specific information and precise description of

physical findings. Justify the thought process that led to the diagnostic and therapeutic plan.

3. **Written Documentation:** Document the independent clinical thinking of the student. When using templates, or their own prior documentation, students should carefully adjust the note to reflect newly completed work and to ensure the note is a useful addition to the medical record. In settings where students are not permitted to document in the EMR, an alternative form of documentation needs to be established and evaluated by a preceptor.
4. **History Taking:** patients in more complex situations such as in the emergency and labor setting, collecting complete and accurate information and focusing appropriately. Describe how to modify the interview depending on the clinical situation-inpatient, outpatient, acute and routine settings including Physical Exams which are complete and focused depending on the indication and condition.
5. **Clinical Problem Solving:** Using data from history, physical, labs and studies to define problems, develop a differential diagnosis, and identify associated risks.
6. **Clinical Decision Making:** Incorporating patient data with patient needs and desires when formulating diagnostic and therapeutic plans incorporating cultural and ethical issues.
7. **Evidence - Based Medicine:** Ability to conduct an evidence-based search surrounding a specific clinical question and to appropriately evaluate the literature to answer such question.
8. **Self-Education:** Recognizing knowledge deficits and learning needs through a reflective self-assessment process, plan or seek assistance in strengthening knowledge deficits, develop key critical thinking and problem solving skills. Seek feedback.

Professional Behavior: The student will be expected to:

1. Demonstrate compassion, empathy and respect toward patients, including respect for the patient's modesty, privacy, confidentiality and cultural beliefs.
2. Demonstrate communication skills with patients that convey respect, integrity, flexibility, sensitivity and compassion.

3. Demonstrate respect for patient attitudes, behaviors and lifestyle, paying particular attention to cultural, ethnic and socioeconomic influences and values.
4. Function as an effective member of the health care team, demonstrating collegiality and respect for all members of the health care team.
5. Demonstrate a positive attitude and regard for education by demonstrating intellectual curiosity, initiative, honesty, responsibility, dedication to being prepared, maturity in soliciting, accepting and acting on feedback, flexibility when differences of opinion arise and reliability.
6. Identify and explore personal strengths, weaknesses and goals.
 1. These objectives are based with permission on the 3rd year Ob/Gyn clerkship objectives from the University of Michigan Ob/Gyn

WEB BASED EDUCATIONAL ASSIGNMENTS FOR INDEPENDENT LEARNING

The school requires the successful completion of web-based assignments in order to receive credit for this clerkship. Students should log into Sakai and complete the following assignments:

- Firecracker
- Uworld
- I-Human
- Communication Modules
- Ethics Modules

The Office of the Dean monitors student performance on these assignments. The completion of these assignments will be sent to the Clerkship Directors for incorporation into the final clerkship grade. The clinical faculty feels these assignments are excellent preparation for the NBME clinical subject exams as well as Step 2. In addition, a student's diligence in completing these assignments reflects a commitment to excellence, a component of professional behavior grade.

CORE TOPICS

General

1. History
2. Physical exam
3. Patient write up

4. Differential Diagnosis and management plan
5. Preventive care
6. Professional behavior and communication skills
7. Domestic violence and sexual assault

Obstetrics

1. Maternal-fetal physiology
2. Preconception care
3. Antepartum care
4. Intrapartum care
5. Care of Newborn in labor and delivery
6. Postpartum care
7. Breastfeeding
8. Abortion (spontaneous, threatened, incomplete, missed)
9. Hypertensive disorders of pregnancy
10. Isoimmunization
11. Multifetal gestation
12. Normal and abnormal labor
13. Preterm labor
14. Preterm rupture of membranes
15. Third trimester bleeding
16. Postpartum hemorrhage
17. Postdates pregnancy
18. Fetal growth restriction
19. Antepartum and intrapartum fetal surveillance
20. Infection

Gynecology

1. Ectopic pregnancy
2. Contraception
3. Sterilization
4. Abortion
5. Sexually transmitted diseases
6. Endometriosis
7. Chronic pelvic pain
8. Urinary incontinence
9. Breast disease
10. Vulvar disease and neoplasm
11. Cervical disease and neoplasm
12. Uterine disease and neoplasm
13. Ovarian disease and neoplasm

Endocrinology and Infertility

1. Menarche
2. Menopause
3. Amenorrhea
4. Normal and abnormal uterine bleeding
5. Infertility
6. Hirsutism and Virilization

READING

Students should use the most recent edition of the following textbooks:

Required

- Obstetrics/Gynecology for the Medical Student
- Beckman, et al Lippincott Williams & Wilkins

Supplementary

- Williams Obstetrics

Cunningham et al, Appleton

- Danforth's Obstetrics and Gynecology

Scott et al Lippincott, Williams and Wilkins

- Clinical Gynecologic Oncology

DiSaia & Creasman, Mosby

- Gynecology by Ten Teachers and Obstetrics by Ten Teachers

Monga & Baker, Arnold

- Problem Based Obstetrics and Gynecology

Groom and Cameron, Blackwell

- Reproductive Endocrinology

Speroff et al, Lippincott Williams and Wilkins

Other Helpful Review Texts:

- OB/GYN Mentor: Your Clerkship and Shelf Exam Companion

Benson, F. A. Davis Company

Required Clinical Encounters and the Patient Encounter Log

The list below of complaints and diagnoses must be entered into your Patient Encounter Log (PEL) Program during each Core and Family Medicine Clerkship

Link: PEL <https://myapps.sgu.edu/PEL/Admin/Account/Login?ReturnUrl=%2fPEL>

The faculty in each specialty have identified specific clinical experiences that are a requirement for the clerkship. The PEL program is designed to track each student's patient encounters, clinical setting in which the encounter occurs, and level of responsibility. This program allows the school to standardize the curriculum. All patient's complaints and/or diagnosis encountered during clinical rotations must be entered into the (PEL) program. Entering the required clinical encounters "Must See List" is required during clinical rotations and will be displayed to the clerkship director for review on the final clerkship evaluation. Whenever possible incorporate the Communication Skill course topic for each required encounter. Never place patients' names or any patient identifying information in this program, this would be a HIPPA violation.

If students are unable to see a required clinical encounter, they must view the virtual visit link and watch the video. Once the encounter video is viewed, add the virtual encounter in the PEL as a Virtual visit.

Ob/gyn

Pediatrics CORE CLERKSHIP

MISSION AND INTRODUCTION

The clerkship in pediatrics provides a learning experience that fosters the highest standards of professional behavior based on principals of bioethics. It will provide students with a clinical experience that prepares them to communicate effectively with patients and families and learn to evaluate and manage children from newborn through adolescence.

The clerkship integrates a foundation of medical knowledge with clinical and communication skills to enable the student to identify and provide quality pediatric care.

After completion of a six week core rotation during the third year, students will demonstrate a firm understanding of the competencies required to evaluate and provide care for children who are sick and well.

The six-week core clerkship allows students to gain clinical experience in evaluating newborns, infants, children and adolescents, both sick and well, through clinical history taking, physical examination and the evaluation of laboratory data. Special emphasis is placed on: growth and development, nutrition, disorders of fluid and electrolytes, common infections, social issues, and preventative care including: immunizations, screening procedures, anticipatory guidance. The student will develop the necessary communication skills to inform, guide and educate patients and families.

Pediatric ambulatory and in-patient services provide an opportunity to observe and enter into the care of pediatric medical and surgical disorders. The student will learn how to approach the patient and family and communicate effectively as they take admission histories and perform physical examinations. They will then provide the patient and parents with the necessary information and guidance to understand and support the child through the time of illness. The student will learn age specific skills regarding interviewing pediatric patients and relating to their parents, and will develop the skills necessary to examine children from newborn through adolescence utilizing age appropriate techniques. The adequacy and accuracy of the students' knowledge, communication skills, manual skills and professional behavior will be measured and evaluated by their supervising physicians, residents and preceptors. There will be formative evaluations and discussion of the students' progress throughout the rotation with emphasis on a formal mid-core and end-core assessment.

It is expected that there be full and active participation in the multiple learning opportunities: didactic learning, clinical seminars, self-directed learning modules, patient rounds, conferences. Preceptor sessions are mandatory and take precedence over all other clinical activities. Students should excuse

themselves from their other assignments and attend their preceptor session, unless excused by their preceptor. All of these components are designed to expand the student's concept of how to provide quality care for pediatric patients.

In the out-patient services, the student learns the milestones of growth and development, infant feeding, child nutrition, preventative care (including immunization, screening procedures, and anticipatory guidance), the common ailments of childhood and diagnosis of rare and unusual illnesses. In the pediatric sub-specialty clinics, the student will observe the progression and participate in the management of a wide variety of serious and chronic pediatric illnesses.

Emergency department and urgent care experiences permit the student to be the first to evaluate infants and children with acute illnesses. Emphasis is placed on the evaluation of febrile illnesses, and common emergencies of childhood (e.g. poisonings, injuries).

The initial management of the newborn is learned in the delivery room. Students then practice the examination of the newborn and learn about the initiation of feeding, neonatal physiological changes, and common newborn conditions. In the newborn intensive care unit, the student is an observer of the management of the premature and term infant with serious illness. Emphasis is placed on observing and understanding the role of the pediatrician in the multidisciplinary team approach to critical care.

These experiences are designed to provide maximum contact between students and patients and their families. The student should use every opportunity to practice communication skills, improve their ability to perform accurate and concise histories, perform physical examinations, expand their knowledge of pediatric diseases, and attain skills in utilizing laboratory and radiologic evaluations most effectively.

GUIDELINES

1. **Length: minimum of six weeks.**
2. Sites: general pediatric unit, ambulatory care unit, pediatric emergency department, nursery, NICU, PICU, private office practice, additional sites, as available.
3. At the start of the clerkship an orientation is given. The SGU clerkship director or designee discusses the program's goals

and objectives, the responsibilities of the clerk, the schedule and assignments to preceptors and residents. The student is introduced to the key preceptors and staff members in the department.

4. The student must participate in the night, weekend, and holiday on-call schedules. The clerkship director will set the number and timing of calls.
5. The student must attend scheduled clinical conferences, grand rounds, subspecialty conferences, and learning sessions. Approximately 30% of the clerkship should be allocated to protected academic time for teaching conferences and structured independent study.
6. A preceptor meets with students at least twice a week for a minimum of three hours per week. The preceptor sessions will include clinical discussions that focus on problem solving, decision making and adherence to bioethical principals.
7. The student is involved in all patient care activities in the out-patient facility and inpatient unit.
8. The student will be observed, and given immediate feedback, as they take a history and perform a physical examination on a newborn and a child.
9. As an absolute minimum, each student should examine five term newborns. This includes reviewing the maternal medical record, performing a physical examination on the infant, and talking with the parent about basic care of the newborn and anticipatory guidance.
 1. Pediatric students have required clinical experiences that must be entered into the Patient encounter log. There is an additional requirement that medical students learn how to identify and report child abuse/neglect. There should be involvement in a case where a child is suspected as being the victim of child abuse/neglect or where the differential diagnosis includes child abuse/neglect. If such a case does not present itself, a virtual case may be used. There should be a discussion of the recognition and reporting requirement and the child protection response and services.
 2. Involvement in these cases should include taking a history, performing a physical examination, discussing the differential diagnosis, formulating a plan for laboratory/radiologic studies

and deciding on a treatment plan. These cases may be from the inpatient units, the nursery, the Emergency Room, or the out-patient setting.

3. Depending on circumstances, participation may be limited to that as an observer, especially in cases of sexual abuse, or the use of a virtual case.
4. As an absolute minimum, each student will participate in the care of two adolescents. This includes taking a history and performing a physical examination as well as reviewing the immunization record and assessing the adolescent's health, behavior, educational and environmental issues. It is preferable that one of the two adolescents described will have a chronic illness.
10. The student will give at a minimum, one major presentation during the rotation. The presentation will be evaluated by the preceptor.
11. A minimum of four complete clinical write-ups is required per student. These write-ups will be critiqued by the preceptor and returned to the student in a timely manner. It is preferable that the patients selected for these write-ups be examples of the case mix listed in guideline#9 above. The write-ups will be handed in at intervals during the rotation and returned promptly so that the student can improve their written expression.
12. The student will keep a Patient Encounter Log. The log will list all of the patients that the student has had direct contact with. The log should reflect a commitment to accurate record keeping and reflect knowledge of the case.
13. Each student will have a formative mid-core evaluation with a review of their Patient Encounter Log, case write-ups and Firecracker quizzes to the session. The Log will be reviewed for completeness, quality and mix of cases. The student's professional behavior will be addressed, as well as progress in attaining the knowledge and skills required to evaluate a patient. There will be appropriate comments and suggestions given to the student to guide them toward improvement.
14. The student will use the patient encounter log to record manual skills and procedures performed or witnessed.

1. The following procedures are recommended to be performed or witnessed during the Pediatric rotation:

1. vision and hearing screening
 2. otoscopy
 3. administration of inhalation therapy (Metered Dose Inhaler/MDI/Spacer/Nebulizer).
 4. throat culture
 5. immunizations: intramuscular injection, subcutaneous injection.
 6. nasopharyngeal swab
 7. peak flow measurement
15. The students are responsible for completing the introductory modules of the Communication
 16. Skills course prior to the start of the 3rd year core rotations. In addition, the modules required for the pediatric rotation are:
 1. #21 Communication and Relationships with Children and Parents.
 2. #22 The Adolescent Interview.
 17. The student will complete the web-based assignments (see below) listed in Sakai.
 18. The final written examination will be the National Board of Medical Examiners(NBME) Clinical Subject Examination, given at designated sites.
 19. The Department of Pediatrics places special emphasis on professional behavior, as well as knowledge, interviewing skills, clinical problem solving and the ability to communicate information.
 20. The final grade is compiled from information gathered from preceptors, residents and staff Members who have evaluated the student's professional behavior, knowledge, ability to communicate and clinical skills. The grade on the final written examination constitutes 30% of the final grade.

There are 5 components of the grade:

- Clinical Reasoning
- Clinical Skills
- Professional Behavior
- Communication Skills
- Written Examination – The student need to score one standard deviation above the mean on the written examination to qualify for an A+ grade on the written examination.

When there is variation in the grades on the separate components, the final grade may be qualified with a + or a –.

An Honors grade (A+) will require an A in every component.

WEB BASED EDUCATIONAL ASSIGNMENTS FOR INDEPENDENT LEARNING

The school requires the successful completion of web-based assignments in order to receive credit for this clerkship. The following web based courses are required:

- Firecracker
- Uworld
- I-Human
- Communication Modules
- Ethics Modules

The Office of the Dean monitors student performance on these assignments. The completion of these assignments will be sent to the Clerkship Directors for incorporation into the final clerkship grade. The clinical faculty feels these assignments are excellent preparation for the NBME clinical subject exams as well as Step 2. In addition, a student's diligence in completing these assignments reflects a commitment to excellence, a component of professional behavior grade.

EDUCATIONAL OBJECTIVES

Medical Knowledge

- Gain knowledge in the core topics of the curriculum.
- Gain supplementary information and data from journals, texts, research, the internet and other resources.
- Demonstrate knowledge regarding the major illnesses and conditions that affect newborns.
- Demonstrate knowledge of health maintenance and preventive pediatrics, including: immunization schedules, newborn screening, lead testing, TB testing, vision and hearing screening.
- Demonstrate knowledge of growth and development with special emphasis on puberty. (Tanner Stages)
- Compare and contrast the feeding and nutritional requirements of each age and stage of childhood.
- Demonstrate knowledge of fluid and electrolyte balance.
- Learn the principles of bioethics and understand how they apply to clinical practice.

Clinical Skills

- Demonstrate the ability to approach the patient and family in an empathic and focused manner to form a positive and informative relationship.
- Demonstrate the ability to perform an accurate and organized diagnostic interview and record the information precisely and concisely.
- Perform both comprehensive and focused histories and physical examinations on newborns, infants, toddlers, children and adolescents.
- Participate in the selection of relevant laboratory and radiological tests.
- Interpret results to support or rule out diagnoses and arrive at a working diagnosis.
- Actively participate in formulating a management plan and participate in carrying out that patient care plan.
- Communicate orally and/or in writing the information necessary to inform and educate all persons involved in the care of the patient: the patient, family/guardians, nurses and all members of the multidisciplinary health care team. Communication should avoid jargon and vagueness.
- Participate in making decisions regarding management, discharge and follow-up plans.
- Interpret laboratory values according to age-related norms.
- Accompany and observe senior staff in the delivery room for high risk births.
- Communicate with families regarding education and anticipatory guidance during outpatient visits.
- Evaluate common infections and acute illness of children of all ages in the urgent care or emergency setting.
- Evaluate children with serious illness in the inpatient setting.
- Evaluate children with chronic and rare illnesses in the outpatient and sub-specialty centers.
- Prepare management plans that consider the patient's identity, culture and ability to adhere to the recommendations.

- Demonstrate your ability to research topics and apply clinical research to your understanding of patient issues.
- Participate in clinical research when possible, either by participating in an ongoing project or initiating a new line of inquiry.
- Learn to self-assess your own unique learning needs.
- Learn how to devise and enact a plan to strengthen your deficiencies relevant to learning gaps.
- Learn to assess the credibility of information sources.

Professional Behavior

- Establish rapport with patients and families that demonstrates respect and compassion.
- Appreciate and acknowledge their identity and culture.
- Demonstrate honesty, integrity and respect in dealing with patients, families and colleagues.
- Adhere to the principals of confidentiality, privacy and informed consent.
- Demonstrate that you are a responsible team member and carry out all of your assigned duties in a timely manner.
- Offer assistance when and where it is needed.
- Demonstrate that you are an effective member of the team by fully participating in discussions and contributing to learning endeavors.
- Demonstrate sensitivity to issues related to culture, race, age, gender, religion, sexual orientation and disabilities.
- React appropriately to conflicts and ethical dilemmas by working toward solutions.
- Demonstrate a commitment to professionalism and adherence to the principals of Bioethics.
- Demonstrate responsibility in completing assignments.
- Share insights and information with your peers.
- Learn to recognize your personal biases and how they lead to diagnostic error.
- Learn to recognize when there is a need for consultation.
- Prepare for and commit to life-long learning.

CORE TOPICS

General

1. Pediatric history
2. Pediatric physical exam
3. Patient write-up (problem oriented approach)
4. Begin to formulate a differential diagnosis that relates to the presenting complaint, symptoms and findings on history and physical examination.
5. Formulate a plan for further evaluation (i.e., laboratory, radiology), treatment and management.

Well Child Care

- Immunizations
- Routine screening tests
- Anticipatory guidance
- Nutrition

Growth and Development

- Developmental milestones (when and how to evaluate)
- Failure to thrive
- Short stature
- Obesity

Neonatology

- The normal newborn
- Neonatal problems (jaundice, respiratory distress, sepsis, feeding issues)
- Newborn screening
- APGAR scoring/Ballard scoring.
- Fetal Alcohol Syndrome
- Sudden Infant Death Syndrome

Common Childhood Illnesses and Their Treatments

1. Ear Nose and Throat (ENT) and pulmonary disorders

1. Upper Respiratory Infection (URI)
2. Asthma
3. Pharyngitis
4. Foreign body
5. Otitis media
6. Pneumonia
7. Sinusitis
8. Cystic fibrosis
9. Cervical adenitis
10. Tuberculosis
11. Croup/epiglottitis
12. Fever without focus
13. Bronchiolitis

2. Eyes

1. Conjunctivitis
2. Ocular trauma
3. Amblyopia
4. Strabismus

3. Cardiac

1. Fetal circulation.
2. Congenital anomalies: Ventricular Septal Defect (VSD), Atrial Septal Defect (ASD), Tetralogy of Fallot, transposition of the great vessels, coarctation of the aorta, patent ductus arteriosus (PDA), Pulmonic stenosis (PS). The significance of these defects as isolated findings and as they relate to genetic syndromes.
3. Acquired heart disease: Rheumatic Fever (RF), myocarditis
4. Hypertension

4. Gastrointestinal Disorders (G.I.)

1. Gastroenteritis
2. Constipation/Hirschsprung's disease
3. Acute abdomen (appendicitis, intussusception, volvulus)
4. Inflammatory bowel disease
5. Gastroesophageal reflux disease (GERD)

5. Endocrine

1. Diabetes, Diabetic Ketoacidosis (DKA)
2. Thyroid disease
3. Adrenal disease
4. Congenital Adrenal Hyperplasia (CAH)
5. Failure to Thrive
6. Obesity
7. Metabolic Syndrome

6. Neurology

1. Seizures
2. Meningitis
3. Head trauma
4. Cerebral palsy
5. Tumors

7. Hematology/Oncology

1. Anemias/hemoglobinopathies
2. Pediatric malignancies (Acute Lymphatic Leukemia, lymphomas, neuroblastoma, Wilm's tumor)
3. Immune thrombocytopenic purpura (ITP)

8. Renal and Genitourinary (G.U.)

1. Urinary tract infections (UTI's)

2. Nephritis/nephrosis
3. Fluid and electrolyte balance
4. Congenital anomalies

9. Dermatology

1. Seborrheic dermatitis
2. Atopic dermatitis
3. Impetigo
4. Fungal Infections
5. Exanthems
6. Neurocutaneous stigmata (neurofibromatosis, etc.)

10. Ingestions and Toxicoses

1. Lead poisoning
2. Salicylate, acetaminophen
3. Iron

11. Common Pediatric Orthopedic Problems

1. Developmental dysplasia of the hip
2. Osgood Schlatter
3. Slipped Capital Femoral Epiphysis
4. Torsions
5. Legg-Calve-Perthes disease
6. Dislocated radial head,(Nursemaid's elbow)
7. Fractures

12. Musculoskeletal System

1. Osteomyelitis/septic arthritis
2. Muscular dystrophies

13. Adolescence

1. Tanner staging
2. Precocious/delayed puberty
3. Stages of adolescent development
4. Sexually transmitted infections
5. Pregnancy/menstrual irregularities
6. Vaginal discharge

14. Child Maltreatment Syndrome

1. Physical abuse
2. Sexual abuse
3. Emotional abuse
4. Neglect

15. Genetics

1. Down Syndrome, # 21 trisomy
2. #13 trisomy
3. #18 trisomy
4. Turner Syndrome
5. Klinefelter Syndrome

16. Collagen Vascular

1. Juvenile Rheumatoid Arthritis
2. Systemic Lupus Erythematosus
3. Henoch Schonlein purpura
4. Kawasaki disease
5. Hemolytic Uremic Syndrome

17. Behavioral Issues

1. Temper tantrums
2. Discipline issues
3. Sleep disorders
4. Attention Deficit Disorders
5. Hyperactivity issues
6. Learning disabilities
7. Oppositional defiant disorders

18. Immunology

1. Human Immunodeficiency Virus infection (HIV)
2. Congenital Immunodeficiency Syndromes

19. Ethical Principles

1. Respect for persons (privacy, confidentiality, informed consent, inclusion of patient/parent)
2. In decision making, provision for identity and culture, disclosure)
3. Medical beneficence (concern for the patient's best interest)
4. Non-maleficence (not harming)
5. Utility (balancing potential benefit to potential harm)
6. Justice (being fair)

READING

Suggested Approach to Reading for Medical Student Pediatric Rotations

“**Reading**” is an essential part of medical education. How to best benefit from the time spent reading for Pediatrics may vary among individuals. More important, than the reading per se is the **retention** of what you have read and the ability to recall and return to the source of the material – to create a “library” of important material in your notes in your files, and in your memory.

The following suggested reading materials (comprehensive textbooks, condensed textbook, specialized topical books, reference books, synopses, journals, internet sites) may be

available at your Pediatric site and should constitute sufficient resources for your basic and applied Pediatric reading.

As you start your rotations, important preliminary reading should be done in the earlier chapters devoted to Growth and Development in one of the comprehensive textbooks. One must formulate a sense of the normal parameters of each stage of development so as to appreciate how illness affects children differently during different stages of the pediatric years.

These textbooks, journals, as well as internet sites, provide in-depth descriptions of all new aspects of pediatric care.

Students should use the most recent edition of the following:

Required

- Pediatrics for Medical Students – Most recent edition, edited by Daniel Bernstein and Steven P. Shelov, Lippincott Williams and Wilkins

Comprehensive Textbooks

- Nelson’s Textbook of Pediatrics, Latest Edition, Saunders publisher, edited by Behrman, Kliegman, Jenson
- Rudolph’s Textbook of Pediatrics, Latest Edition, McGraw-Hill publisher, edited by Rudolph, Rudolph, Hostetter, Lister, Siegel
- Illustrated Textbook of Pediatrics by Tom Lissauer and Graham Clayden
- Pediatrics and Child Health by Rudolf and Levene published by Blackwell

Condensed Textbooks

- Pediatrics: A Primary Care Approach, 1st Edition, Saunders publisher, Editor C. Berkowitz
- Manual of Pediatric Practice, Saunders publisher, Editor L. Finberg
- Growth and Development, Watson and Lowrey
- Essential Pediatrics, Hull and Johnstone

Useful Subspecialty Books

- Textbook of Pediatric Emergency Medicine, Lippincott, WW publisher, edited by Fleisher, Ludwig, Henretig, Ruddy, Silverman
- Clinical Pediatric Dermatology, Elsevier publisher, edited by Paller & Mancini

- Atlas of Pediatric Physical Diagnosis, Mosby publisher, edited by Zitelli and Davis
- The Requisites in Pediatrics, Mosby publisher, series of small topical subspecialty volumes edited by L Bell, including Nephrology, Urology, Pulmonary, Endocrinology, and Cardiology
- Red Book, (Infectious Diseases) American Academy of Pediatrics, Edited by Pickering et al

Abbreviated Reference Books

- Harriet Lane Handbook, Mosby publisher, edited by senior pediatric residents at The Johns Hopkins Hospital
- Pediatric Secrets, Hanley & Bellis publisher, edited by Polin and Ditmar
- The 5-Minute Pediatric Consult Series, CHOP, edited by M. William Schwartz

Resource Materials pertaining to Cultural Competency

- Bigby J. Cross Cultural Medicine. New York: American College of Physicians, 2003 p. 1-28
- Miller S.Z. Humanism and Medicine Acad Med Vol 74, N07/July 1999 p. 800-803
- Coulehan JL. Block MR. The Medical Interview; Mastering Skills for Clinical Practice. 4th edition Philadelphia, Davis, 2001. Chapter 12 Cultural Competence in the Interview p. 228-245
- The Spirit Catches you and You Fall Down; A Hmong Child, Her American Doctors, and the Collision of Two Cultures. By Anne Fadiman. Farrar, Straus

Journals

- Pediatrics
- Journal of Pediatrics
- Academic Pediatrics
- Pediatrics in Review
- Pediatric Clinics
- Journal of Pediatric Infectious Disease

Internet Sites

- www.comsep.org - Provides curriculum and lists topics in pediatrics. This site is primarily for faculty members, but has relevant sections for students. Includes excellent video demonstrating how to perform a physical examination on a child.

- www.aap.org - Offers access to all American Academy of Pediatrics Policies and Guidelines
- www.brightfutures.aap.org - Offers information about developmental milestones, anticipatory guidance, and mental health
- www.geneclinics.org - Sponsors a database for genetic diseases and newborn screening methodologies

Required Clinical Encounters and the Patient Encounter Log

The below list of complaints and diagnoses must be entered into your Patient Encounter Log (PEL) Program during each Core and Family Medicine Clerkship.

Link: PEL <https://myapps.sgu.edu/PEL/Admin/Account/Login?ReturnUrl=%2fPEL>

The faculty in each specialty have identified specific clinical experiences that are a requirement for the clerkship. The PEL program is designed to track each student's patient encounters, clinical setting in which the encounter occurs, and level of responsibility. This program allows the school to standardize the curriculum. All patient's complaints and/or diagnosis encountered during clinical rotations must be entered into the (PEL) program. Entering the required clinical encounters "Must See List" is required during clinical rotations and will be displayed to the clerkship director for review on the final clerkship evaluation. Whenever possible incorporate the Communication Skill course topic for each required encounter. Never place patients' names or any patient identifying information in this program, this would be a HIPPA violation.

If students are unable to see a required clinical encounter, they must view the virtual visit link and watch the video. Once the encounter video is viewed, add the virtual encounter in the PEL as a Virtual visit.

Pediatrics

Psychiatry

Mission and Goals

Mission: Our mission is to provide students a clinical experience that will prepare them to understand, evaluate and treat mental disorders in a context defined by knowledge, empathy and

professionalism. The clerkship builds on a foundation of medical knowledge, adding clinical and communication skills to enable the student to understand behavioral problems using a biopsychosocial–cultural model, to formulate a well-supported differential diagnosis and to construct an effective treatment plan.

Goals: After completion of the six-week clerkship, students will:

- Demonstrate sufficient medical knowledge, clinical skill, clinical reasoning, communication skill and professional behavior required to participate in providing care for people with mental disorders in a multidisciplinary and diverse setting.
- Appreciate the multi-factorial aspects of health and illness in general, and the relationship between biological/medical, psychological, social and cultural aspects of health and illness that will enhance proficiency in clinical situations with all patients.
- Have the opportunity to decide if a career in psychiatry is right for them and receive guidance on succeeding in residency training and in professional development.

Educational Objectives: By the end of the clerkship, students will:

MEDICAL KNOWLEDGE:

1. **Psychopathology:** Demonstrate knowledge of the established and evolving neurobiology, epidemiology, clinical presentation, diagnostic criteria, differential diagnosis, treatment, course and prognosis of the major classes of psychiatric disorders, including substance use disorders.
2. **Psychopharmacology:** Demonstrate knowledge of the major indications, benefits, side effects and risks of commonly prescribed psychotropic medications and the principles of safe prescribing and monitoring through appropriate laboratory tests.
3. **Psychotherapy & psychosocial interventions:** Demonstrate basic knowledge of concepts of psychotherapy, including supportive, psychodynamic and cognitive-behavioral, and other psychosocial interventions, sufficient to explain to a patient and make a referral when indicated.

4. **Referral and consultation:** Demonstrate knowledge of when to refer to another medical specialty and how to utilize the input of the consultant.
5. **Mental health system:** Demonstrate knowledge of the structure of the mental health system and the influence of gender, race, immigration and socioeconomic status on diagnosis, access to health care and disparities in health care delivery.
6. **Law & ethics:** Demonstrate knowledge of legal and ethical issues relevant to psychiatry such as respect for patient autonomy, privacy and confidentiality, maintaining professional boundaries, evaluating decisional capacity and obtaining informed consent.

CLINICAL SKILLS, CLINICAL REASONING & COMMUNICATION SKILLS:

1. **Psychiatric evaluation:** Conduct a psychiatric evaluation in an empathic manner that facilitates formation of a therapeutic alliance with patients of diverse backgrounds, information gathering and documentation of adequate history, mental status examination, and appropriate physical exam.
2. **Risk assessment:** Perform safety/risk assessment and identify risk factors for suicidality, aggression, dangerousness, intoxication and withdrawal syndromes.
3. **Formulation, diagnosis and differential diagnosis:** Formulate and document accurate diagnosis and differential diagnoses utilizing basic knowledge, the biopsychosocial-cultural approach and the current diagnostic system.
4. **Patient centered and evidence-based care:** Develop appropriate diagnostic and treatment plans based on patient information and preferences, clinical judgment and appraisal of up-to-date scientific evidence from the medical literature.
5. **Patient/family education and follow-up:** Demonstrate ability to counsel and educate patients and their families to empower them to participate in their care and enable shared decision making, to monitor and document clinical progress, and to alter diagnostic formulation and management in response to changes.
6. **Communication & collaboration:** Demonstrate interpersonal and communication skills, both written and oral,

that result in the effective exchange of information and collaboration with patients, their families, and the health care team.

PROFESSIONAL BEHAVIOR:

1. **Compassion, integrity and respect:** Demonstrate compassion, integrity and respect towards patients, their families and staff that lead to rapport and therapeutic alliance.
2. **Cultural sensitivity:** Demonstrate sensitivity, honesty and responsiveness to the needs of a diverse patient population, including but not limited to sex, gender, age, culture, race, ethnicity, religion, disabilities, sexual orientation, immigration status, and socioeconomic status.
3. **Advocacy:** Demonstrate awareness of need to advocate for patients to reduce stigma associated with mental illness.
4. **Ethical behavior:** Demonstrate behavior consistent with ethical principles in the care of psychiatric patients including observance of professional boundaries and respect for patient privacy, autonomy and confidentiality.
5. **Self-awareness:** Demonstrate awareness of personal limits and biases, including their effect on patient-staff interaction and patient care, the need to seek consultation and supervision and the need to incorporate these into future practice.
6. **Lifelong learning, personal and professional growth:** Demonstrate a commitment to lifelong learning, personal and professional growth.

The above objectives are met by engaging in a combination of didactic study and supervised clinical experience.

Didactic study:

- Classroom activities such as lectures, seminars, and student presentations
- Self-directed learning activities such as Drexel Communication Skills Curriculum (doc.com), Firecracker and UWorld

Clinical experience:

- Assignment to one or more interdisciplinary clinical teams in a variety of clinical settings
- Performing psychiatric evaluations and follow-up, including conducting a psychiatric interview and mental status examination, constructing a differential

diagnosis according to the current diagnostic system, and formulating an effective treatment plan by participating in clinical activities with members of the team under the direction of preceptors.

Requirements: Students are expected to:

- Attend all assigned clinical and educational activities in their clinical area and in the department and observe work hours (Note: absences and leaving early can decrease professionalism grade).
- Be on call as assigned.
- Complete at least one comprehensive case write-up and two focused write-ups (SOAP Note) and submit them in a timely manner
- Complete assigned activities from the department's web-based curriculum (Firecracker, UWorld)
- Complete other assignments given by the preceptor, e.g. class presentations, making-up for absences or deficiencies.
- Complete modules 13 (managing strong emotions) and 15 (culture in the clinical interview) from the Drexel Communication Skills Curriculum (doc.com).
- Keep the patient electronic log current and bring a copy to the mid-core evaluation and submit a copy for the final evaluation.
- Do well on the final written exam (NBME subject exam).

Recommended Textbooks:

- **Introductory Textbook of Psychiatry**, Black and Andreasen, APP (currently in 6th edition)
- **Study Guide to Introductory Psychiatry**, Black & Cates, APP
- **Synopsis of Psychiatry**, Kaplan & Sadock, Wolters Kluwer (currently in 11th edition)
- **Shorter Oxford Textbook of Psychiatry**, Harrison & Cowen, Oxford University Press (currently in 7th edition)
- **New Oxford Textbook of Psychiatry**, Gelder, et al, Oxford University Press (currently in second edition)
- **Psychiatry**, Cutler & Marcus, Oxford University Press (currently in second edition)

Students are also encouraged to seek additional case-based reading, including journals such as the American Journal of Psychiatry, the British Journal of Psychiatry, as well as web-based resources and recommendations from preceptors (Up-to-Date, Medscape, etc.).

Study Guide: Please follow the Firecracker study topics calendar as a guide for the student in addition to other web-based curriculum.

Required Clinical Encounters and the Patient Encounter Log

The below list of complaints and diagnoses must be entered into your Patient Encounter Log (PEL) Program during each Core and Family Medicine Clerkship.

Link: PEL <https://myapps.sgu.edu/PEL/Admin/Account/Login?ReturnUrl=%2fPEL>

The faculty in each specialty have identified specific clinical experiences that are a requirement for the clerkship. The PEL program is designed to track each student's patient encounters, clinical setting in which the encounter occurs, and level of responsibility. This program allows the school to standardize the curriculum. All patient's complaints and/or diagnosis encountered during clinical rotations must be entered into the (PEL) program. Entering the required clinical encounters "Must See List" is required during clinical rotations and will be displayed to the clerkship director for review on the final clerkship evaluation. Whenever possible incorporate the Communication Skill course topic for each required encounter. Never place patients' names or any patient identifying information in this program, this would be a HIPPA violation.

If students are unable to see a required clinical encounter, they must view the virtual visit link and watch the video. Once the encounter video is viewed, add the virtual encounter in the PEL as a Virtual visit.

SGUSOM Dept of Psychiatry "SOAP" Note Scoring Rubric (Use of Grading AND Feedback to Student)

Surgery Core Clerkship

Mission Statement:

To provide a Surgical Curriculum that applies consistently to all clerkship sites in order to include comparable educational experiences and equivalent methods of assessment across all instructional sites and to support a learning environment that fosters professional competence within a culture that prepares students for international medical practice.

To emphasize, review and integrate the student's knowledge of basic scientific information with clinical material to result in favorable educational outcomes in the acquisition of knowledge regarding the etiology, pathophysiology, diagnosis, treatment, and prevention of surgical diseases.

To emphasize to the students the integration of the basic sciences in the development of current clinical knowledge in conjunction with ongoing changes in surgical treatment and technology.

To provide students with the tools for life-long adult learning of surgical diseases for their ongoing professional development.

COURSE GOALS and OBJECTIVES

1. MEDICAL KNOWLEDGE

- To apply and reinforce knowledge of the basic sciences, especially anatomy and physiology
- To the understanding, presentation and treatment of diseases that are commonly addressed within the field of surgery.
- To identify how and when evidence-based information and other aspects of practice-based learning and improvement affect the care of the surgical patient and the alternatives in management.
- To develop an understanding of the cost to benefit ratio, the role of payment and financing in the healthcare system, the role of multi-disciplinary care including ancillary services such as home-care and rehabilitation and other aspects of systems-based practice in the implementation of the available technologies used in surgical treatment.
- To develop an understanding of the Core Topics (modules listed below) and to apply the associated surgical knowledge to clinical analysis and problem solving.
- To utilize distributive learning through the use of on-line resources for surgical learning and problem- solving.

2. CLINICAL SKILLS

- To apply the principles of surgical practice, including operative and non-operative management to common conditions.
- To develop and apply the tools of clinical problem solving for surgical conditions including the process of data collection (history, physical examination and laboratory and imaging studies) in establishing a list of differential diagnoses and a primary working diagnosis for treatment and further investigation.
- To develop interpersonal and communication skills, in conjunction with the broad-range of clinical skill acquisition, by accessing and completing modules 17 (Informed Decision-making) and 35 (Discussing Medical Error) of the Drexel University communications course @ doc.com.
- To identify the importance of and approach to informed consent for surgical

operations and procedures, with emphasis on the risks, benefits, and alternatives.

- To identify the importance of interpersonal and communication skills and to apply those skills in the multidisciplinary care of the surgical patient in an environment of mutual respect.
- To demonstrate the ability to conduct proper sterile preparation and technique.

3. PROFESSIONAL BEHAVIOR

- To function as a part of the surgical care team in the inpatient and outpatient setting.
- To demonstrate proper behavior in the procedural setting, including the operating room, at all times.
- To understand the limits of ones position within the surgical care team in order to appropriately engage each patient, their friends and associates and their family.
- To appropriately seek supervision as provided through the hierarchical structure of the surgical care team.
- To identify and respond sensitively to cultural issues that affect surgical decision-making and treatment
- To develop an understanding of and approach to the principles of professionalism as they apply to surgery through the observation of the role-modeling provided by the surgical faculty.

CLERKSHIP GUIDELINES

1. Length: 12 weeks.

- General Surgery for 8 weeks, with a range of 50 to 80 hours per week, including 15 hours of dedicated education time. During these weeks student on-call experience is recommended. The specific on-call model will be at the discretion of the Clerkship Director, recognizing the balance between valuable clinical learning opportunities and students' need for independent study time.
- Sub-specialties associated with surgery for 4 weeks with no more than 40 hours per week including 12 hours of dedicated education time. During these weeks no on-call experience can be required. The sub-specialty experience should be for 1 to 2 weeks for each component and may include Anesthesiology, Bariatric Surgery, Cardiothoracic Surgery, Emergency Medicine, Neurosurgery, Ophthalmology, Oral and Maxillofacial Surgery, Orthopedic Surgery, Otolaryngology, Pediatric Surgery, Plastic Surgery, Podiatry, Surgical Critical Care, Transplant Surgery, Trauma Surgery, Urology and Wound Care as well as other procedure oriented sub-specialties. The selection and time distribution of the associated sub-specialty experience will be at the discretion of the Clerkship Director.

2. A specific formal orientation session, at the start of the clerkship must be provided.

The orientation must include the behavioral expectations for each student, including a discussion of professional behavior and interpersonal and communication skills as well as an overview of the departmental organization and the facilities of the site.

Student schedules must be provided as well as assignments to residency teams and preceptors. The Clinical Training Manual must be provided as a reference within the orientation process indicating the location on the SGU website. A review of the Goals and Objectives, Clerkship Guidelines and evaluation process should be conducted.

3. Inpatient, outpatient and acute care experience should be provided.

4. Attending rounds for house staff and students should be conducted at least three times a week.

5. The clerkship must include a schedule of teaching conferences, both in conjunction with and in parallel to the educational opportunities of the residents/registrar, including grand rounds, subspecialty conferences and didactic sessions that address the Core topics of the Clinical Training Manual. Students should be encouraged to study at least 3 hours every evening and at least 8 hours on weekend days off.

Protected Study Time

1. There should be direct preceptor supervision of the students at least three hours per week with case presentations by the students and bedside rounds, including physical examination and interactive sessions. The Standard Departmental Examination format and cases that are distributed at each clinical meeting may be used for teaching as well as for formative and summative feedback, particularly in the assessment of clinical reasoning, problem solving and communications skills.
2. A minimum of five clinical write-ups or formal presentations are required. The "Patient Encounter Template" that is distributed at each faculty meeting is based on the USMLE Step 2 CS examination and is recommended. The exercise should be structured to address the development of Clinical Skills through a defined problem solving approach with data gathering based on: 1) clinical history, 2) physical examination and 3) laboratory, imaging and other ancillary studies in order to develop: 4) a rank-order differential diagnosis list and concluding with 5) a primary working diagnosis to discuss with the patient and will direct treatment, prognosis and/or further investigation. Formative feedback on the exercise must be part of the process.
3. Electronic patient encounter logs are to be maintained and up to date at all times. (Instructions regarding the log are found in Section One of the Clinical Training Manual)
4. Electronic patient logs should be periodically inspected by the Clerkship Director and at mid-rotation in order to monitor the types of patients or clinical conditions that students encounter and modify them as necessary to ensure that the objectives of the education program are met. The patient logs may also be used by the Dean and the Chair of Surgery in

order to monitor the types of patients or clinical conditions that students encounter in order to determine if the objectives of the medical education program are being met.

5. Students will be responsible for the review of basic anatomy, pathology and physiology of all surgical problems encountered.
6. Department of Surgery is responsible to teach and assess competency in starting an intra-venous line and venipuncture.

Evaluations:

In addition to formative feedback given within the daily progress of the 12-week rotation, a defined formative feedback session must be provided by the Clerkship Director (or their designate) at the approximate mid-point of the clerkship.

The Standard Departmental Examination format and cases (that are distributed at each faculty meeting) may be used for teaching as well as for formative and summative feedback, particularly in the assessment of clinical reasoning, problem solving and communications skills.

The patient encounter log should be reviewed at the time of the mid-core session. The mid-core feedback session must be a one-on-one session with each student with completion of the standard form, signed by both the Clerkship Director and the student. Summative evaluation of each student will include the administration of an end-of-core written examination in the form of the National Board of Medical Examiners Subject Examination in Surgery.

In addition to formative feedback given over the course of the 12-week rotation, a defined summative feedback session must be provided by the Clerkship Director (or their designate) at the conclusion of the clerkship.

CORE TOPIC GOALS and OBJECTIVES

In addition to general medical knowledge students will be required to demonstrate knowledge in all Firecracker study topics that will form the basis for learning within the clerkship. Please see the below topic learning objectives.

Module 1: Shock

1. Define the types of shock: hypovolemic, septic, neurogenic, anaphylactic and cardiogenic.
2. Describe the clinical signs of hypovolemic shock and relate them to the underlying pathophysiological process.
3. Describe the critical objective measurements used to monitor the patient in shock.
4. Describe the initial clinical management and resuscitation of the patient in shock.

Module 2: Trauma

1. Explain the ATLS teaching of primary and secondary survey in the initial evaluation and treatment of acutely injured patients and define the classes of hemorrhage used in estimating loss of circulating blood volume.
2. Describe the initial evaluation, stabilization, resuscitation and management of the patient with blunt and penetrating abdominal and thoracic trauma.
3. Describe the initial evaluation, resuscitation and management of the patient with an isolated splenic injury.

Module 3: Head Injuries

1. Explain the Glasgow coma score.
2. Describe the principles of evaluation and treatment of head injuries including epidural and subdural hematoma.

Module 4: Burns

1. Classify burns according to the depth of injury and etiology.
2. Estimate the area of burn injury using the rule of nines.
3. Describe the resuscitation of the burn patient using the Parkland Formula.
4. Outline the basic principles of burn wound care.

Module 5: Acute Abdomen

1. Outline the pathophysiology, clinical presentation and consequences of acute peritonitis, both localized and generalized.
2. Describe the diagnosis and treatment of acute appendicitis, acute diverticulitis and acute perforated peptic ulcer.
3. Develop a detailed understanding of the diagnosis and treatment of common biliary tract-associated causes of the acute

abdomen including acute and chronic cholecystitis, cholangitis and acute pancreatitis.

4. Describe the diagnosis and treatment of commonly occurring causes of the acute abdomen in infants and children including pyloric stenosis, intussusception and midgut volvulus.

Module 6: Intestinal Obstruction

1. Differentiate large and small intestinal obstruction and list common causes of each condition.
2. Differentiate intestinal obstruction from a dynamic (also referred to as paralytic) ileus.
3. Explain the pathophysiology of fluid and electrolyte disturbances associated with small I intestinal obstruction.
4. Describe the diagnosis, initial resuscitation and management options in the treatment of intestinal obstruction, including partial small intestinal obstruction, complete small intestinal obstruction, and colonic obstruction.

Module 7: Gastrointestinal Hemorrhage

1. List the common etiologies of upper and lower gastrointestinal hemorrhage.
2. Describe of the emergency diagnosis (including clinical examination, endoscopy and radiologic imaging), resuscitation and management of acute gastrointestinal hemorrhage.
3. List the indications for surgical intervention in upper and lower gastrointestinal hemorrhage.
4. Describe the pathophysiology of portal hypertension and the principles of management.

Module 8: Common Gastrointestinal and Cutaneous Malignancies

1. Outline the steps involved in the clinical diagnosis and management of cutaneous malignancies.
2. Outline the steps involved in the clinical diagnosis and management of gastrointestinal malignancies
3. Demonstrate an understanding of the relevant anatomy that determines the strategy and extent of resection employed in the surgical management of gastrointestinal malignancies.

4. Acquire an overview of the staging and prognosis of the common malignancies noted above.

Module 9: Hernias

1. Define hernia and describe the different types of abdominal wall hernias.
2. Demonstrate an understanding of the incidence, etiology, and complications, operative risks and rate of recurrence in the management of abdominal wall hernias.
3. Outline the fundamental principles in the surgical management of inguinal, umbilical and abdominal incisional hernia.
4. Define the terms related to abdominal wall hernias: reducible, irreducible, incarcerated, obstructed and strangulated.

Module 10. Surgery of the Breast

1. Discuss the evaluation and management of common benign diseases of the breast.
2. Describe the risk factor analysis, clinical examination, diagnosis and surgical management (both breast-conserving and breast-sacrificing) of in-situ and invasive malignancy of the breast.
3. Describe the rationale for and technical approach to axillary lymph node management, including sentinel lymph node biopsy, in the surgical management of malignancy of the breast.

Module 11: Benign Colo-rectal Disorders

1. Describe the diagnosis and treatment of common benign ano-rectal conditions including hemorrhoids, fissure-in-ano, fistula-in-ano, perianal abscess and peri-rectal abscess.

Module 12: Peripheral Arterial Disease

1. Describe signs and symptoms of acute ruptured abdominal aortic aneurysm and describe the diagnosis, resuscitation and surgical management.
2. Describe the pathophysiology and diagnosis, both non-invasive and invasive, and treatment of peripheral arterial occlusive disease.
3. Describe the diagnosis and treatment of acute and chronic limb ischemia.
4. Describe the signs and symptoms of cerebral transient ischemic attacks and

- outline the available diagnostic modalities, non-invasive and invasive, used in the evaluation of carotid artery disease.
5. Describe the clinical course of mesenteric thromboembolic disease and discuss the approach to diagnosis and treatment.

Module 13: Venous Disease

1. Review the venous system of the lower extremity and develop an understanding of the effect of tissue pressure, the significance of the muscle pump and the effect of valvular insufficiency.
2. List the principles of management of varicose veins associated with venous insufficiency.
3. Explain the pathophysiology of venous stasis ulcers of the extremities and the principles of their treatment.
4. Describe the diagnosis and treatment of deep vein thrombosis (DVT), pulmonary embolism (PE) and the post-phlebotic syndrome.

Module 14: Thoracic Surgery

1. Develop an understanding of the evaluation of a solitary lung nodule seen on chest imaging.
2. List an overview of tumors commonly seen in the chest by location.
3. Delineate the principles of surgical management of lung cancer.
4. Develop an understanding of the commonly seen benign and malignant esophageal disorders including esophageal malignancy, achalasia and gastro-esophageal reflux disease (GERD).

Module 15: Transplant Surgery

1. Develop an understanding of the status of transplant surgery in the USA and worldwide.
2. Develop an understanding of the immunological aspects of transplant surgery including commonly used immunosuppressive medications and the side effects of immune-suppressive therapy.
3. Define the terms, anatomic and biologic, used in the description of transplant donors and recipients

Module 16: Laparoscopic Surgery

1. Identify the comparative benefits and risks of laparoscopic surgery in comparison to open surgical procedures.
2. Develop an understanding of advanced laparoscopic techniques and robotic surgery.

Module 17: Bariatric Surgery

1. Define obesity and morbid obesity based on the body mass index (BMI).
2. List the co-morbid conditions associated with morbid obesity.

Module 18: Endocrine Surgery

1. Describe the symptoms, signs and management of hyperthyroidism.
2. Discuss the evaluation of a thyroid nodule.
3. Discuss the differential diagnosis and treatment of the patient with hypercalcemia.
4. Discuss the pathophysiology of primary, secondary and tertiary hyperparathyroidism.
5. Discuss the diagnosis and management of pheochromocytoma.
6. Discuss the features of Multiple Endocrine Neoplasia (MEN) syndromes and their surgical treatment
7. Discuss the diagnosis and treatment of disorders of the pituitary adrenal axis.

Module 19: Ethical and Legal Issues in Surgery

- a. Describe the principles of medical ethics applied to surgery including the concepts of patient advocacy, un-masking of economic influences and the duty to relieve suffering and ease pain with dignity.
- b. Describe the fundamental elements of the patient-physician relationship.
- c. Describe the responsibilities of the patient and the physician.
- d. Discuss those aspects of medical ethics of particular concern to the surgeon:
 - 1) "Futile" care.
 - 2) Organ procurement.
 - 3) Transplantation guidelines.
 - 4) Withholding or withdrawing care.

- 5) HIV testing.
- 6) Referral of patients.
- 7) Confidentiality.
- 8) Fee splitting.
- 9) Informed consent.
- 10) Substitution of surgeon.
- 11) Disputes between medical supervisors and trainees.
- 12) New medical and surgical procedures.

Module 20: Surgery in the Elderly

Describe and explain the effect of the following factors on wound healing and recovery from illness, injury and operative treatment in elderly patients:

1. Nutrition.
2. Metabolic state (including diabetes mellitus).
3. Collagen synthesis and deposition.
4. Pharmacologic manipulation.
5. Physical activity/mobility.
6. Physiologic reserve and frailty.
7. Immune competence

Develop an understanding of the unique physiology and risk factors seen in the elderly in relation to the management of shock, trauma, head injuries, burns, the acute abdomen intestinal obstruction, common GI malignancies, hernias, surgery of the breast, venous disease, thoracic surgery, transplant surgery, laparoscopic and robotic surgery, bariatric surgery and endocrine surgery.

Module 21: Communication Skills in Surgery

Communication skills are critical to surgery in that surgical therapy is offered as an alternative to patients with whom a long term professional relationship has not been previously developed. Students will:

1. Learn to communicate effectively with patients, families, and the public, as appropriate, across a broad range of socioeconomic and cultural backgrounds particularly in regard to the concept of informed consent for surgical procedures

2. Describe the use of certified interpreters and language interpretation services in the process of informed consent for surgical procedures.
3. Describe the unique aspects of effective communication with physicians, other health professionals, and health related agencies in association with surgical treatment and follow-up surgical care.
4. Learn to work effectively as a member or leader of a health care team in surgery
5. Describe the consultative role of the surgeon to other physicians and health professionals.
6. Learn to maintain comprehensive, timely, and legible medical records associated with surgical care.

SURGICAL SUBSPECIALTIES

ANESTHESIOLOGY:

- Discuss the Pre-operative evaluation of the surgical patient in association with commonly occurring comorbid conditions.
- Discuss the intra-operative factors associated with anesthetic management including: Intubation and airway management
- Care and monitoring of the unconscious patient
- Blood and fluid management
- Local, regional and general anesthesia
- Discuss the postoperative care of the surgical patient including:
- Monitoring in the post-anesthesia care unit (PACU)
- Pain management
- Early and late complications
- Discuss the toxicity of local anesthetics agents

ORTHOPEDICS:

- Discuss the process of fracture healing.
- List common seen fractures of the long bones and pelvis.
- Outline the principles of immobilization of bones and joints in trauma.
- Delineate the diagnosis and treatment of low back pain and sciatica.

UROLOGY:

- List the common symptoms in the presentation of urinary problems.
- List the common urological problem encountered in clinical practice.

- Identify the methods used to treat ureteric and renal stones.
- Outline the diagnosis and management of benign and malignant prostate disease.

OPHTHALMOLOGY:

- Describe a normal fundoscopic examination and list the fundoscopic changes associated with common clinical conditions such as hypertension, diabetes and glaucoma.
- Describe the anatomy and pathophysiology of pupillary size and reactions in the diagnosis of neurologic abnormalities and head injury.
- Describe the symptoms and signs of glaucoma.
- Describe the management of minor eye trauma including subconjunctival hemorrhage and corneal abrasion.

OTORHINOLARYNGOLOGY:

Review the relevant clinical anatomy of ear/nose/throat.

Outline the diagnosis and management of common conditions of the ear including cerumen impaction, foreign body removal, and perforation of the tympanic membrane, Otitis external and Otitis media.

Develop an understanding of the common conditions of nose and sinuses including deviated septum, hyper-trophic turbinates, acute sinusitis and chronic sinusitis.

Develop an understanding of common surgically treated conditions of the throat including tonsillitis (and the indications for tonsillectomy) and obstructive sleep apnea (OSA).

WEB BASED EDUCATIONAL ASSIGNMENTS FOR INDEPENDENT LEARNING

The school requires the successful completion of web-based assignments in order to receive credit for this clerkship. Students should log into Sakai and complete the following:

- Firecracker
- Uworld
- I-Human
- Communication Modules
- Ethics Modules
- Geriatrics

The Office of the Dean monitors student performance on these assignments. The completion of these assignments will be sent to the Clerkship Directors for incorporation into the final clerkship grade. The clinical faculty feels these assignments are excellent preparation for the NBME clinical subject exams as well as Step 2. In addition, a student's diligence in completing these assignments reflects a commitment to excellence, a component of professional behavior grade.

Required Clinical Encounters and the Patient Encounter Log

The below list of complaints and diagnoses must be entered into your Patient Encounter Log (PEL) Program during each Core and Family Medicine Clerkship.

Link: PEL <https://myapps.sgu.edu/PEL/Admin/Account/Login?ReturnUrl=%2fPEL>

The faculty in each specialty have identified specific clinical experiences that are a requirement for the clerkship. The PEL program is designed to track each student's patient encounters, clinical setting in which the encounter occurs, and level of responsibility. This program allows the school to standardize the curriculum. All patient's complaints and/or diagnosis encountered during clinical rotations must be entered into the (PEL) program. Entering the required clinical encounters "Must See List" is required during clinical rotations and will be displayed to the clerkship director for review on the final clerkship evaluation. Whenever possible incorporate the Communication Skill course topic for each required encounter. Never place patients' names or any patient identifying information in this program, this would be a HIPPA violation.

If students are unable to see a required clinical encounter, they must view the virtual visit link and watch the video. Once the encounter video is viewed, add the virtual encounter in the PEL as a Virtual visit.

surgery

SURGERY READING LIST

REQUIRED

Print:

- Essentials of General Surgery *and* Essentials of Surgical Specialties
- Lawrence, Williams and Wilkins

RECOMMENDED

Books:

- Code of Medical Ethics Current Opinions with Annotations, AMA press.
- Early Diagnosis of the Acute Abdomen

Cope, Oxford University Press

- Essentials of Diagnosis and Treatment in Surgery

(Lange Current Essentials Series)

- The Ethics of Surgical Practice Cases, Dilemmas and Resolutions, Jones JW, McCullough LB and Richman BW, Oxford University Press.
- Lecture Notes: General Surgery

Ellis and Calne, Blackwell

- Principles of Surgery

Schwartz, McGraw Hill

- The ICU Book

Marino, Williams and Wilkins

Journals:

- Journal of the American College of Surgeons

Elsevier

- British Journal of Surgery

Wiley-Blackwell

Surgical Organizations:

Student membership in The American College of Surgeons is available through FACS.org, with the support of the Chair of Surgery, and is a well-developed source of educational material for the study of surgery.

WEB BASED EDUCATIONAL ASSIGNMENTS FOR INDEPENDENT LEARNING

The school requires the successful completion of web-based assignments in order to receive credit for this clerkship. Students should log into Sakai

to see these assignments. The Office of the Dean monitors student performance on these assignments. The completion of these assignments will be sent to the Clerkship Directors for incorporation into the final clerkship grade. The clinical faculty feels these assignments are excellent preparation for the NBME clinical subject exams as well as Step 2. In addition, a student's diligence in completing these assignments reflects a commitment to excellence, a component of professional behavior grade.

Family Medicine

The clerkship in family medicine will:

1. Introduce students to the aspects of family medicine that are applicable to all fields of medical practice including the comprehensive and continuous care provided by family physicians to patients of all ages.
2. The curriculum will enhance the students' ability to recognize the importance of family systems and the impact of chronic illness on patients and their families. The health of individual family members, cultural issues, family systems, and their cumulative effect on health outcomes will be highlighted.
3. The clerkship will emphasize the importance of integrity and medical knowledge in providing patients with the highest quality medical care.
4. The family medicine curriculum will promote the highest standards of professional behavior and clinical competence while preparing students for the practice of family medicine in diverse patient populations.
5. The curriculum will enhance student's knowledge and awareness of the impact of cultural issues and family systems.

Guidelines

The family medicine curriculum will utilize the following guidelines:

1. Length: Four to Six Weeks
2. Site: Hospital Medical Floors and Family Medicine Outpatient Facilities, residency programs, emergency rooms and family medicine community preceptor's offices.
3. Before the start of the clerkship students are required to access the corresponding

online family medicine course in Sakai. Students will be required to take the NBME exam.

4. Orientation: The first day of the clerkship the student will meet with a faculty member to discuss the expectations and responsibilities of the student during the rotation. The schedule for work hours and mandatory lectures will be reviewed.
5. Schedule: Clinical faculty will work with students precepting patient visits, attending teaching rounds, and attending didactic lectures
6. Evaluations: Each student will have a mid-rotation evaluation with feedback and an end of rotation evaluation with feedback on performance of clinical skills such as history and physical exam, communication and medical knowledge.
7. Patient Log: Students will be expected to keep an electronic log of patient encounters and be able to present these cases to Clinical Preceptors

A special emphasis will be placed on continuity of care, communication skills, and integration of medical care, preventive medicine and problem solving skills

Educational Objectives

The family medicine curriculum will assist students in achieving the following educational objectives

Medical Knowledge

1. Describe the normal psychosocial development of patients of all ages
2. Define the role of nutrition, exercise, life style and preventive medicine in promoting health and decreasing risk of disease.
3. Demonstrate an approach to screen for and detect medical conditions to reduce the incidence and prevalence of disease in diverse populations.
4. Describe the role of patient education for common topics encountered in the outpatient setting.
5. Define the physiological changes that occur in the geriatric population and demonstrate the ability to develop treatment plans based on the unique aspects of geriatric patients.
6. Define the principles of end of life care, hospice, and palliative care

Clinical Skills

1. Interpret evidence based data and demonstrate the ability to utilize the information in clinical decision making
2. Identify psychosocial issues and describe management strategies for a patient during an office visit
3. Demonstrate the ability to perform a focused history and physical
4. Demonstrate the ability to interpret information gained from the history and physical to develop a diagnosis and treatment plan
5. Describe an approach to lifelong learning and identify one's own limitations and appropriate utilization of consultation

Professional Behavior

1. Demonstrate empathy and respect irrespective of people's race, ethnicity, cultural background, social and economic status, sexual orientation or other unique personal characteristics.
2. Demonstrate self-accountability, dependability, responsibility, recognition of limitations and the need to seek help while continuing lifelong learning.
3. Demonstrate humility, compassion, integrity and honesty when dealing with patients, colleagues and the healthcare team.
4. Promote self-care and wellness for ourselves, our patients and colleagues.
5. The ability to identify and understand the principles of ethics including: i. autonomy ii. responsibilities iii. beneficence iv. nonmaleficence v. equality.

Preventative Family Medicine (FM) Assignment

Two preventative visit assignments are required for all third and fourth year students during their first Family Medicine rotation. This requirement will strengthen our health maintenance curriculum and augment students' understanding of preventive health.

The two preventative visits can occur during any outpatient or inpatient encounter. The first preventative visit should occur before a student's midcore evaluation. The second must occur before the end of the rotation. A student will conduct a focused history and physical exam and review pertinent laboratory studies. Based on this information gathering, the student will develop a preventative assessment and plan using the information technology software app.

A presentation of the encounter to the preceptor for instruction and feedback is required. Both preventative encounters must be documented in the Patient Encounter Log within comments.

Please see the full assignment description in Sakai under the Family Medicine syllabus.

Core Topics:

Students are responsible for knowing the presenting signs and symptoms and management of the firecracker study topics and the below list.

Medical Conditions

1. Abdominal pain
2. Allergic rhinitis
3. Altered mental status
4. Asthma
5. Anxiety
6. Back pain
7. Chest pain
8. Depression
9. Dermatitis (including acne)
10. Diabetes mellitus
11. Ear infection
12. Headache
13. Hypertension
14. Osteoarthritis
15. Respiratory tract infection (including bronchitis, sinusitis, pharyngitis)
16. Somatoform disorder
17. Urinary tract infection
18. Vaginitis
19. Well adult exam
20. Well child exam

In addition, students completing this clerkship should be able to provide patient education in the areas listed below.

Patient Education Topics

1. Adult health maintenance
2. Hypertension, patient control
3. Asthma management
4. Nutrition guidelines, including
5. Diabetes mellitus, new & cholesterol and weight loss controlled diagnosis
6. Safe sex and contraceptive choices
7. Depression
8. Smoking cessation
9. Exercise
10. Stress management

WEB BASED EDUCATIONAL ASSIGNMENTS FOR INDEPENDENT LEARNING

The school requires the successful completion of web-based assignments in order to receive credit for this clerkship. Students should log into Sakai and complete the following assignments:

- Firecracker
- Uworld
- Communication Modules
- Ethic Modules
- AAFP website Preventative articles and the US Preventative Task Force site
- Geriatrics

The Office of the Dean monitors student performance on these assignments. The completion of these assignments will be sent to the Clerkship Directors for incorporation into the final clerkship grade. The clinical faculty feels these assignments are excellent preparation for the NBME clinical subject exams as well as Step 2. In addition, a student's diligence in completing these assignments reflects a commitment to excellence, a component of professional behavior grade.

Required Clinical Encounters and the Patient Encounter Log

The below list of complaints and diagnoses must be entered into your Patient Encounter Log (PEL) Program during each Core and Family Medicine Clerkship.

Link: PEL <https://myapps.sgu.edu/PEL/Admin/Account/Login?ReturnUrl=%2fPEL>

The faculty in each specialty have identified specific clinical experiences that are a requirement for the clerkship. The PEL program is designed to track each student's patient encounters, clinical setting in which the encounter occurs, and level of responsibility. This program allows the school to standardize the curriculum. All patient's complaints and/or diagnosis encountered during clinical rotations must be entered into the (PEL) program. Entering the required clinical encounters "Must See List" is required during clinical rotations and will be displayed to the clerkship director for review on the final clerkship evaluation. Whenever possible incorporate the Communication Skill course topic for each required encounter. Never place patients' names or any patient identifying information in this program, this would be a HIPPA violation.

If students are unable to see a required clinical encounter, they must view the virtual visit link and watch the video. Once the encounter video is viewed, add the virtual encounter in the PEL as a Virtual visit.

Family Med

Section Ten: Electives and Additional Fourth Year Rotations

Electives and Additional Fourth Year Rotations

Course Objective:

Under the supervision of the attending and staff, the student will function as a member of the specialty healthcare team and participate in daily clinical management. Provide the student an

opportunity to participate in an intensive specialty clinical experience. Expose students to the commonly encountered patients as well as the complex diagnostic and management conditions in the specialty.

b. Clinical Expectations and Structure:

1. Students will be assigned to a clinical team for a period of 4 weeks.
2. Students should participate in all team activities, including rounding and conferences.
3. Students should maintain a daily census of 2 – 4 patients.
4. The clerkship Director (or preceptor) will supervise the overall educational experience, monitoring progress, providing feedback, and completing the final evaluation.

c. Learning Objectives:

Medical Knowledge

- Demonstrate the etiology, pathogenesis, structural and molecular alterations as they relate to the signs, symptoms, laboratory results imaging investigations and causes of common and important diseases within the specialty.
- Demonstrate the impact of factors including aging, psychological, cultural, environmental, genetic, nutritional, social, economic, religious and developmental on health and disease of patients as well as their impact on families and caregivers.
- Describe important pharmacological and non-pharmacological therapies available for the prevention and treatment of disease based on cellular and molecular mechanisms of action and clinical effects.

Clinical Skills

Demonstrate Communication Skills

- Demonstrate effective communication with patients and family members.
- Demonstrate effectively verbal and non-verbal clues of a patient's mental and physical health.
- Demonstrate cultural sensitivities and patient wishes when providing information.
- Demonstrate effectively communicate with physician and non-physician members of the health care team and consultants.

- Demonstrate the ability to clearly and concisely present oral and written summaries of patients to members of the health care team.

Demonstrate Coordination of Care Skills

- Demonstrate the effective prioritization of tasks for daily patient care in order to effectively utilize time.
- Demonstrate effective utilization of non-physician members of the health care team including nursing, pharmacist, social workers, clinical care coordinators, physical therapists, and other hospital personnel.
- Demonstrate appropriate indications for a consultant referral and how to appropriately utilize consultants.
- Demonstrate effective transfer care throughout a patient's hospitalization, including end of the day and end of service coverage.
- Demonstrate appropriate care and follow-up for the patient after discharge from the hospital and or clinic, coordinate care plan utilizing community resources when necessary.

Demonstrate Information Management Skills

- Demonstrate the ability to document the patient's admission information, daily progress, on-call emergencies, transfer notes, and discharge summaries accurately and in a timely manner.
- Demonstrate the ethical and legal guidelines governing patient confidentiality.
- Demonstrate effective retrieving of clinical information at the hospital including clinical, laboratory and radiologic data.
- Demonstrate how panic/critical values are communicated from the hospital laboratory to the responsible team member.
- Demonstrate the importance of precision and clarity when prescribing medications.
- Demonstrate electronic or paper reference to access evidence based medicine to solve clinical problems.
- Demonstrate continuous reevaluation and management revisions based on the progress of the patient's condition and appraisal of current scientific evidence and medical information

Demonstrate Procedures Skills

- List risks and benefits of common invasive procedures, and how to obtain informed consent.
- Demonstrate the rational, risks and benefits for the procedure in language that is understandable by the patient and/or his/her family.
- Demonstrate skill in common procedures that are performed by interns and residents.
- List potential procedure related risks for the operator and the need for universal precautions.
- Demonstrate the skill of documenting a procedure note.
- Demonstrate that samples obtained are properly prepared for laboratory processing.

Professionalism

- Demonstrate the ability to accept-criticism and react appropriately to difficult situations.
- Demonstrate the ability to work independently and within a healthcare team effectively.
- Demonstrate a sensitivity and respect for patients and healthcare team members

D. Assignments:

1. Daily rounds, case-based discussions
2. Daily reading on active cases

E. Assessment:

1. Formative feedback on communication skills
2. Formative feedback on case-based presentations
3. Formative feedback on daily patient management and treatment (including procedures)
4. Formative feedback on documentation and transition of care
5. Formative feedback on the utilization of non-physician and consultants in patient care
6. The clerkship director or preceptor will develop a summative assessment at the end of the rotation using feedback from as many members of the health care team as possible. The preceptor will grade the student on medical knowledge, clinical skills and professional attitude. A narrative description of the student's strengths and weakness is required.

Sub-Internship

GOALS AND OBJECTIVES:

The general goal of a sub-internship is to provide an educational experience for clinical clerks by offering graduated supervised responsibility for patient care in the area of a general specialty. The sub-intern will assume increasing responsibility for patient care and function as a fully integrated member of a medical team on the inpatient floors. Under attending supervision sub-interns render direct patient care and assume the responsibilities of an intern with a reduced load.

The sub-internship is designed to be a supervised educational experience that will serve to improve and build upon those cognitive and technical clinical skills already attained during the a 3rd year clerkship. The experience will hone the skills of data gathering and interpretation and further the student's knowledge of the illnesses that effect adult patients, and the basic management of these illnesses. Through the sub-internship, the student will have the proper environment in which to learn the clinical skills and behavior essential to the practice of the specialty and the delivery of the highest quality patient care.

SUB-INTERN CLINICAL COMPETENCIES:

I. Communication Skills

- Communicate effectively with patients and family members with humanism and professionalism.
- Recognize verbal and non-verbal clues of a patient's mental and physical health.
- Consider cultural sensitivities and patient wishes when providing information.
- Learn to effectively communicate with physician and non-physician members of the health care team and consultants.
- Demonstrate the ability to clearly and concisely present oral and written summaries of patients to members of the health care team.

II. Coordination of Care

- Learn to prioritize tasks for daily patient care in order to effectively utilize time.
- Learn how to contact members of the health care team, consultants, and other hospital personnel.

- Learn to identify appropriate issues for the consultant referral and how to appropriately utilize consultants.
- Effectively coordinate with physician and non-physician members of the health care team learn how to properly transfer care throughout a patient's hospitalization, including end of the day and end of service coverage.
- Be able to arrange appropriate care and follow-up for the patient after discharge from the hospital coordinate care plan utilizing community resources when necessary.

III. Information Management

- Be able to document the patient's admission information, daily progress, on-call emergencies, transfer notes, and discharge summaries and instructions accurately and in a timely manner.
- Understand the ethical and legal guidelines governing patient confidentiality.
- Learn how to access clinical information at the hospital including clinical, laboratory and radiologic data.
- Understand how panic values are communicated from the hospital laboratory to the responsible team member.
- Understand the importance of precision and clarity when prescribing medications.
- Use electronic or paper reference to access evidence based medicine to solve clinical problems.

IV. Procedures

- Understand the risks and benefits of common invasive procedures, and how to obtain informed consent.
- Effectively explain the rational, risks and benefits for the procedure in language that is understandable by the patient and/or his/her family.
- Gain experience with procedures that are commonly performed by interns and residents.
- Recognize potential procedure related risks for the operator and the need for universal precautions.
- Write a procedure note.
- Ensure that samples obtained are properly prepared for laboratory processing.

General and Sub-specialty Electives

4th year electives require a different educational approach and philosophy than 3rd year clerkship. The curriculum for the 3rd year clerkships is detailed and structured. The 4th year electives encourage self-directed learning, does not require a comprehensive reading list nor detailed objectives. We have not found it necessary to produce a different curriculum for every subspecialty elective and, therefore, a generic curriculum is presented below. 4th year electives should be 4 weeks in length.

Objective:

To provide the student with the opportunity for an intensive experience in a subspecialty.

To expose the student to the commonly encountered patients as well as the complex diagnostic and management conditions in this discipline.

To better understand the basis of consultation for and breathe of this discipline.

Learning experience:

Under the supervision of the attending staff, the student will function as member of the subspecialty health care team and attend daily rounds. As appropriate, the student will undertake the initial history and physical exam, present patients to the health care team, observe and assist in procedures and surgeries and acquire experience in requesting and interpreting appropriate imaging studies. By the end of the four week rotation the student should aim to develop both consultative skills and an understanding of management principles through self-directed learning using standard texts and electronic resources.

Emergency Medicine Elective

MISSION AND INTRODUCTION

The emergency medicine rotation provides a learning experience aimed at teaching medical students the necessary skills to take care of patients with a wide variety of undifferentiated urgent and emergent conditions. Our mission is

to enable students to develop and demonstrate the core competencies in knowledge, skills and behaviors of an effective emergency department clinician.

GUIDELINES

The emergency medicine curriculum objectives specify student skills and behaviors that are central to care of an emergency department (ED) patient and are appropriately evaluated in the context of the outcome objective for the medical program.

The Emergency Medicine objectives can be taught and evaluated in the following various settings to include clinical bedside teaching, observed structured clinical evaluation, lectures, problem-based learning groups, self-directed learning materials, and simulations.

Structure

- Length: four to six weeks
- Site: Emergency Department
- The Clerkship Director will provide an orientation at the start of the clerkship. This should include a discussion of the expectations and responsibilities of the clerk, the general department, the student schedule and assignments to residency teams and preceptors. .
- Before the start of the clerkship students are required to access the corresponding online Emergency Medicine course in Sakai. This course includes an introduction by the SGU Chair of Emergency Medicine, the curriculum and web-based assignments.
- Exposure to undifferentiated patient complaints across all age groups: pediatric, adult and elderly
- Teaching rounds for house staff and students should be done at least once daily.
- A full schedule of teaching conferences including grand rounds, residency conferences, and scheduled didactic sessions specific to the needs of the students.
- The clinical faculty must provide direct supervision of the students for physical examination, case presentations and clinical procedures.
- All clinical write-ups or formal presentations must include a focused history and physical, problem list with its assessment, and a diagnostic and therapeutic plan.

- The clinical faculty will evaluate oral presentation skills (including transitions of care) and provide an objective assessment of competency in communication.

Educational Objectives

A. Medical Knowledge - Students will demonstrate medical knowledge sufficient to:

- Identify the acutely ill patient
- Suggest the appropriate interpretation of tests and imaging data
- Develop a differential diagnosis which includes possible life or limb threatening conditions along with the most probable diagnoses
- Describe an initial approach to patients with the following ED presentation: chest pain, shortness of breath, abdominal pain, fever, trauma, shock, altered mental status, GI bleeding, headache, seizure, overdose (basic toxicology), burns, gynecologic emergencies, and orthopedic emergencies
- Actively use practice-based data to improve patient care

B. Clinical Skills - Students will demonstrate the ability to:

- Perform assessment of the undifferentiated patient
- Gather a history and perform a physical examination (EPA 1)
- Recognize a patient requiring urgent or emergent care and initiate evaluation and management (EPA 10)
- Prioritize a differential diagnosis following a clinical encounter (EPA 2)
- Recommend and interpret common diagnostic and screening tests (EPA 3)
- Perform general procedures of a physician (EPA 12)
 - Correctly perform the following procedural techniques: CPR, intravenous line & phlebotomy, ECG, Foley catheter, splint sprain/fracture, suture laceration. Enter procedures in the Patient encounter log (under procedures)
- Provide an oral presentation of a clinical encounter (EPA 6)
- Develop skills in disposition and follow-up of patients
- Demonstrate accessibility to patients, families, and colleagues

- Communicate effectively and sensitively with patients, families, and with health care teams in verbal and written presentations.
- Acquire skills in breaking bad news and end of life care
- Develop skills in giving and receiving safe patient hand-offs and transition of care (EPA 8)
- Form clinical questions and use information technology to advance patient care (EPA 7)
- Critically appraise medical literature and apply it to patient care

C. Professional Behavior - Students will be expected to:

- Demonstrate dependability and responsibility
- Demonstrate compassion, empathy and respect toward patients and families, including respect for the patient's modesty, privacy, confidentiality and cultural beliefs.
- Demonstrate an evidence-based approach to patient care based on current practice-based data.
- Demonstrate professional and ethical behavior
- Collaborate as a member of an inter-professional team (EPA 9)
- Evaluate own performance through reflective learning
- Incorporate feedback into improvement activities
- Be aware of their own limitations and seek supervision and/or consultation when appropriate.

CORE TOPICS

The educational core identifies the basic set of clinical presentations, procedures, and educational topics that would be covered or experienced during the clerkship. There may be some variability in how this educational core is taught (reflecting the resources of each clinical site). However, the principle teaching materials will be consistent across all training sites. The various educational venues used to teach these topics and procedures should ideally be complementary and may include lectures, bedside teaching, self-study materials, medical student-generated presentations, simulated encounters, direct observation, and laboratory workshops. The Department of Emergency Medicine will provide 12 "Essential Topic" PowerPoint Presentations to serve as the

foundation for a didactic lecture series. Again, these lectures are not meant to be the only didactic presentations a student will encounter or negate the importance of other educational presentations.

1. Clinical experience.

Clinical experience in the ED is the foundation of all emergency medicine clerkships. The major portion of the clerkship should involve medical students participating in the care of patients in the ED under qualified supervision. The clinical experience should provide the student with the opportunity to evaluate patients across all areas of the age and gender spectrum. Because of multiple factors, including the unpredictable nature of emergency medicine, clinical experience may be quite variable, even within a clerkship rotation. Certain presentations of ED patients that are common. All medical students should have exposure to the following during their clinical rotations based on a national curriculum.

1. Abdominal/pelvic pain
2. Altered mental status/loss of consciousness
3. Back pain
4. CVA/stroke
5. Chest pain
6. Fever/SIRS/Sepsis
7. Gastrointestinal bleeding
8. Geriatric Emergencies
9. Headache
10. Respiratory Distress
11. Shock/Resuscitation
12. Ob/Gyn Emergencies
13. Trauma/musculoskeletal/limb injuries
14. Wound care

This list is not meant to identify the only types of patients a student will encounter or negate the importance of many other patient presentations.

2. Procedures.

Certain procedures to be taught under appropriate supervision during the emergency medicine rotation are listed below. Procedures were selected based on clinical relevance, level of student training and availability within the ED.

1. Arterial blood gas and interpret pulse oximeter
2. ECG
3. Foley catheter placement
4. Interpretation of cardiac monitoring/rhythm strip

5. Nasogastric tube placement
6. Peripheral intravenous access
7. Splint application
8. Wound Care: laceration repair (simple), incision and drainage (abscess)
9. Venipuncture

The procedures listed here are derived from previous curricula, consensus opinion, and an informal evaluation of procedures currently performed on rotations. In recognition of the variation of what procedures might be available on clinical shifts, the use of labs, mannequins, direct observation, videotape presentations, and simulators is encouraged.

D. WEB BASED EDUCATIONAL ASSIGNMENTS FOR INDEPENDENT LEARNING

- **Communication Modules**
- **Ethics Modules**
- **Clerkship Directors in Emergency Medicine Course**

Clinical experience cannot provide a student with every aspect of the curriculum, nor can one guarantee what clinical presentations a student will encounter. Therefore, a core knowledge base relevant to emergency medicine topics must also be taught. The list of essential topics is based on previously published curricula, the model curriculum for emergency medicine residencies and consensus opinion. In order to maintain consistency in learning objectives, the Department of Emergency Medicine has developed a minimum standard with respect to student self-study. The web based curriculum uses on-line reading assignments, simulated patient encounters and assessments of medical knowledge in a self-directed learning environment. Students are required to complete each of the lesson modules of **Clerkship Directors in Emergency Medicine Course** in Sakai.

Module Topic	Content sections:
1 Introduction	Orientation Presentation The Approach To The Undifferentiated Patient Assigned Reading
2 Cardiac Arrest	Examination Assigned Reading
3 Chest Pain	Simulated Patient Encounter Examination
4 Pulmonary Emergencies and Respiratory Distress	Assigned Reading

Module Topic	Content sections:
	Simulated Patient Encounter Examination Assigned Reading
5 Abdominal & GU Emergencies	Simulated Patient Encounter Examination Assigned Reading
6 Neurologic Emergencies	Simulated Patient Encounter Examination Assigned Reading
7 Critical Care	Simulated Patient Encounter Examination Assigned Reading
8 Poisoning and Environmental Emergencies	Simulated Patient Encounter Examination Assigned Reading
9 Trauma	Simulated Patient Encounter Examination Assigned Reading
10 Emergency Care of the Elderly	Simulated Patient Encounter Examination

3. Testing and Evaluation

Each Lesson Module has a multiple choice test to evaluate your interpretation of the materials in the reading assignment and simulated patient encounters. A score of 100% is required to pass the module. The ethics and communication skills module is evaluated independently. Please be sure to take the Module quiz in the Sakai Communication Skills Course (completion of these modules is also required).

Appendix C: Visas for the Clinical Program

Visa Information for Clinical Training in the US, UK and Grenada

The majority of the University's clinical programs are in the US and the UK. Students who are not nationals will need visas to enter these countries for the purpose of clinical training. The Office of Clinical Education Operations will provide students, at the time their hospital placement is confirmed, with the most current supporting documentation necessary to facilitate the pertinent visa application process. Students should not apply for a visa for the purpose of clinical training without first following guidelines issued by the Office of Clinical Education Operations and securing the appropriate supporting documentation from the school.

For clinical training in the US, the appropriate classification is the B1 (Visitor for Business) Visa. As a non-US school, St. George's University is unable to issue Form I-20 A/B to support an application for an F-1 student visa. SGUSOM clinical students qualify for the B1 visa in the category of a medical student studying at a foreign medical school who seeks to enter the US temporarily in order to take a medical clerkship at a SGU affiliated hospital without remuneration. The US hospital must be affiliated with a US medical school. Students should be aware that this is a temporary visa classification that has a limit on the duration of stay (generally six months) once the student enters the country.

For entry into the US, it is always easier to obtain a visa from one's home country.

Canadian students apply for the US visitor visa at the border crossing or the airport. You do not apply at the US Consulate or Embassy in Canada for this visa. Canadian students who plan to reside in Canada while training in Michigan may want to look into the NEXUS Pass for expedited border crossings. For information go to:

http://www.cbp.gov/xp/cgov/travel/trusted_traveler/nexus_prog/nexus.xml

SGUSOM clinical students who wish to train in the UK for longer than 6 months can be

sponsored by SGISM Ltd to obtain a Tier 4 (General) visa. SGUSOM clinical students who wish to train in UK for less than 6 months will need **either** a Short Term Study Visa **or** No visa.

Further details can be found on the University website under Clinical UK Program.

There is no guarantee that a visa will be issued. Visa determinations are granted at the discretion of the individual immigration officers in the various embassies, border crossings and airports. **Incomplete or missing documentation can jeopardize a student's visa application.** Visit the Clinical Website and the UK Clinical Program portion of the University website for additional information regarding visas for clinical training in the US and UK.

RECOMMENDATIONS

International students who enroll in a USMLE preparatory course conducted in the US may qualify for sponsorship for a US student visa by the educational institution running the preparatory course. St. George's students who enter the US on a student visa need to apply for a change of visa classification while in the US to continue into their clinical training.

Do not apply for your visa or attempt to enter the US for your clinical training without the 3 required letters from the Office of Clinical Studies. These letters are issued only when placement is confirmed. The letters are:

- The permanent placement letter.
- The visa support letter from the Dean, School of Medicine
- The visa support letter from the hospital.

These letters state that the student is a bona fide student in good standing at SGUSOM and explain the program in medicine. They also state the dates and hospital information.

An immigration officer's main concern may be that medical students wish to earn a salary and thus not leave the US. It is important that students stress that they will not be earning a salary while in the US for their clinical training and that they have strong ties and/or obligations to return to their home country. In addition, students will need to provide proof of financial support for duration of stay in the US and proof of intent to return to home country upon graduation. Once you receive your visa, be sure to have your updated visa support letters from the

school and hospital with you whenever you cross the border/enter the country. Although a student may hold a valid visa, an immigration officer may not be aware that it is the appropriate visa classification when questioning the student about the purpose of the visit.

The B1 Visa may be issued for a number of years and may allow multiple entries. However, the entry permit (I-94) for the visa has a finite lifespan of usually no more than six months. It is very important that students remember to renew the visa and/or entry permit before it expires. Students in the US on an expired visa are considered officially "out of status" and can be banned from the country for up to 10 years.

US CITIZENS VISA INFORMATION FOR CLINICAL TRAINING IN CANADA

US Citizens do not require any kind of study visa to enter Canada for the purpose of clinical training provided their stay is less than 6 months. For more information:

Appendix F: Confidential Student Questionnaire

Family Questionnaire

1. How consistent was feedback on your performance? (1-very poor 2-poor 3-average 4-good 5-very good)
2. How helpful was your midcore evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)
3. How was the review of your patient logs? (1-very poor 2-poor 3-average 4-good 5-very good)
4. How was your end of the rotation communication skills and final assessment evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)
5. How well did the clerkship fulfill the goals and objectives described at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
6. How well were the clerkship goals, objectives and requirements explained to you at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
7. How well were you instructed in the performance of a patient work-up? (1-very poor 2-poor 3-average 4-good 5-very good)
8. How well were you integrated with the health care team? (1-very poor 2-poor 3-average 4-good 5-very good)
9. How were your teaching sessions for students only? (1-very poor 2-poor 3-average 4-good 5-very good)
10. How would you rate the quality of teaching? (1-very poor 2-poor 3-average 4-good 5-very good)
11. How would you rate the volume and mix of clinical cases? (1-very poor 2-poor 3-average 4-good 5-very good)
12. How would you rate your overall experience of the clerkship? (1-very poor 2-poor 3-average 4-good 5-very good)
13. I did not experience and/or witness mistreatment of students during this educational experience (e.g., harassment, discrimination, Public humiliation, psychological/physical punishment) If any mistreatment was witnessed please document in comment box. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
14. I feel supported in my personal and professional pursuits by other School of Medicine students. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
15. Please name and rate with a comment (in text box below) on the attending(s) you worked with most. If you worked with multiple Attendings please write a rating number (1-very poor 2-poor 3-average 4-good 5-very good) next to their name.
16. SGU Covid-19 education courses improved my understanding of infection and transmission. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
17. The clerkship duty hour limits (50 hours or less per week) were followed. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
18. The clinical site orientation and instruction on the use of PPE was adequate. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
19. The preventative measures at clinical sites protected students from infection. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
20. There are faculty and/or other school representatives that I feel comfortable confiding in when important concerns arise. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
21. This clerkship provides a safe and nurturing emotional climate that focuses on student success. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

22. Were you provided with mid-clerkship feedback? (****Important only use 1 for NO or 5 for YES****) 1=No 5=Yes

Medicine Questionnaire

1. How consistent was feedback on your performance? (1-very poor 2-poor 3-average 4-good 5-very good)
2. How helpful was your midcore evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)
3. How was the review of your patient logs? (1-very poor 2-poor 3-average 4-good 5-very good)
4. How was your end of the rotation communication skills and final assessment evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)
5. How well did the clerkship fulfill the goals and objectives described at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
6. How well were the clerkship goals, objectives and requirements explained to you at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
7. How well were you instructed in the performance of a patient work-up? (1-very poor 2-poor 3-average 4-good 5-very good)
8. How well were you integrated with the health care team? (1-very poor 2-poor 3-average 4-good 5-very good)
9. How were your teaching sessions for students only? (1-very poor 2-poor 3-average 4-good 5-very good)
10. How would you rate the quality of teaching? (1-very poor 2-poor 3-average 4-good 5-very good)
11. How would you rate the volume and mix of clinical cases? (1-very poor 2-poor 3-average 4-good 5-very good)
12. How would you rate your overall experience of the clerkship? (1-very poor 2-poor 3-average 4-good 5-very good)
13. I did not experience and/or witness mistreatment of students during this educational experience (e.g., harassment, discrimination, public humiliation, psychological/physical punishment) If any mistreatment was witnessed please document in comment box. (1 Strongly Disagree - 5 Strongly Agree)
14. I feel supported in my personal and professional pursuits by other School of Medicine students. (1 Strongly Disagree - 5 Strongly Agree)

15. Please name and rate with a comment (in text box below) on the attending(s) you worked with most. If you worked with multiple Attendings please write a rating number (1-very poor 2-poor 3-average 4-good 5-very good) next to their name
16. SGU Covid-19 education courses improved my understanding of infection and transmission? (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
17. The clerkship duty hour limits (50 hours or less per week) were followed. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
18. The clinical site orientation and instruction on the use of PPE was adequate. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
19. The preventative measures at clinical sites protected students from infection. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
20. There are faculty and/or other school representatives that I feel comfortable confiding in when important concerns arise. (1 Strongly Disagree - 5 Strongly Agree)
21. This clerkship provides a safe and nurturing emotional climate that focuses on student success. (1 Strongly Disagree - 5 Strongly Agree)
22. Were you provided with mid-clerkship feedback? (****Important only use 1 for NO or 5 for YES****) 1=No 5=Yes

OB/GYN Questionnaire

1. How consistent was feedback on your performance? (1-very poor 2-poor 3-average 4-good 5-very good)
2. How helpful was your mid-core evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)
3. How many deliveries did you participate in during the rotation? 5- Exceptional greater than 25 deliveries; 4-Good between 24 and 15; 3-Adequate between 14 and 10; 2-Minimal between 9 and 5; 1-Poor less than 5; Not Done 0
4. How many pelvic examinations have you performed during your rotation? 5- Exceptional greater than 25; 4-Good between 24 and 15; 3-Adequate between 14 and 10; 2-Minimal between 9 and 5; 1-Poor less than 5; Not Done 0

5. How was the review of your patient logs? (1-very poor 2-poor 3-average 4-good 5-very good)

6. How was your end of the rotation communication skills and final assessment evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)

7. How was your experience in the operating room? (1-very poor 2-poor 3-average 4-good 5-very good)

8. How well did the clerkship fulfill the goals and objectives described at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)

9. How well were the clerkship goals, objectives and requirements explained to you at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)

10. How well were you instructed in the performance of a patient work-up? (1-very poor 2-poor 3-average 4-good 5-very good)

11. How well were you integrated with the health care team? (1-very poor 2-poor 3-average 4-good 5-very good)

12. How were your teaching sessions for students only? (1-very poor 2-poor 3-average 4-good 5-very good)

13. How would you rate the quality of teaching? (1-very poor 2-poor 3-average 4-good 5-very good)

14. How would you rate the volume and mix of clinical cases? (1-very poor 2-poor 3-average 4-good 5-very good)

15. How would you rate your overall experience of the clerkship? (1-very poor 2-poor 3-average 4-good 5-very good)

16. I did not experience and/or witness mistreatment of students during this educational experience (e.g., harassment, discrimination, public humiliation, psychological/physical punishment) If any mistreatment was witnessed please document in comment box. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

17. I feel supported in my personal and professional pursuits by other School of Medicine students. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

18. If you are not specifically interested in Ob/Gyn, how valuable was your clerkship experience? (1-very poor 2-poor 3-average 4-good 5-very good)

19. Please name and rate with a comment (in text box below) on the attending(s) you worked with most. If you worked with multiple Attendings please write a rating number (1-very poor 2-poor 3-average 4-good 5-very good) next to their name.

20. SGU Covid-19 education courses improved my understanding of infection and transmission. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

21. The clerkship duty hour limits (50 hours or less per week) were followed. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

22. The clinical site orientation and instruction on the use of PPE was adequate. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

23. The preventative measures at clinical sites protected students from infection. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

24. There are faculty and/or other school representatives that I feel comfortable confiding in when important concerns arise. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

25. This clerkship provides a safe and nurturing emotional climate that focuses on student success. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

26. Were you provided with mid-clerkship feedback? (****Important only use 1 for NO or 5 for YES****) 1=No 5=Yes

Pediatric Questionnaire

1. How consistent was feedback on your performance? (1-very poor 2-poor 3-average 4-good 5-very good)

2. How helpful was your midcore evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)
3. How was the review of your patient logs? (1-very poor 2-poor 3-average 4-good 5-very good)
4. How was your end of the rotation communication skills and final assessment evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)
5. How well did the clerkship fulfill the goals and objectives described at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
6. How well were the clerkship goals, objectives and requirements explained to you at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
7. How well were you instructed in the performance of a patient work-up? (1-very poor 2-poor 3-average 4-good 5-very good)
8. How well were you integrated with the health care team? (1-very poor 2-poor 3-average 4-good 5-very good)
9. How were your teaching sessions for students only? (1-very poor 2-poor 3-average 4-good 5-very good)
10. How would you rate the quality of teaching from Attendings? (1-very poor 2-poor 3-average 4-good 5-very good)
11. How would you rate the quality of teaching from residents? (1-very poor 2-poor 3-average 4-good 5-very good)
12. How would you rate the volume and mix of clinical cases? (1-very poor 2-poor 3-average 4-good 5-very good)
13. How would you rate your overall experience of the clerkship? (1-very poor 2-poor 3-average 4-good 5-very good)
14. I did not experience and/or witness mistreatment of students during this educational experience (e.g., harassment, discrimination, humiliation, psychological/ physical punishment) If any mistreatment was witnessed please document in comment box. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

15. I feel supported in my personal and professional pursuits by other School of Medicine students. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
16. Please name and rate with a comment (in text box below) on the attending(s) you worked with most. If you worked with multiple Attendings please write a rating number (1-very poor 2-poor 3-average 4-good 5-very good) next to their name.
17. SGU Covid-19 education courses improved my understanding of infection and transmission. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
18. The clerkship duty hour limits (50 hours or less per week) were followed. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
19. The clinical site orientation and instruction on the use of PPE was adequate. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
20. The preventative measures at clinical sites protected students from infection. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
21. There are faculty and/or other school representatives that I feel comfortable confiding in when important concerns arise. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
22. This clerkship provides a safe and nurturing emotional climate that focuses on student success. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
23. Were you provided with mid-clerkship feedback? (****Important only use 1 for NO or 5 for YES****) 1=No 5=Yes

Psychiatry Questionnaire

1. How consistent was feedback on your performance? (1-very poor 2-poor 3-average 4-good 5-very good)
2. How helpful was your midcore evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)

3. How was the review of your patient logs? (1-very poor 2-poor 3-average 4-good 5-very good)
4. How was your end of the rotation communication skills and final assessment evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)
5. How well did the clerkship fulfill the goals and objectives described at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
6. How well were the clerkship goals, objectives and requirements explained to you at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
7. How well were you instructed in the performance of a patient work-up? (1-very poor 2-poor 3-average 4-good 5-very good)
8. How well were you integrated with the health care team? (1-very poor 2-poor 3-average 4-good 5-very good)
9. How were your teaching sessions for students only? (1-very poor 2-poor 3-average 4-good 5-very good)
10. How would you rate the quality of teaching? (1-very poor 2-poor 3-average 4-good 5-very good)
11. How would you rate the volume and mix of clinical cases? (1-very poor 2-poor 3-average 4-good 5-very good)
12. How would you rate your overall experience of the clerkship? (1-very poor 2-poor 3-average 4-good 5-very good)
13. I did not experience and/or witness mistreatment of students during this educational experience (e.g., harassment, discrimination, public humiliation, psychological/ physical punishment) If any mistreatment was witnessed please document in comment box. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
14. I feel supported in my personal and professional pursuits by other School of Medicine students. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
15. Please name and rate with a comment (in text box below) on the attending(s) you worked with

most. If you worked with multiple Attendings please write a rating number (1-very poor 2-poor 3-average 4-good 5-very good) next to their name.

16. SGU Covid-19 education courses improved my understanding of infection and transmission? (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
17. The clerkship duty hour limits (50 hours or less per week) were followed. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
18. The clinical site orientation and instruction on the use of PPE was adequate. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
19. The preventative measures at clinical sites protected students from infection. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
20. There are faculty and/or other school representatives that I feel comfortable confiding in when important concerns arise. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
21. This clerkship provides a safe and nurturing emotional climate that focuses on student success. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
22. Were you provided with mid-clerkship feedback? (****Important only use 1 for NO or 5 for YES****) 1=No 5=Yes

Surgery Questionnaire

1. How consistent was feedback on your performance? (1-very poor 2-poor 3-average 4-good 5-very good)
2. How helpful was your midcore evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)
3. How was the review of your patient logs? (1-very poor 2-poor 3-average 4-good 5-very good)
4. How was your end of the rotation communication skills and final assessment evaluation? (1-very poor 2-poor 3-average 4-good 5-very good)

5. How was your experience in the operating room? (1-very poor 2-poor 3-average 4-good 5-very good)
6. How was your exposure to surgical sub-specialties? (1-very poor 2-poor 3-average 4-good 5-very good)
7. How well did the clerkship fulfill the goals and objectives described at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
8. How well were the clerkship goals, objectives and requirements explained to you at orientation? (1-very poor 2-poor 3-average 4-good 5-very good)
9. How well were you instructed in the performance of a patient work-up? (1-very poor 2-poor 3-average 4-good 5-very good)
10. How well were you integrated with the health care team? (1-very poor 2-poor 3-average 4-good 5-very good)
11. How were your teaching sessions for students only? (1-very poor 2-poor 3-average 4-good 5-very good)
12. How would you rate the quality of teaching? (1-very poor 2-poor 3-average 4-good 5-very good)
13. How would you rate the volume and mix of clinical cases? (1-very poor 2-poor 3-average 4-good 5-very good)
14. How would you rate your overall experience of the clerkship? (1-very poor 2-poor 3-average 4-good 5-very good)
15. I did not experience and/or witness mistreatment of students during this educational experience (e.g., harassment, discrimination, public humiliation, psychological/ physical punishment) If any mistreatment was witnessed please document in comment box. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
16. I feel supported in my personal and professional pursuits by other School of Medicine students. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
17. Please name and rate with a comment (in text box below) on the attending(s) you worked with most. If you worked with multiple Attendings

please write a rating number (1-very poor 2-poor 3-average 4-good 5-very good) next to their name.

18. SGU Covid-19 education courses improved my understanding of infection and transmission? (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
19. The clerkship duty hour limits were followed. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)
20. The clinical site orientation and instruction on the use of PPE was adequate. (1-Strongly Disagree 2-Disagree 3-Neutral 4-Agree 5-Strongly Agree)

Appendix H: Medicine Elective

Electives that Fulfill the 4th year "Medicine Elective" Requirement

- Cardiology
- Critical Care Medicine
- Endocrinology, Diabetes and Metabolism
- Gastroenterology
- Geriatric Medicine
- Hematology
- Hematology and Oncology
- Infectious Disease
- Nephrology
- Neurology
- Oncology
- Outpatient Medicine
- Pulmonary Disease
- Pulmonary Disease and Critical Care Medicine
- Radiology
- Rheumatology

Appendix I: (Modified from the NBME website)

Communication and Interpersonal Skills Behavior List

Behavior List

Functions	Sub-Functions
1. Fostering the Relationship	Expressed interest in the patient as a person
	Treated the patient with respect
	Listened and paid attention to the patient Encouraged the patient to tell his/her story
2. Gathering Information	Explored the patient's reaction to the illness or Problem
	Provided information related to the working diagnosis
3. Providing Information	Provided information on next steps

4. Making Decisions: Basic

Elicited the patient's perspective on the diagnosis and next steps

5. Supporting Emotions: Basic

Finalized plans for the next steps
Facilitated the expression of an implied or stated emotion or something important to him/her

Appendix J: Drexel University College of Medicine Communication Curriculum

Drexel University Communication Curriculum

Communication Curriculum

Introduction Welcome to the DocCom Learning Curriculum. We believe that using this curriculum will enable your faculty to create an outstanding educational experience in some essential aspects of clinician-patient communication. When learners master the curriculum material, they will deliver higher quality patient care and more empathic care. For example, they will be more skilled in working with challenging clinical situations such as giving bad news or relating to an angry family member. This curriculum specifically assists learners striving to fulfill the ACGME competency requirements in clinician-patient communication.

BASIC MODULES

Communication Basic Modules (Modules 1 - 12)

01. Overview

Geoff Gordon MD, Oregon Health & Science University, Portland

02. Mindfulness and Reflection in Clinical Training and Practice

Ronald Epstein MD, Rochester University

Learning Objectives:

- Describe common physician characteristics that may contribute to unhealthy personal beliefs, behaviors, and habits.
- Describe common causes and manifestations of professional burnout.
- Describe healthy cognitive, emotional, and behavioral practices that can promote your well-being and sustain you throughout a career in medicine.

- Describe 3 changes in attitude, behavior or practice you could make that would improve or sustain your well-being.
- Disclose these changes and discuss their importance and potential barriers to their implementation with 2 important people in your life.
- Discuss why physician well-being results in improved relationships and outcomes.

03. Therapeutic Aspects of Medical Encounters
David Brody MD, Denver Health; Dennis Novack MD, Drexel University College of Medicine, Philadelphia

Learning Objectives:

- Describe core concepts underlying the therapeutic efficacy of the physician patient relationship
- List the therapeutic goals of medical encounters
- Describe strategies that advance the therapeutic aims of your medical encounters

04. Balance, Self-Care
John F. Christensen, PhD., Legacy Health System, Portland, Oregon

Learning Objectives:

- Describe common physician characteristics that may contribute to unhealthy personal beliefs, behaviors, and habits.
- Describe common causes and manifestations of professional burnout.
- Describe healthy cognitive, emotional, and behavioral practices that can promote your well-being and sustain you throughout a career in medicine.
- Describe 3 changes in attitude, behavior or practice you could make that would improve or sustain your well-being.
- Disclose these changes and discuss their importance and potential barriers to their implementation with 2 important people in your life.
- Discuss why physician well-being results in improved relationships and outcomes.

05. Integrated Patient-centered and Clinician-centered Interviewing - Structure and Content of the Interview
Auguste H. Fortin VI, MD, MPH, Yale University; Francesca Dwamena MD, and Robert C. Smith MD, ScM, Michigan State University

Learning Objectives:

- Describe the content, and process of a "complete" medical history,
- Describe the difference between the tasks or functions of an interview and its structure,
- Describe patient-centered and doctor-centered interview goals and skills,
- Describe the different contributions of patient-centered and doctor-centered skills to understanding the patient's full (biopsychosocial) history,
- Describe the content and structure the written medical history.

06. Build a Relationship
Julian Bird MD, Kings College, London; Steve Cole MD, SUNY, Stony Brook

Learning Objectives:

- State at least five reasons why relationship building is key to medical care

- State three key principles of relationship building
- Demonstrate five basic relationship building skills

07. Open the Discussion
Beth Lown MD, Harvard University; Ron Saizow MD, University of Oklahoma

Learning Objectives:

- Discuss the importance and rationale for eliciting all patient concerns to establish, through negotiation when necessary, the visit agenda.
- Discuss and implement communication strategies at the beginning of each medical encounter to elicit a comprehensive list of patients' concerns.
- Discuss and implement communication strategies to prioritize and reach agreement on the agenda.
- Identify personal barriers to the elicitation of concerns, and the risks of failure to do so.

08. Gather Information
Beth Lown MD, Harvard University

Learning Objectives:

- Describe[JZ1] the primary goals of relationship-centered information gathering.
- Describe and demonstrate relationship-centered strategies for gathering information.
- Describe and demonstrate strategies for encouraging patient participation in gathering information.
- Use your knowledge and skills to gather information effectively from a patient.

09. Understand the Patient's Perspective

Beth Lown MD, Harvard University

Learning Objectives:

- Endeavor to more consistently appreciate your patients' perspectives and to "see the world through their eyes."
- Understand how patients' social contexts affect their health and illness behaviors.
- Describe and demonstrate skills to elicit patients' social context, explanatory models, concerns and expectations.
- Explore personal assumptions and potential barriers to understanding patients' contexts and perspectives.

10. Share Information
Beth Lown MD, Harvard University

Learning Objectives:

- Understand the challenges that you will face when sharing information with patients
- Describe and demonstrate a systematic, relationship-centered approach to sharing information
- What skills do you need to practice to improve your relationship-centered sharing of information, and when will you do this?

11. Reach Agreement
Beth Lown MD, Harvard University

Learning Objectives:

- Describe conceptual models of decision making and reaching agreement.
- Describe evidence regarding patient participation in their decisions and care.

- Describe their own attitudes, preferences and approaches to partnering with patients in decision making.
- Describe and demonstrate skills for reaching agreement about decisions and plans.

12. Provide Closure

Beth Lown MD, Harvard University

Learning Objectives:

- Describe clinician behaviors that facilitate effective visit closure.
- Describe physician and patient behaviors that interrupt or prolong closure.
- Describe your approach to saying goodbye to patients in various clinical settings.
- Describe and demonstrate specific communication skills for providing closure.

ADVANCED ELEMENTS

13. Responding to Strong Emotions

Barry Egener MD, Legacy Health System, Portland, Oregon
With Doctoring Curriculum Facilitator Guide

14. It Goes without Saying: Nonverbal Communication in Clinician-Patient Relationships

Jeannette M. Shorey II MD, University of Arkansas Medical School

15. Understanding Difference and Diversity in the Medical Encounter: Communication across Cultures

Calvin Chou MD, PhD; University of California, San Francisco; Ellen Pearlman MD, New York University; Cathy Risdon MD, McMaster University

16. Promoting Adherence and Health Behavior Change

Carol Chou MD, University of Pennsylvania; Michael Goldstein MD, Brown University; F. Dan Duffy MD, U Oklahoma, Tulsa; Rob Shochet MD, Johns Hopkins University
With Doctoring Curriculum Facilitator Guide

17. Shared Decision-Making

Clarence H. Braddock III MD, MPH, Stanford University

18. Exploring Sexual Issues

Rich Frankel PhD, Indiana University; Elizabeth Edwardsen MD, Rochester University; Sarah Williams MD, New York University

19. Exploring Spirituality & Religious Beliefs

Shimon Waldfogel MD, Thomas Jefferson University, and Stuart R. Sprague, PhD, AnMed Health

COMMUNICATING IN SPECIFIC SITUATIONS

20. Family Interview

Kathy Cole-Kelly MD, Case Western, Tom Campbell MD, Rochester University

21. Communication and Relationships with Children and Parents

Elizabeth Rider MSW, MD, Harvard University

22. The Adolescent Interview

Ken Ginsberg MD, Oana Tomescu MD, University of Pennsylvania

23. The Geriatric Interview

Brent C. Williams MD, MPH and James T. Pacala MD, MS

24. Tobacco Intervention

by Michael Goldstein, MD, and Margaret Dundon, PhD, VHA National Center for Health Promotion and Disease Prevention as well as Susan Swartz Woods, MD, Oregon Health & Sciences University

25. Motivating Healthy Diet and Physical Activity

Geoffrey Williams MD, Rochester University

26. Anxiety and Panic Disorder

Steven Locke MD, Harvard University

27. Communicating with Depressed Patients

Steven Cole MD, SUNY, Stony Brook
With Doctoring Curriculum Facilitator Guide

28. Domestic Violence

Nielufar Varjavand MD and Dennis Novack MD, Drexel University College of Medicine
With Doctoring Curriculum Facilitator Guide

29. Alcohol: Interviewing and Advising

William Clark MD, Harvard Medical School; and Sharon Parish MD, Albert Einstein College of Medicine
With Doctoring Curriculum Facilitator Guide

30. The Clinical Assessment of Substance Use Disorders

Barbara A. Schindler MD, Drexel University College of Medicine, and Ted Parran MD, Case Western Reserve
With Doctoring Curriculum Facilitator Guide

31. Medically Unexplained Symptoms and Somatization

Francesca Dwamena MD, Michigan State University; Felice Milan MD, Albert Einstein College of Medicine; Auguste H. Fortin VI MD, MPH, Yale University, Robert C. Smith MD, ScM, Michigan State University

32. Advance Directives

Julie Childers, M.D. and Eva B. Reitschuler-Cross, M.D., University of Pittsburgh School of Medicine; Lynn O'Neill, M.D., Emory University School of Medicine

33. Giving Bad News

Timothy Quill MD, Catherine Gracey MD, Carly Dennis MD, University of Rochester; Anthony Caprio MD, Carolinas Healthcare System
With Doctoring Curriculum Facilitator Guide

34. Communication near the End of Life

Muriel Gillick MD, Harvard University
With Doctoring Curriculum Facilitator Guide

35. Dialog about Unwanted Outcomes

Peter Barnett MD, University of New Mexico

36. Ending Clinician-Patient Relationships

Peter Lichstein MD, Wake Forrest University

COMMUNICATING WITH COLLEAGUES

37. The Oral Presentation

Alicia Monroe MD, Brown University

38. High Performance Teams: Diversity and RESPECT

Cathy Risdon MD, McMaster University, Marla Rowe MD, Wayne State University, Zeev Neuwirth MD PhD, Harvard University, Anthony Suchman MD, Rochester University, Julie Crosson MD and Carol Mostow MD, Boston University School of Medicine

Description:

Understand how effective multidisciplinary teams are used for effective patient care.

Learning Objectives:

- List five stages of team development.
- List the skills of the RESPECT mnemonic
- Elicit perspectives across all levels of hierarchy, professional roles and diversity of background.
- Respond with empathy when team members express feelings and concerns.
- Affirm the value of difference and diversity to team effectiveness. Identify skills that help teams collaborate when challenged by change or conflict and when debriefing adverse events

39. Talking with Impaired Clinicians

Peter Barnett MD, University of New Mexico

40. Giving Effective Feedback: Enhancing the Ratio of Signal to Noise

Burton Landau PhD, Drexel University College of Medicine
With Doctoring Curriculum Facilitator Guide

41. Professionalism: Boundary Issues

Elizabeth Gaufberg MD, MPH, Harvard Medical School
With Doctoring Curriculum Facilitator Guide

42. Effective Clinical Teaching

Dennis Novack MD, Allison Ferris MD, Burton Landau PhD,
Drexel University College of Medicine, and Ronald Saizow MD,
University of Oklahoma
With Guidelines for Residents

Appendix K: Ethics in Medicine Curriculum

Overview

The Ethics in Medicine website is an educational resource designed for clinicians in training. The website is hosted and maintained by the Department of Bioethics & Humanities at the University of Washington School of Medicine. The topics, cases, and resources covered here are intended to be used as a resource by the UWSOM community and to supplement or support other teaching and learning throughout the curriculum. It is not designed to answer patient-specific clinical, professional, legal, or ethical questions.

NOTE: The UW Dept. of Bioethics & Humanities is in the process of updating all Ethics in Medicine articles for attentiveness to the issues of equity, diversity, and inclusion.

<https://depts.washington.edu/bhdept/ethics-medicine>

BIOETHICS TOPICS

- Advance Care Planning & Advance Directives
- Breaking Bad News
- Clinical Ethics and Law
- Complementary Medicine
- Confidentiality
- Cross-Cultural Issues and Diverse Beliefs
- Difficult Patient Encounters
- Do Not Resuscitate during Anesthesia and Urgent Procedures
- Do Not Resuscitate Orders
- End-of-Life Issues
- Ethics Committees and Consultation
- Futility
- Genetics

- HIV and AIDS
- Informed Consent
- Interdisciplinary Team Issues
- Maternal / Fetal Conflict
- Mistakes
- Neonatal ICU Issues
- Pandemics
- Parental Decision Making
- Personal Beliefs
- Physician Aid-in-Dying
- Physician-Patient Relationship
- Prenatal Diagnosis
- Professionalism
- Public Health Ethics
- Research Ethics
- Resource Allocation
- Spirituality and Medicine
- Student Issues
- Termination of Life-Sustaining Treatment
- Treatment Refusal
- Truth-telling and Withholding Information

Appendix L: Rubrics for the Assessment of Clinical Competencies

Old Rubric

Old rubric for the assessment of clinical competencies (for students who started core clerkships (year 3) prior to January 3, 2022.

Competency/ Level of Proficiency	A+	A	B	C
Clinical Skills	The student is able to independently obtain a comprehensive and/or focused medical history. Performs physical examinations of all categories appropriate to the patient's condition. Present sand or document pertinent health information in a concise, complete and responsible way. Performs routine and basic medical procedures. Selects all	Student with Minimal guidance: Is able to obtain a comprehensive and/or focused medical history. Performs physical examinations of all categories appropriate to the patient's condition. Presents and or document pertinent health information in a concise, complete and responsible way. Able to perform routine	Student with intermittent guidance: Is able to obtain a comprehensive and/or focused medical history. Performs physical examinations of most categories appropriate to the patient's condition. Presents and or document most pertinent health information in a concise, semi-complete and responsible way. Able to perform	Stu cor gui

New Rubric

New rubric for the assessment of clinical competencies (for students who started core clerkships (year 3) to January 3, 2022.

Competency/ Level of Proficiency Clinical Skills	Honors	High Pass	Pass	Fail
Practical Clinical skills	The student is able to independently obtain a comprehensive and/or focused medical history. Performs physical examinations of all categories appropriate to the patient's condition. Present sand or document pertinent health	Student with minimal guidance: Is able to obtain a comprehensive and/or focused medical history. Performs physical examinations of all categories appropriate to the patient's condition. Presents and or document	Student with continual guidance: Is able to obtain a comprehensive and/or focused medical history. Performs physical examinations of all categories appropriate to the patient's condition. Presents and or	Student unable despite maximal guidance: Is unable to obtain a comprehensive and/or focused medical history. Unable to perform appropriate physical examinations of all categories appropriate to the patient's condition. Unable

including aging, psychological, cultural, environmental, genetic, nutritional, social, economic, religious and developmental on health and disease of patients as well as their impact on families and caregivers

cultural, environmental, genetic, nutritional, social, economic, religious and developmental on health and disease of patients as well as their impact on families and caregivers

cultural, environmental, genetic, nutritional, social, economic, religious and developmental on health and disease of patients as well as their impact on families and caregivers

Professional Behavior

independently: including aging, psychological, cultural, environmental, genetic, economic, religious and developmental on health and disease of patients as well as their impact on families and caregivers

A student with minimal guidance: Fosters an atmosphere of excellence, participates and attends in all rounds, clinical sessions and lectures on time. Accepts criticism well. Has completed all logs in the patient encounter log and has completed all web based requirements. Demonstrates sensitivity to issues related to culture, race, age, gender, religion, sexual orientation and disability in the delivery of health care. Demonstrates a commitment to high professional and ethical standards. Recognizes one's own limitations in knowledge, skills and attitudes and the need for asking for additional consultation. Participates in activities to improve the quality of medical education. Reacts appropriately to difficult situations involving conflicts, nonadherence, and ethical dilemmas

A student with continuous guidance: Fosters an atmosphere of excellence, participates and attends in all rounds, clinical sessions and lectures on time. Accepts criticism well. Has completed all logs in the patient encounter log and has completed all web based requirements. Demonstrates sensitivity to issues related to culture, race, age, gender, religion, sexual orientation and disability in the delivery of health care. Demonstrates a commitment to high professional and ethical standards. Recognizes most limitations in knowledge, skills and attitudes and the need for asking for additional consultation. Participates in activities to improve the quality of medical education. Reacts appropriately to difficult situations involving conflicts, nonadherence, and ethical dilemmas

Independent and excellent use of: Questioning styles, including effective information gathering. Appropriate levels of eye contact and posture. Excellent active listening. Demonstrates excellent empathy, rapport-building and acknowledgement of emotional responses.

Minimally dependent and above average use of: Questioning styles, including effective information gathering. Appropriate levels of eye contact and posture. Excellent active listening. Demonstrates good empathy, rapport-building and acknowledgement of emotional responses.

With continual guidance a good use of: questioning styles, including effective information gathering. Good levels of eye contact and posture. Good active listening. Demonstrates fair empathy, rapport-building and acknowledgement of emotional responses. With continual guidance communicates effectively with patients, their families. Provides patient education for all ages regarding health problems and health maintenance.

Student despite maximal guidance unable to: use adequate questioning and ineffective information gathering. Poor eye contact and poor posture. Poor active listening. Unable to demonstrate empathy, rapport-building and acknowledgement of emotional responses. Unable to communicate effectively with patients, their families. Unable to provide patient education for all ages regarding health problems and health maintenance. Student despite maximal guidance unable to: consistently communicates with members of the health care team using medical terminology, unable to utilize semantic qualifiers. Unable to consistently recognize and communicate common and important abnormal clinical findings

issues related to culture, race, age, gender, religion, sexual orientation and disability in the delivery of health care. Demonstrates a commitment to high professional and ethical standards. Recognize one's own limitations in knowledge, skills and attitudes and the need for asking for additional consultation. Participates in activities to improve the quality of medical education. Reacts appropriately to difficult situations involving conflicts, nonadherence, and ethical dilemmas

issues related to culture, race, age, gender, religion, sexual orientation and disability in the delivery of health care. Demonstrates a commitment to high professional and ethical standards. Recognizes most limitations in knowledge, skills and attitudes and the need for asking for additional consultation. Participates in activities to improve the quality of medical education. Reacts appropriately to difficult situations involving conflicts, nonadherence, and ethical dilemmas

Communication Skills (Patient)

Independently communicates effectively with patients, their families. Provide patient education for all ages regarding health problems and health maintenance.

With minimal supervision communicates effectively with patients, their families. Provides patient education for all ages regarding health problems and health maintenance.

With continual guidance communicates effectively with patients, their families. Provides patient education for all ages regarding health problems and health maintenance.

Student despite maximal guidance unable to: consistently communicates with members of the health care team using medical terminology, unable to utilize semantic qualifiers. Unable to consistently recognize and communicate common and important abnormal clinical findings

issues related to culture, race, age, gender, religion, sexual orientation and disability in the delivery of health care. Demonstrates a commitment to high professional and ethical standards. Recognize one's own limitations in knowledge, skills and attitudes and the need for asking for additional consultation. Participates in activities to improve the quality of medical education. Reacts appropriately to difficult situations involving conflicts, nonadherence, and ethical dilemmas

issues related to culture, race, age, gender, religion, sexual orientation and disability in the delivery of health care. Demonstrates a commitment to high professional and ethical standards. Recognizes most limitations in knowledge, skills and attitudes and the need for asking for additional consultation. Participates in activities to improve the quality of medical education. Reacts appropriately to difficult situations involving conflicts, nonadherence, and ethical dilemmas

Communication Skills (Healthcare Team)

Highly effectively communicates with members of the health care team using medical terminology, utilizing semantic qualifiers. Recognizes and communicates common and important abnormal clinical findings

Minimally dependent with above average communication skills with members of the health care team using medical terminology, utilizing semantic qualifiers. Recognizes and communicates common and important abnormal clinical findings

With continual guidance a good use of communication skills with members of the health care team using medical terminology, utilizing semantic qualifiers. Recognizes and communicates common and important abnormal clinical findings

Appendix M: Policy on Non-Fraternization Relationships

Policy on Non-Fraternization Relationships

St. George's University Policy on Non-Fraternization Relationships between individuals in inherently unequal positions may undermine the perceived integrity of the supervision and evaluation process, as well as affect the trust

inherent in the educational environment. It is the policy of the University that respect for the individual in the University community requires that amorous or sexual relationships not be conducted by persons in unequal positions. The University considers it inappropriate for any member of the faculty (including clinical tutors), administration, or staff to establish an intimate relationship with a student, subordinate, or colleague upon whose academic or work performance he or she will be required to make professional judgments or who may have real or perceived authority over the student. The University considers it a violation of this policy for any member of the faculty, administration, or staff to offer or request sexual favors, make sexual advances, or engage in sexual conduct, consensual or otherwise, with a person who is:

- Enrolled in a class taught by the faculty member or administrator
- Receiving academic advising or mentoring from the faculty member or administrator
- Working for the faculty member, administrator or staff
- Subject to any form of evaluation by the faculty member, administrator or staff.

Please note that the list above is not exhaustive and other situations of fraternization may also result in a violation of this policy. In all such circumstances, consent may not be considered a defense against a charge or fraternization in any proceeding conducted under this policy. The determination of what constitutes sexual harassment depends on the specific facts and the context within which the conduct occurs. Teaching and research fellows, doctoral and graduate assistants, tutors, interns, and any other students who perform work-related functions for the University are also subject to this policy. In the case of a pre-existing relationship between a faculty member and a student or subordinate, the faculty member has an affirmative duty to disclose this relationship to the Dean's Office so that any potential conflicts of interest can be resolved.

Appendix N: Diversity and Inclusion Policy

Diversity and Inclusion Policy

At St. George's University School of Medicine (SGUSOM), diversity is a foundational core value

that is reflected in our campus community. We recognize that the educational environment is enhanced and enriched by a true blend of voices and knowledge from varied backgrounds and attributes. The University is committed not only to the recruitment of students, faculty, and staff from varied backgrounds and experiences, but also to developing initiatives designed to create an equitable and inclusive campus environment. We embrace the belief that a diverse, equitable, and inclusive environment is pivotal in the provision of the highest quality education, research, and health care delivery.

Through our pursuit of Diversity and Inclusion, SGUSOM prioritizes quality, positive student experiences irrespective of background. SGUSOM aims to create an environment where all students, faculty and staff, regardless of background, feel safe and free to contribute to the development of the SGUSOM community. SGUSOM aims to establish a culture of diversity, equality and inclusion.

SGUSOM is committed to anti-discrimination and does not discriminate as defined by applicable laws and regulations in those countries where its students participate in its educational program.

SGUSOM utilizes a variety of strategies to achieve its mission through a commitment to diversity, equity, and inclusion in its students, faculty, and staff.

Appendix O: Nondiscrimination Policy

St. George's University Nondiscrimination Policy

It is the policy of St. George's University to provide an educational and working environment that provides equal opportunity to all members of the University community. The University prohibits unlawful discrimination, as defined by applicable laws and regulations in those countries where its students participate in

its educational program, including harassment, on the basis of race, color, religion, national origin, citizenship, gender, pregnancy, age, disability, veteran status, citizenship, and genetic information. The University also prohibits discrimination on the basis of, sexual orientation, gender identity, and gender expression.

Inquiries regarding this policy may be directed to the Office of the Dean of Students at dos@sgu.edu.

This policy provides information regarding the University's prevention and education efforts related to discrimination and harassment. The policy also explains how the University will proceed once it is made aware of the allegations of prohibited conduct in keeping with the University's values and other applicable laws.

This policy applies to visitors, applicants for admission to or employment with the University, students, and employees of the University who allege discrimination by University employees, students, or visitors.
